ACKNOWLEDGEMENT

First I express our heartiest thanks and gratefulness to almighty God for His divine blessing makes me possible to complete the final year project successfully.

I really grateful and wish my profound my indebtedness to **Shaon Bhatta Shuvo, Senior Lecturer** Department of CSE Daffodil International University, Dhaka. Deep Knowledge & keen interest of my supervisor in the field of “*Web Based Application* ” to carry out this project. His endless patience ,scholarly guidance ,continual encouragement , constant and energetic supervision, constructive criticism , valuable advice ,reading many inferior draft and correcting them at all stage have made it possible to complete this project.

I would like to express my heartiest gratitude to Dr Syed Akhter Hossain ,Professor, and Head, Department of CSE, for his kind help to finish my project and also to other faculty member and the staff of CSE department of Daffodil International University.

I would like to thank my entire course mate in Daffodil International University, who took part in this discuss while completing the course work.

Finally, must acknowledge with due respect the constant support and patients of my parents.

ABSTRACT

In modern age computer is very important system in our daily life. In this project people makes their life easy by using online shopping e-commerce website. The craft-to-purchaser part of electronic exchange (web based craft) is in most obvious craft utilization of the Internet. The fundamental goal of a e-commerce website to sell the products and undertakings to the web. This errand oversees building up a web based business webpage to the internet shopping. It furnishes clients with an estimate of various items accessible for buy in the shop. So as to encourage internet buy a shopping basket is given to the consumer. The method is executed utilizing three methodologies, with a previous database connection, a middle level apache server and a web program as the front end client. So as to create web based marketing application use html tag, css tag, java knowledge, server side script language PHP language and social database connection database in My SQL. This could be an undertaking with the target to build up a fundamental site where customer is given a marketing behind petition and consider to thinking of the advances used to become could be a petition.

CHAPTER 1

Introduction

1.1 Introduction

Shopping is preferred by everyone, now shopping is in our hands. We can order any product at home if we want. So we are no more shopping malls that are more interested in buying any products at home. On the other hand, it can be considered commercially. A customer can register online and buy any product he needs. After registering as a vendor, he can sell any necessary product for his profit. Any buyer or seller in online shopping can buy a new product or buy a new product, excluding its previous product. A buyer can search online for his needs online so that he does not have to give more time, one does not need all his products, he can find out that it is very easy to find out. Because of the lack of proper use of the security system, people are losing their trust in buying products online. So, new and also the vendors should make the security system work more efficiently in front of people. So that people can sell their own essential goods and sell them with confidence. In many cases, they cannot find the accessories they need, so the vendors should be aware that any product that buyers find and buy easily. So the vendors should keep in store a product that requires customers and that is what the customers want.

1.2 Objectives

The purpose of the online system of marketing structures is to extend the reason for customers of his own choice, declared the time is used to marketing and capability of obtaining things. This website is a special feature a buyer can also act as a seller.

- To develop a straightforward technique to use electronic systems where the customers can search for thing see to rundown of thing of solicitation it going apart to publicize.
- The looking for thing should be possible symptom class, maker similarly as latest thing, see it Purchases brick bake a favorable course for the users.

- An User can add thing to truck to purchases, delete of the thing from items beforehand picking of Last Narrations
- An user is to see the absolute specific thing with many of pictures of he want and Moreover Observe the Customer reviews the total thing.
- It limits the marketing time of customer, increase the reason for his choice.

1.3 Motivation

The motivation behind this project is very big. This online shopping system is not a process for buying system but also is a platform of a company where many item is store their business activity in a single application. That is why customers can buy products from the same place according to their needs. This keeps the customers away for a long time. It is a very easy ordering system for any person.

1.4 Expected Outcome

People save so many times by booking online product. People also know about his vendor option. If he knows that, he can work as a seller .People can see the product list. There are many different types of items in the Hoichoi store, People can choose item from the product list.

1.4 Report Layout

Chapter 1:Introduction

In this section I have to conversations about the inspiration, goals and the normal result of the task.

