ACKNOWLEDGEMENT

First we express our heartiest thanks and gratefulness to almighty God for His divine blessing makes us possible to complete the final year project/internship successfully.

We really grateful and wish our profound our indebtedness to **Ms. Nusrat Jahan, Sr. Lecturer**, Department of CSE Daffodil International University, Dhaka. Deep Knowledge & keen interest of our supervisor in the field of “**Web Development**” to carry out this project. His endless patience ,scholarly guidance ,continual encouragement , constant and energetic supervision, constructive criticism , valuable advice ,reading many inferior draft and correcting them at all stage have made it possible to complete this project.

We would like to express our heartiest gratitude to **Dr. Syed Akhter Hossain professor and Head, Department of CSE**, for his kind help to finish our project and also to other faculty member and the staff of CSE department of Daffodil International University.

I sincerely thank **Imtiaz Ahmed Milon** as his trainer and skilled job. The Daffodil family would like to thank all those who gave me this opportunity to work with him and learn many of the best things in my life. Also, I got a lot of people who helped me a lot in the formation. I truly thank all those who helped me unconditionally.

Finally, we must acknowledge with due respect the constant support and patients of our parents.

ABSTRACT

An internship as a “**WEB APPLICATION DESIGN AND DEVELOPMENT IN PHP**”, is now one of the great aspects of a computer professional career. This internship report is for finishing my BSc. Daffodil International University in Computer Science, Improving and utilizing the knowledge gained during my studies. The main goal of this internship was web design and development. There are many programming languages to develop a web-based application or software. I have joined skill jobs training institute and technology and there I have learned all kind of official manner, communication with a colleague, how to perform duties etc. Some of language is only used for the frontend and backend design of the software. For example- HTML, CSS, JS, PHP and WordPress among various web technology are some programming language develop the frontend of an application. PHP, Java scripts, SQL Bootstrap Framework etc. are used at the backend. Nowadays frameworks are basically structured programming by using model, view and controller which is also called MVC. This internship The report contained all the details related to web design and development and all the details of my experiences during my entire internship.

CHEPTER 1

INTRODUCTION

1.1 Introduction

It's known that internships get experiences from various organizations that will greatly help to establish a relation in theoretical knowledge and practical knowledge. Add valuable experience such as running an office or computer equipment, managing situations at the same time, organizing and analyzing data, budgeting and improving work, writing, speaking as well as software development with systems development life cycle (SDLC). It's important to understand how to communicate to supervisors, peers and strangers. Obtain a good knowledge of computer programming including the design and development of Web applications. The internship was about front desk work experience with the modern web technologies from the very first or the scratch such as HTML, CSS, PHP, LARAVEL and other languages and an introduction to web based application development with the demand of current age and the client satisfaction. This internship will involve dynamic and challenging opportunities and help to trace the best career. This is a great opportunity to gain hands on hands experience on web application development and step to the first stair in huge ERP or Application Development.

1.2 Motivation

An Internship can add practical experience in real life programming and software development life cycle. It is very important to know the theoretical knowledge and apply it in real world in order to increase our experience in the labor market in the software engineering sector. The respect of all the rules and regulations of the company during my intern period it helps me to become professional in my job. The internship competency helps me meet the challenge of the current job market. To become a full stack website Developer. There are lots of opportunity in web development area. Easy to learn compare to other language. I worked with an internship program to develop myself for creating the best career as a web application developer or a web programmer. I believe that this career is the most powerful career. Again this job has a super dynamic environment that will help me to grow more in the next decade and will help me to create a start-up. They helped me and the other employee in learning new technologies, strategies and various idea those will help for the growth of any company and the best team. Again that may help Seeking for a challenging and creative job in a dynamic and a

better work place where I can use my strong technical knowledge and skills.I hope this internship will provide me the perfect opportunity for my future career.

1.3 Internships Objective

Understand the concept and structure of web application design and development. Observe interpersonal and organizational dynamics. Possibilities of technical skills.Increase communication skills. Requirement Collections and Implementing. Project Testing, Bug hunting and Client Handling. Know all kinds of official knowledge and polices. create a unique and dynamic website. Create the frontend design of the website using HTML, CSS.Represent the frontend design dynamically site using PHP and Laravel framework. I've gained the knowledge about web technology and a major area of web programming languages. There was a perception that was the importance of the websites and mobile applications for the Institutions, Businesses, Brandings, Personals,Spreading the News, Discussions, Communication and the other purposes is so much what is hard to describe in words. I've experienced on the office environment for express my career in the future. I realized the strength of team work. That internship increased my sense and responsibility and good work habits maintaining the time line. Now I can implement my innovative ideas, skills and creativity for develop my career in the best job sector in the world.