Chapter 2: Background

I discuss about the introduction of the background. I also discussed about the involved work, correlation with other hopeful system, the extent of the issue and difficulties of the undertaking challenges .

Chapter 3: Requirement Specification

This chapter showing that all of the requirement analysis, such as: customer requirements, data requirement, process requirement, the use case model and the description of the project , the use case diagram for customer , data flow diagram of the project and also the design is needed for the projects.

Chapter 4: Design Specification

Details all the design of this projects are discusses in this chapter. There are customer interface design, customer login and registration page design, also add, check ,payment method design, Admin Vendor page interface design, and the effectuation requirement.

Chapter 5: The Design of Implementation and Testing

This chapter objects and the implementation of database and also testing method describe.

Chapter 6: The Conclusion and the Future purpose of this projects

I discussed about the perfection and the future requirements purpose about the program.

CHAPTER 2

Background

2.1 Background Introduction

In this modern days people are now online dependent. People buy their shopping like; laptop, camera, mobile via online. By my web application people can buy their requirement product. They can get better select system in this application named “hoichoi.com”. They can view the available product and they also can also edit or delete product from the select item.

2.2 Related Works

There are same related work like www.daraz.com but I tried to add more necessary step to human needs.

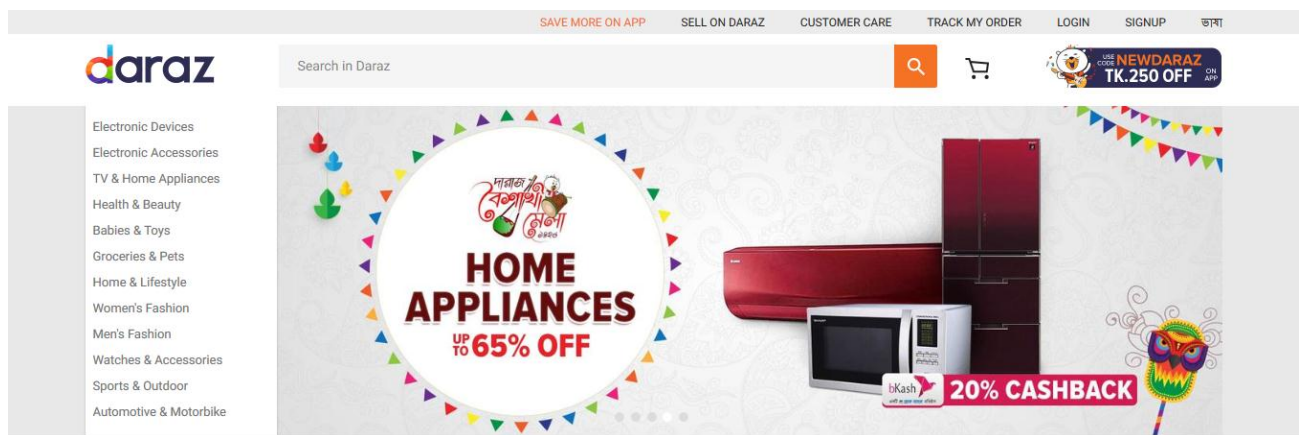

Figure: 2.1 daraz.com homepage

2.3 Comparative Studies

Most of available web applications of Online Shopping have few item are available. People can't buy all product like they want. In this application I try to add all product which is our need. There is some other applications like my but my application is easy to use. So that people can buy their product safely and easily.

2.4 Scope of the Problem

2.4.1 Customer portal:

2.4.1.1 Online determination

Customer have to must registered to buy a production the online marketing .

2.4.1.2 View Product: Customer can consider thing to be per class, maker and latest thing. Select the things to truck, moreover can uproot from truck in past positive settlement, he could be manner see thing nuances, shipping information and esteem that infers all in receipt.

2.4.1.3 Shipping Information

Customer need to give the item conveyance area.

2.4.1.4 Vendor panel

a buyer can also act as a seller.

2.4.1.5 The Payment Process

Customer can choose the installment strategy what is simple for him for installment the expense

2.4.2 Admin portal:

2.4.2.1 Category

Administrator can include class, see, distribute, unpublished, alter and erase classification.

2.4.2.2 Manufacturer

Administrator can include producer, see, distribute, unpublished, alter Manufacturer and also delete manufacturer.

2.4.2.3 Product

Administrator can include item, see, distribute, unpublished, alter manufacturer and delete item.

2.4.2.4 Product settlement status

Administrator should be refresh selling item status.

2.4.2.5 Favor from vendor and admin science

The following are the advantage of the admin saw are:

- Serves should to effective administration of the organization
- Simple of the deal with in to entire framework.
- Time swelling and give away better result.
- Administrator can distribute or unpolished the classification thus it won't appear from client finish for these item class not be accessible, and distributed the item those accessible.
- Same application can be utilized for various web based marketing reason.

2.4.3 System admin portal

System administrator accepts organization demand. Including and refreshing the goal, calendar and client detail. Refreshing organization status and producing different categories report.

2.5 Challenges

- ☐ Initially, my application should build up properly.
- ☐ To reach features of the system into the peoples.
- ☐ To Add necessary product which is people need.
- ☐ To develop security system for all customer ,vendor and administrator.
- ☐ Try to develop the system for all of the customer can vi

CHAPTER 3

Requirement Specification

3.1 Requirement Planning and Management

In the target of the Request is most easier to use and the other thing is give a wise system , expansive ask about would have been done for get a learning of its necessities on practices of different types of customers. In the process of the request is making more user friendly to use for the finishing customer. In the case of online marketing structures there are two social affairs that coordinate with into the process, Some of the users are needs to purchase thing. In the other of the structure programmer could process the system. A conventional electronic web based shopping structure must be demonstrate to going with components for the users for their delicious analysis.

3.2 Purchaser Requirements

- Knowing when a thing needs to spare not extra in the marketing basket.
- Restoring the different parts of the site in the site of add to a thing to the marketingcart.
- Basic sifting and choosing things in the rundown.
- Successful all of the institution of the items.
- Straightforward route from point of arrival to information and adoration joins for express things.
- Evident marketing connections or gets the things
- Predictable art of item data set.
- A proficient web boundary to fill in as manager with the objective that couldbe manages all the piece of the system properly.

3.3DataRequirements

- A purchaser can see the item appropriately yet to buying he want to needs to include the item in marketing product, for this he needs to enlist or need to login in case he is a present user.

- To dispatch the system, administrator needs to choose the class of thing, association or producer of thing Will remain in the structure for purchaser view and he can pick those from his board.
- From purchaser part or when a purchaser demands from his part can manage the request to the Thing.
- A Head can be include making of thing, see creator, delete creator, and update maker and its status Those are not available in store as unpublished.
- A Head can include thing, see thing, and delete thing, update thing and its status those are not Available in shop as unpublished.
- Manager can include class of thing, delete, see, update thing and its status those are not open in shop to offer or not to show to purchaser.
- Another imperative factor in the arrangement of the item that the feedback. The natural cycle between a utilization and site in not complete until the responds to a request by the purchaser.

3.4 Process Requirements

To play out any frameworks have to some particular validation usefulness. The accompanying procedure Prerequisites are distinguished for the excellence execution to the framework:

- A conclusive administrator client is expected to get to the data of to the framework to appear the administrator.
- A conclusive client ID has been must needed the client to purchase for item.
- Administrator login system for framework can see, alter, remove and restore class, maker what's more, item Related data. Likewise he can refresh the request data
- Client can add item to truck just when he is play a register role to the client to the framework, alongside need to view to the framework generally not ready to add item to the truck

3.5 Use Case Outline

A outline of a use case is a strategy use for in the framework research to recognize, clear all, it sort out of the frame necessities. The use case is compromise of a lot of possible groups divide in of correspondences around structures and users in a particular circumstance and similar to a particular goal. It contains a social occasion of segments (for example, dividing classes and documents) that could have been used together such that will have been an effective to greater the aggregate of the diverse segmentations in solidified. The usage should be documented for all structure practices have to importance in the necessary to the customers. A usage is should have been as an aggregation of most provably circumstances similar to a particular target, no doubt, the utilization of the systems future plan are now and again seen as synonymous. In this use case diagram of Web based Marketing administrator can add, delete, alter and saw the Classification, Maker and the Item just as administrator can payer with every person. Likewise Administrator can over request these are mentioned by the purchaser, and can be change the positions.