1.4 Introduction to the Company

Skill.jobs.Limited

Skill.Jobs originated from JobsBD. The global job market is based on our past 20+ experiences, especially the latest work trends, skills metrics, technological advances, modern company needs and expectations.com, Bangladesh's first job portal and later only. The idea was to make our position more unique and specific as we worked. To express the attention of the companies and to pay more attention to the patterns of its services Skilled Jobs has been named for Shaw. Further steps of being one of the best IT.

Skilled Jobs will prepare job seekers for the relevant industry by enhancing and developing the skills of job seekers, bringing opportunities for job seekers and acting as advocates for them in the HR world. Skills Jobs has started its operations simultaneously in Bangladesh and Malaysia and will soon it's going to start same in Australia UK and UAE. On the other hand, Skill Jobs will make the job easier and simpler by helping job seekers find the right candidate with the necessary

skills rather than forwarding a huge database. Skills.Jobs will provide necessary training to the employees of various organizations and corporate organizations. The founder of skill jobs is Dr. Md. Sabur Khan. Skills jobs is an Institute at Daffodil International University. We name skills jobs as a service provider that builds a bridge between skilled candidates and employers. Skills.Jobs will monitor trends and provide both hands-on training and online training to prepare students, new graduates and job seekers at all levels for future jobs and careers.

Vision

Skilled Jobs is one of the best IT companies in Bangladesh and skilled programmer and IT engineer through training. Skills.Jobs will keep an eye on trends and provide both hands-on training and online training to prepare students, new graduates and job seekers of all levels for future jobs and careers. Skilled.Jobs builds a bridge between skilled candidates and employers as skilled service providers. Skills.Jobs will provide necessary training to the employees of various organizations and corporate organizations.

1.5 Report Layout

A report design is an archive that goes about as a format or visual that characterizes the standpoint of a report. A report format will normally utilize tables to organize content, where the report contains information fields, content or picture.

I try to present my work in different chapters for this, I did at the beginning, introduce the introduction, the motivation, the purpose of the practices, Objectives of the practices, the details and the design of the company. Then present the Organization market situation and product, organizational structure and challenges. After that, I showed the project that I developed in this internship.

And I'm writing about how to implement other tasks after a task and I'm trying to highlight the abstracts I faced in this project. And I also talked more about my future work, what I learned, how I could use it in the future, and how much more I knew. Finally, I am able to done real client projects.

CHAPTER 2

ORGANIZATION

2.1 Introduction

During my university years I found Different perspective of modern technology that I can chose to work with.

One of them is Web Application Development. Then I got a workplace on this topic in Skill.jobs Limited. Here I learned how to be a professional Web developer; I learned all those things I needed to do a job.

Competition in everything that happens in the modern world, in the case of technology, does not wait that's why technology is improving day by day. To work with technology, there are many professional skills, what the Skill.jobs Limited taught me. I learned HTML5, CSS3, Bootstrap, JavaScript, JQUERY, PHP, MYSQL, LARAVEL and many more with which I can improve the application.

Finally, I can say that it helped me to become an expert Web Developer So I sincerely thank my university and the Skill.jobs Limited for this opportunities.

Skill.jobs Limited has given the best IT services like Web Development, Mobile Application Development, Game Development, ERP,CRM, POS, E-Commerce Solution, IOT, Domain-Hosting Service, ICT training.skill.jobs has the first and only theme market place in Bangladesh.

2.2 Product and Market Situation

- Python for Data Science and Machine Learning
- Real Life Advanced Digital Marketing
- 100% ICT Scholarship for Generation
- Online Outsourcing with Digital Marketing
- Real Life Web Application Development on Java

- Graphics Design with short course
- CCNA
- Real Life Web Design & Development on PHP (Laravel Framework)
- English for Communication (IELTS)
- Online Outsourcing with Digital Marketing
- Advanced Excel
- Real Life Web Application Development on Java
- Real Life Web Application Development on Java

2.2.2 Market Situations

Skill.jobs has created the most valuable market situations for their fair and fast services with reliable costing. Popular-IT gives the services of various training of Computer. And in this present age this has a lot of possibilities among the modern business competitions. Again the training of ICT such as Web Design, Web Development, Graphic Design, Logo Design, Lead Generations, SEO, Server Management and Trendiest ICT service Print on Demand.