Pre-wanted: Should have to added product to cart

Elementary Way: Should be Click to the update button

Incident No: 08

Incident Name: Added the Shipping documents

Actor :purchaser

Pre-wanted: Necessary to Check out the button

Elementary Way : Purchase Shipping knowledge and click to submit button

3.7 Data Flow Diagram (DFD)

An information system of chart (DFD) is a graphical of information of an knowledge system, displaying its methodology viewpoints. A Data Flow Diagram is routinely use in a ground work in advance to make a diagram to the pattern , which would have been introduced in later.

3.7.1Context elevation Diagram

Setting elevation outline simply demonstrate of errand occurring in the entire framework, it's really demonstrates the input what is the output for the info.

Figure: 3.3 context elevation diagram

3.7.2 First elevation DFD

The First dimension of the diagram demonstrates the real advances it can be need to finish to purchase an item. At first client visit the site, look through the item by class, maker and top selling demonstrate the subtleties of the item, select installment strategy, at last the item conveyed by the organization specialist.,

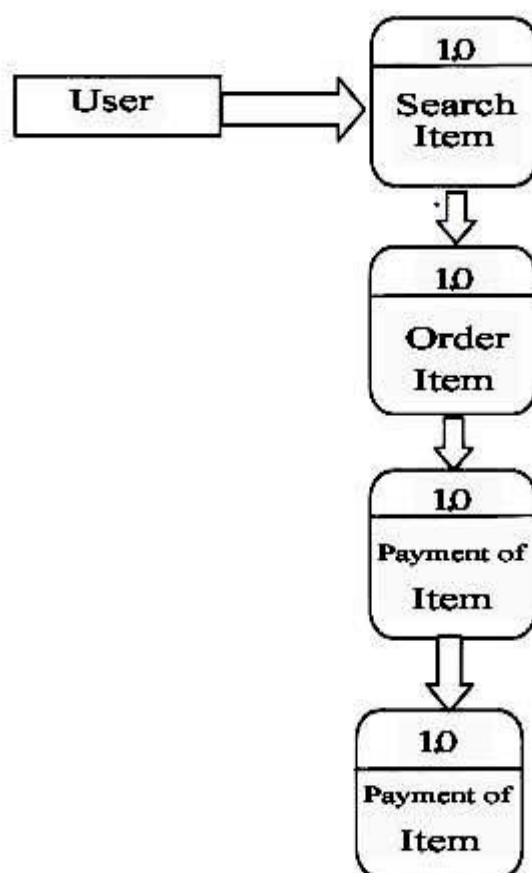

Figure: 3.4 first elevation of data flow diagram

3.7.3 Second elevation DFD

Second elevation of the diagram display the whole system that happen in the process. It is displaying given below:

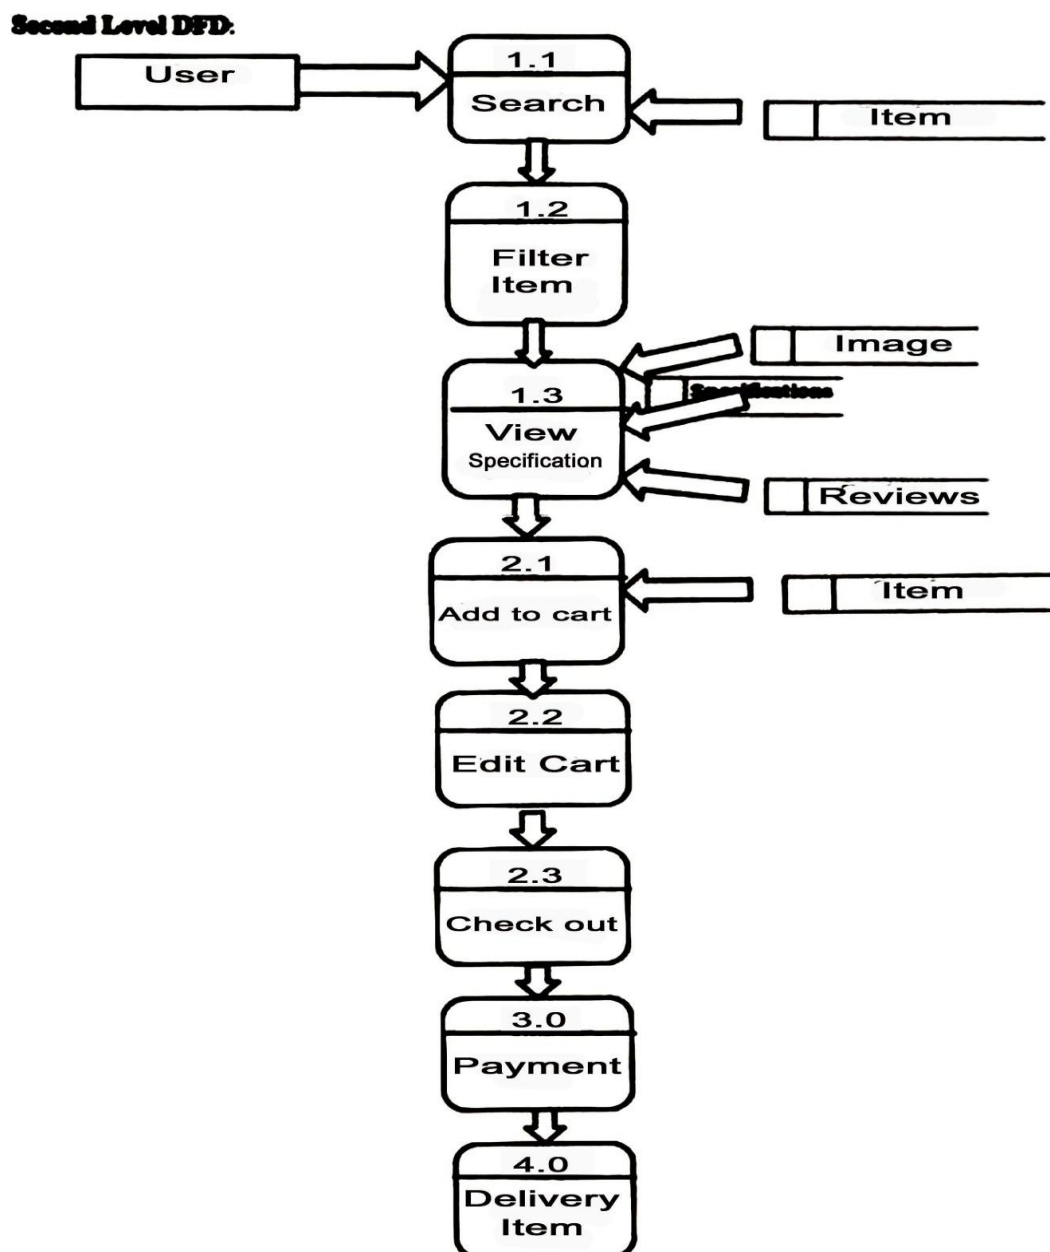

Figure: 3.5 second elevation of data flow diagram

CHAPTER 4

DESIGN SPECIFICATION

4.1 Client Interface Design

4.1.1 Starting page

A Starting page is a site page that fills in as the start page which is already declared .It is the default site page that piles to visit the web page. The landing page is arranged in the top inventory of the site. Many of the web server empower the landing page to the couple of a particular filenames. Points of reference fuse index dot html, index dot php, default dot html, and home dot html. The unseen filename of a site's landing page could have been revamped on important servers. Since the landing page record is stacked therefore from the root vault, the landing page URL does not have to fuse the filename. There is no standard landing page format; anyway most home pages consolidate a course bar that offers interfaces with different sections inside the site. Other typical segments found on a landing page join an interest, documentation about the site, likewise, continuous news or updates. A couple of locales join documentation that changed to regular day. For point of reference, the Articulations greeting page joins a step by step test and to develop knowledge a term of the particular day. landing page of marketing of the system fully such immense quantities of part of the structure of the underneath.

- Top Selling item : Top of the home page should have been displaying the top of the buying items.
- Structure: landing page incorporate struts as indicated by classification of item, and client can look Through the item as indicated by classification of item the client required.
- Cart: Client can see the items he included his Cart
- Make Record: The client has no record can enroll from this page.
- Most recent item that additional as of late appearing the landing page right of the part likewise the center of the landing page.

- In down of the landing page client could have see the item as indicated by the producer.
- In the center piece of the landing page appearing current advancement or offer running.
- Base of this page appearing, Help to and also Mainstream menu. Well known menu will be appear the most recent item, Help for the contact and Record for registering or existing client