2.3 TARGET GROUP

By rapidly changing the world, every organization and company must develop computer and technology skills to remain competitive and successful. IT infrastructure with digital service facilities should be appropriate for all office segments and the skills of all professionals in all business, industry and service sectors. To meet their goals Venus It Ltd moving forward with the right initiatives. Skill.jobs Limited vision is to bring happiness to customers and employees.

2.4 SWOT Analysis

SWOT responds to strengths, weaknesses, opportunities and threats. The SWOT analysis aims to identify the main internal and external factors that all factors consider important to achieve a goal.

Figure 2.4.1: SWOT Analysis

Strengths

- The company has stability to make difference comparing other IT company.
- Best server and hosting providing.
- Best ICT training in the city.
- Print on demand services for the first time and only in Bangladesh.
- Best web design and development Services following the new trend.
- Best mobile applications services.
- First themes market place in the country.
- Fair and reliable services.

WEAKNESS

- Try To avoid Upgrade Applications.
- Communication Gap between Software Team and Project Support Team.

Opportunities

- Print on demand services for the first time in Bangladesh.
- Making a difference for the Bangladesh with Themes Bazar like Envatomarket.
- Opponents aren't able to run with its service area.
- Working with the trendy technology can bring more satisfactions.
- People are tensed with fair service but skill,jobs ensures that.
- Themes Bazar can make a vast employment area in the next decade.

Threats

- Working with new technology needs to make new team learning.
- New technologies create the hard problem sometimes to solve.
- Some companies are working hard to reach the point.