Starting Page view is display in figure it below

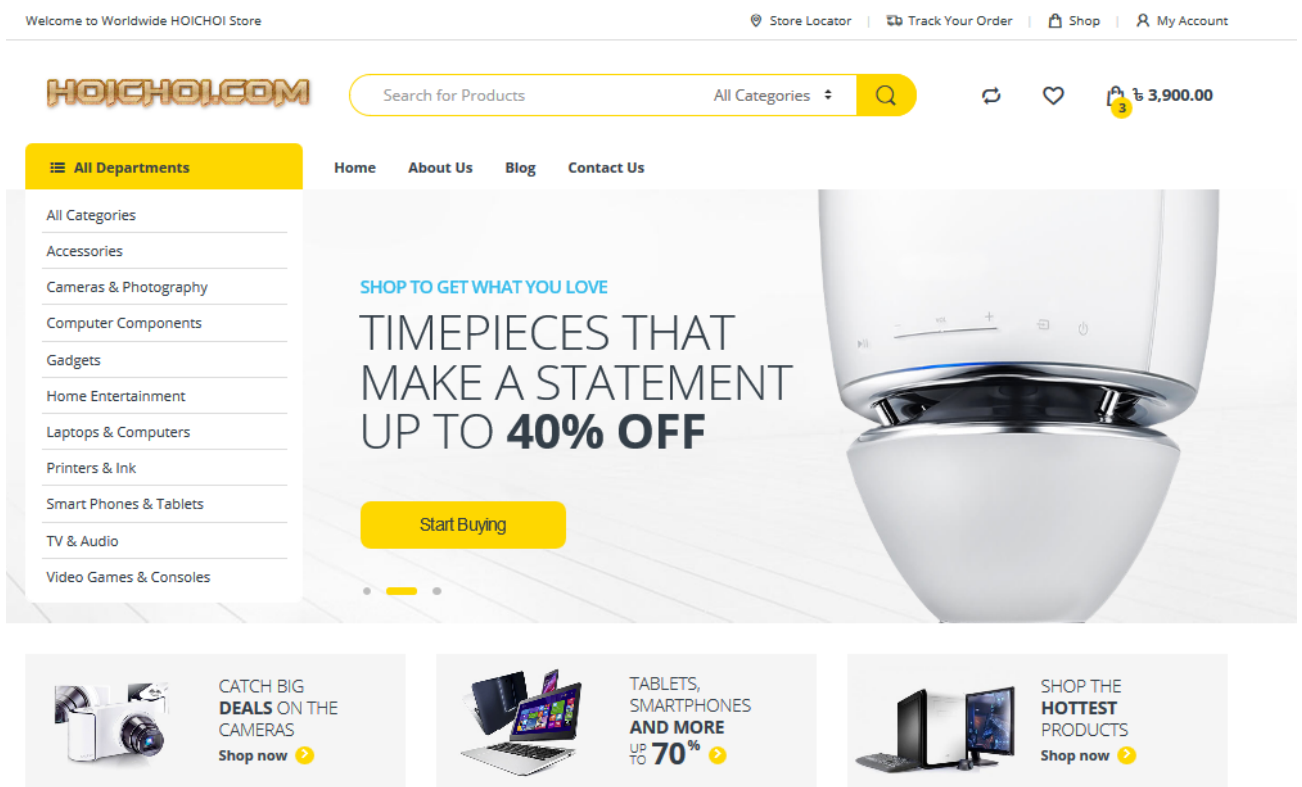

Figure: 4.1 home page

4.1.2 Client login and the registration page

Client must need to login before including item in truck. In this page customer have login to purchase item and new of customer have make a record for purchasing the item. Figure of customer login, registration page given the below:

CHAPTER 5

Design Implementation and Testing

5.1 Introduction of an Implementation

There are number of programming instruments to create and execute of the electronic on the web Marketing framework, I have picked these are the open source, with the future plan is to be that it should have been the creating price of the undertaking. In the structuring of the venture html, css, java script, php for creating the framework unique. MySQL as database server. The main part of the things are the tools are open source.

5.1.1 HTML Tags

In the used of html maintain for plan the formation. Everybody know that the html is a markup language to want the server records, We use it to making the Hyper Markup Language, a markup language is a great trade of markup tags.html records are portrayed by html names. Each html tag portrays phenomenal report content. Html utilized on the used that :

- Simple way to learning.
- Simple way to utilize.
- Upheld to all the program.
- low price to taking it .

5.1.2 CSS

CSS represents Falling Templates which is a template language used to depict the introduction semantics of recording writing in markup language. To control the style of a web archive CSS is a simple way.

5.1.3Java Script

JavaScript is a dynamic, abnormal state programming language which makes a website page increasingly intelligent and easy to understand.

5.1.4 PHP

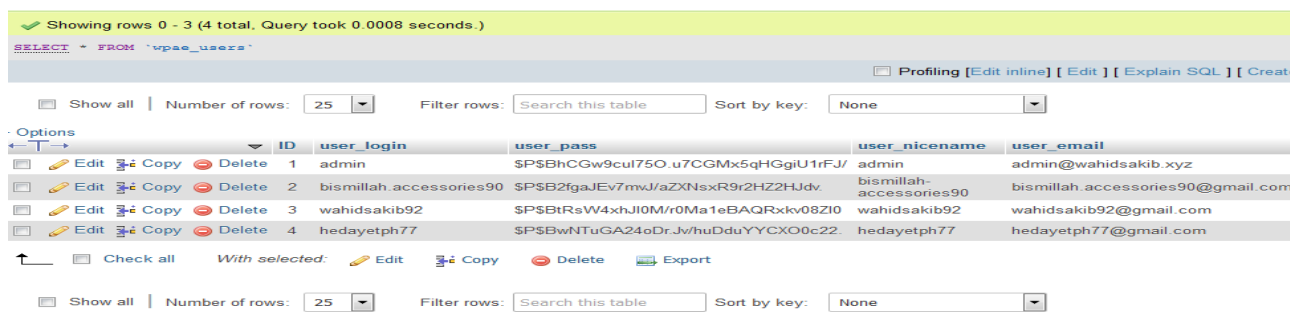

In this task making the site page content dynamic and for interconnecting with database coding done by PHP. PHP details for Hypertext Preprocessor. The reason of utilizing PHP are:

- Php should have create dynamic page content.
- Php should have make, open, read, compose, erase, and close records on the server.
- Php should have gather structure information.
- Php should have send and get treats.
- Php should have include, erase, and change information in database.
- Php should have utilized to control client get to.
- Php should have scramble information.