2.5 Organizational Structure

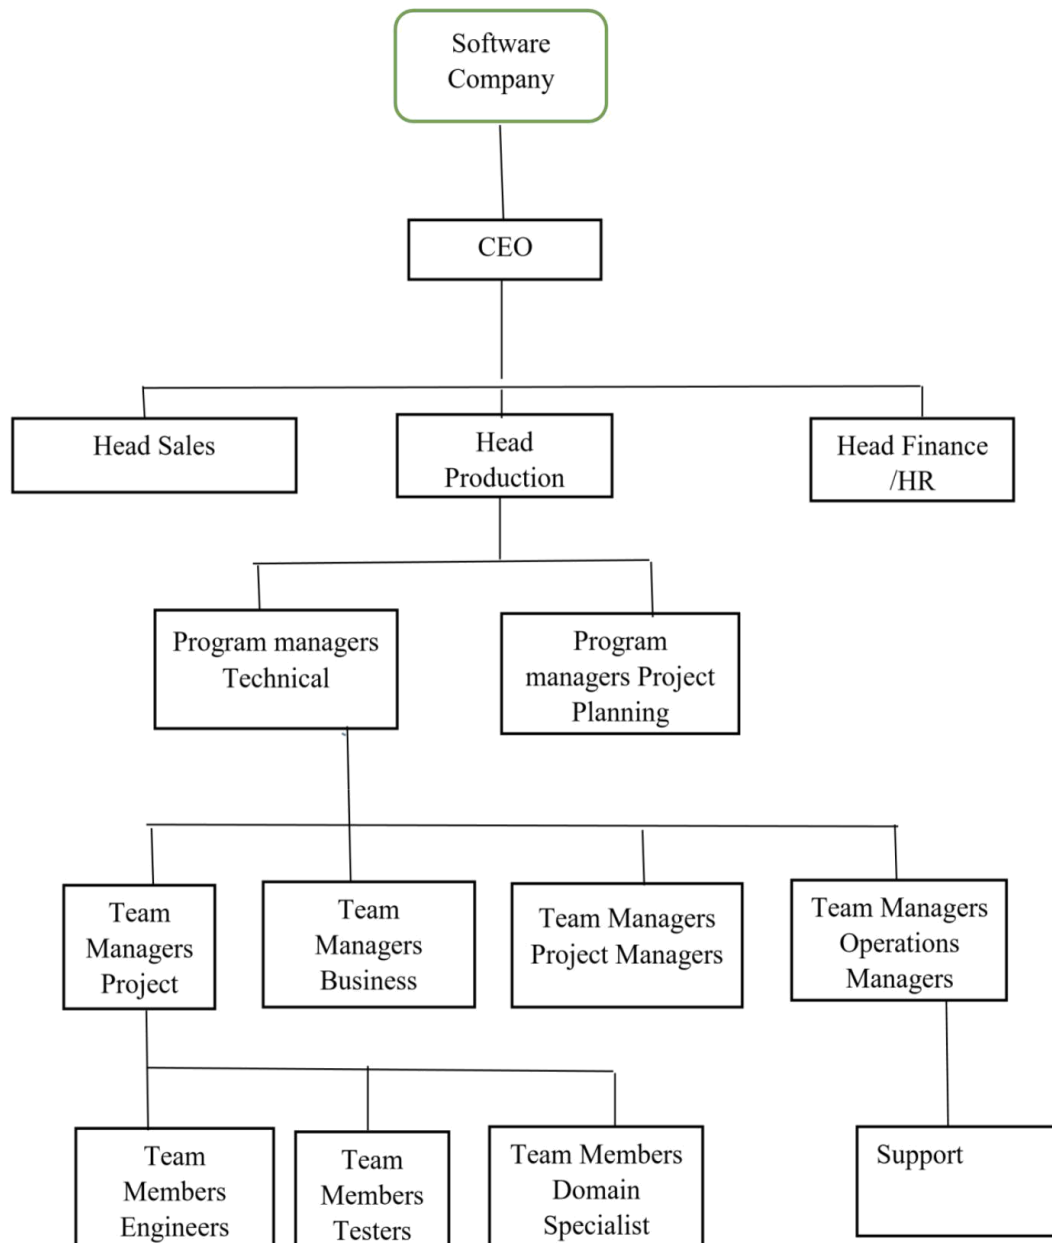

Figure 2.5.1 Organizational Structure of Skill.jobs Limited Company

CHAPTER 3

Tasks, Projects and Activities

3.1 Daily Task and Activities

- Training starts at 09.30 am and ends at 06.00 pm regularly 6 days in a week. In that time period I had many task to do with.
- As a trainee and I regularly completed several types of task Then, I have the opportunity to develop a complete point of sale (POS) for a reputed company
- Starting with basic web site design with HTML5, CSS3, JS and Bootstrap. Tracing the error for the designs and fixing them.
- After 1 month I faced a project of HTML5, CSS3, JS and Bootstrap customization and design of Restaurants web page. After 2 months I had worked with an News paper website of News.com.
- Learning new technologies and new creative and outstanding design continuously.
- Hand to hand experience on big projects and the knowledge of finishing the job maintain by the timeline.

3.2: Events and Activities

This internship helps me to learn the new languages and technologies within a short time. That helped me to make myself well known with the IT event management and other activities within the scheduled timeline. The internship helped me to develop my experience on hand to hand projects and heal me to develop my resume and portfolio.

There was a challenge for every project I developed in my Intern Period. Those challenges were following the timeline, making the outstanding projects, bring the customer satisfaction, Ensuring the no need more revisions on the projects.

Again there was a nice environment for learning and working in a friendly mind set co-operational platform. That helped to gain the experience to work in suit myself in any kind of work place and organization.

3.3: Project Task and Activities

Languages Used

- HTML 5 and CSS 3 for making the Front-End and colorized the site.

Bangladesh defers start of suspension on arrivals from Europe to Monday noon

Category : [News](#) | Sub Category : National Posted on 2020-03-16 12:17:31

Bangladesh will close its doors to passengers from the European nations, except the UK, for two weeks at 12pm on Monday, 12 hours behind the schedule for the start of the suspension.

Foreign Minister AK Abdul Momen announced the travel ban on Saturday in a desperate effort to limit the spread of the new coronavirus. He said the ban would be effective from Sunday midnight.

The move followed a surge in Bangladeshi expatriates returning from countries ravaged by the coronavirus, especially Italy.

Air Vice Marshal M Mafidur Rahman, the chairman of the Civil Aviation Authority of Bangladesh or CAAAB, told a press conference on Sunday afternoon that the suspension will be effective from Monday noon.

"The airlines will have to carry the passengers back at their own cost if they bring any from the European countries other than the UK," he said.

3.4 Challenges

Web application development is not a easy task. In this little time and it is not possible to be a master on it. It's hard to always do something new something creative. It is also a great challenge,

which web developers have to deal with it and I also. When developing my project, I had taken care of its coding structure as possible as well as user-friendly and execution speed is also keep faster. Working With new people in a new environment was a great experience and also challenging. The biggest challenge for me to meet customers need and satisfy them. Facing many problems or challenges is simple during the completion of a huge project. I've faced too, but overcoming is another experience for me. Even error solving and get done the projects has another part of fun and happiness. It may make one more confident to take the next challenges.

CHAPTER 4

COMPETENCIES AND SMART PLAN

4.1 COMPETENCIES EARNED

There are many types of websites on the market which has different quality, different look. So there must be a lot of competition in this market. By considering all of this, I made myself prepared to survive on the market in any situation and can create new opportunities. And this journey is not that easy, I had to learn more and more advanced as well as basic concepts. So, the competition is such that I can know the abilities of another person and I have an Idea about my abilities and limitations. This is very helpful for me and encouraged me to learning more and it is the fundamental truth that the more you read the more you learn.