5.1.5 My SQL

A database can set framework (DBMS) programming for make sure and Initial to set value of the databases. The DBMS shows the clients and developers an order the method to make, recover, update and overseeing information. In our application we utilized MySQL.

My SQL is the most user free open source database the executives framework. MySQL is a standing for the best RDBMS being usefull for creating electronic programming applications. We are utilize mysql as database in our proposed framework. It's savvy. There is no uncertainty that Prophet make marvelous database yet the cost included will be restrictive for some MySQL is free. It very well may be introduced and utilized however pay nothing all the while. Presently we have demonstrated our undertaking back-end database table in below:

ID	user_login	user_pass	user_nicename	user_email

5.2 The Testing analysis

Careful test to the endeavor are silly. Some testes approaches and its set up the organized physically. In this endeavor two testing are picked Black box and White box testing. Those testing are apply for various piece of venture.

5.2.1 The Black box testing

Black Box Testing, otherwise called Social Testing, Any one can test the method structure/plan/execution of the thing being tried isn't known to the analyzer. These tests can be utilitarian or non-practical, however typically useful. This technique is used any one of the

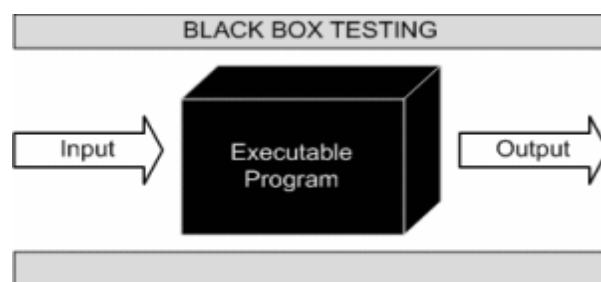

Figure: 5.10 black box testing

Programming , according to the analyzer, resembles a black box; inside which one can't see. This strategy endeavors to discover blunders in the accompanying classifications:

- Mistaken or missing capacities
- Interface blunders
- Blunders in information structures or outer database get to
- Conduct or execution mistakes
- Instatement and end mistakes

5.2.2 The White Box Testing

White Box Testing generally called Clear Box Testing, Open Box Testing, Glass Box Testing, Direct Box Testing, Code-Based Testing or Assistant Testing is an item testing strategy in which within structure/plan/execution of the thing being attempted is known to the analyzer. The analyzer picks commitments to rehearse courses through the code and chooses the fitting yields. Programming know-how and the execution learning is basic. White box testing will attempt past the UI. The white box testing perform customarily in this undertaking of distinction place.

CHAPTER 6

CONCLUTION AND FUTURE SCOPE

6.1 CONCLUSION

The Web has been turned into a now a days asset in present day business, in this way internet shopping has more comfortable for the business man who have to earn in his site also the clients for their buying. For the businessman, web shopping makes another business openings and for the customer, it makes the close shopping possible. An awesome being shopping bushel setup must be ran with simple to utilize shopping crate application sensible. It should be useful for the customer to see the substance s of their truck and to have the ability to clear or add things to their truck. The shopping truck application depicted in this endeavor gives an amounts of features that are proposed to make the customer logically pleasant. This endeavor helps in understanding the generation of a keen site page and advances customer to realize it. Over the span of the task, I have to over the extensive assortment of the issues and also the challenges. We have been taken to the suitable complex working back to the dynamic site, how he does information control can be happened in some cases however we have done everything.

Effectively, the framework has been planned because of the framework examination. All conceivable blunder in the program have been killed. Important approval methods have been utilized and typical, strange and amazingly information was utilized to test the framework. Be that as it may, doing this venture has been a decent lift to our certainty as the future IT individual from our worldwide town.

6.2 FUTURE PURPOSE

I want to develop this system in such a way that people can easily buy and sell. I want to develop a security system in such a way that people can trust my site. I'm going to try for the launch of e-mail or SMS system during the purchase of a customer or vendor and also verification system for security. It will be Helpful for all. I am try develop this site also for the village.