4.2 SMART PLAN

- Learning more about logic's rather than only code.
- Understand the Application needs, business logic and how to optimize the solution using code.
- Software Design Patterns and Software life cycles.
- Learned more in JavaScript, JQUERY it helps to handle 40% - 50% complex code without any hassle in client side.
- For complex database design and query's I had to spend lots of time to understand the behaviors' of MYSQL
- I also gain a deeper knowledge of LARAVEL Framework which is based on PHP and still learning on different PHP technologies.

To survive in this competitive market, the most important things are keep you always updated because technology updates daily.

4.3 Reflections

- Learn more technology.

- Creating something outstanding for my country.
- Creating something for the nation and mankind.
- Doing challenging job with a creative team.

CHAPTER 5

Conclusion and Future career

5.1 Discussions and conclusion

This internship allowed me to acquire many experiences that will allow me to play a role in my web application development carrier. I am able to do several web development projects and had the opportunity to work on several projects, which helped me to become autonomous. This internship definitely plays an important role to making my career in software industry. I've learned so many things in this internship. How to manage a project and manage the timeline were the most important topic. Knowledge about various Web and Android Application technology can help me to find the better career than other. A web designer is a graphic artist who develops and styles objects for the Internet. Website designers are able to tap into their creative energy and design the overall layout and look for websites. A web developer is one that develops applications and functionality for the Internet.

how to become a good web designer and developer?

- **Visual Design**

It might seems obvious that you need design knowledge to be a web designer, but visual design focuses on digital products, so it might be different than what you expect.

- **UX**

Here come those funny abbreviations! UX stands for user experience, or how people feel (calm, frustrated, etc.)

- **Design Software**

Like any craftsperson, to do your work you need the right tools. Knowing your way around the industry standards will be helpful in every case and critical in many. While designing a website can be done right in a web browser, tools like Adobe Photoshop, Illustrator, and Sketch are ones that almost all designers use for important parts of their job like creating mockups, designing assets (think logos and images), and of course modifying and enhancing photos.

- **HTML**

You might not have imagined that a web designer would need to know how to code. But nowadays it's an expected skill for most design jobs. HTML stands for HyperText Markup Language, which is the coding language used to put content on a web page and give it structure.

- **CSS**

And then there's HTML's partner, CSS or Cascading Style Sheets. CSS is the code that tells browsers how to format and style HTML for a web page. In other words, it's what makes all the text and other content look good. With CSS, you can adjust the colors, change the fonts, or add a stunning background and so much more.

- **Time Management**

Whether you're interested in learning web design to go freelance or to work for a company, you'll need to stay on top of your schedule and your projects to be a standout web designer.

- **Communication**

Staying in touch and getting your point across are also must-have skills for a designer. You can't make a living from building websites without great communication. You'll need to keep clients up-to-date on the progress of their projects plus pitch ideas and explain your creations.

- **SEO / Digital Marketing / Social Media**

The skill set of SEO (search engine optimization), digital marketing, and social media might seem like it's meant more for a salesperson than a web designer.

- **Business / Client Management**

And, as an employee or as a freelancer, understanding the bottom line will help you make sure you or your company is profitable and sustainable.

5.2 Scope for Further Career

Getting a good job is a big challenge for me, if I do not have real experience. But a successful internship will help me to build a better career. Which is a great chance to prove my potentials and gain confident? I hope that this internship will benefited me

in the future to build a robust carrier.

PHP is also a base cost web development tool and as settlement companies prefer it more. PHP even for a fresher is a good tool to start with. If you want to pursue your career as a developer then PHP or any other language for that matter is just a technology, so focus more on logic.

Appendices

Appendix A: Internship Reflection

In my hand, there were two ways to choose, the first is an internship and another is project for almost anything. I choose the internship because I can get here the experience of a job in the real world that has been very useful to me. This will play a big role in my future career. That's the reason I chose Skill.jobs Limited because it's a reputable software company. They provide a good service now, it is a renowned organization. That's why I planned to do an internship here. I chose web development to do internships because it is now a service used more frequently. In doing so, I can show my potential around the world. I think that with the knowledge I gained here, I can work directly on a professional project. Finally, I like to say that I have the chance to work with the team members and to thank Skill.jobs Limited for giving me this benefit.

Appendix B: Company Detail
