ACKNOWLEDGEMENT

First we express our heartiest thanks and gratefulness to almighty God for His divine blessing makes us possible to complete the final year project/internship successfully.

We really grateful and wish our profound our indebtedness to **Dr. Sheak Rashed Haider Noori, Associate Professor & Associate Head**, Department of CSE Daffodil International University, Dhaka. Deep Knowledge & keen interest of our supervisor in the field of “*Online Book Buy & Selling Management*” to carry out this project. His endless patience, scholarly guidance, continual encouragement, constant and energetic supervision, constructive criticism, valuable advice, reading many inferior drafts and correcting them at all stage have made it possible to complete this project.

We would like to express our heartiest gratitude to Dr. Sheak Rashed Haider Noori , Associate Professor & Associate Head, Department of CSE, for his kind help to finish our project and also to other faculty member and the staff of CSE department of Daffodil International University.

We would like to thank our entire course mate in Daffodil International University, who took part in this discuss while completing the course work.

Finally, we must acknowledge with due respect the constant support and patients of our parents.

ABSTRACT

Now a days E-commerce is increasing rapidly in Bangladesh. Existing local and famous online book stores along with Amazon leads to recession of physical book stores. Most of the people move to buy books online. Most of the young people and educated people are contributes the increase of use of internet for online shopping in Bangladesh. This project is a revolution of this book industry in our country. The Online Book Buy & Selling Management will break the traditional book management. Every one buy books from everywhere through internet. It saves peoples time and their effort to select books and buy books. In this project, I am developing a fully functioning Online Book Buy and Selling Management which is market ready and it is backed by the most secure platform of ASP.NET framework (C# language). Every person those who are registered or not registered can visit the website.

CHAPTER 1

Introduction

The Online Book Management is an application system that is used to automate and manage all operation for a book store through internet. It is normally small in size. This platform wants to make original, good and best books which will serve the customer. If the user is admin, this application is used by him. Admin can manage all the information of this application. For example, Admin can upload, edit, delete books. On the other hand, customer can see and buy that books from this application. Customer will pay through internet banking like Bkash, SSL comerz , Rocket etc. It is a digital method for selling and buying the books. This platform genuinely serves their customer with right products in timely. It is an upgrade version of conventional system application of book selling and buying management. One can comfortably use this application for buying books. It provides user friendly interface for a better experience to the customers.

Motivation

The main purpose of this project is to create an online book management system which can comfortably use for buying books. It provides a better experience to the customers to search & purchase a book on category, author & price range. The admin will get more features from the customers. Admin can manage everything from his panel. The main motivation of this project is

- ⇒ A user-friendly website develops for the customers.
- ⇒ To enrich my knowledge in many technologies such as Asp.Net, MVC, HTML, CSS, Bootstrap, Database, JavaScript etc.
- ⇒ Remove time wasting & labor cost.
- ⇒ Providing extended book service.

About Project

In this modern era Online book store service is available, like Amazon, Roko Mari etc. They used different kinds of language on their project. In my project I am using Asp.Net MVC framework. The MVC stands for Model View & Controller. Here in this project, I am also using MSSQL for database. In my application customer can visit website, search books and buy books. There are huge stores of books in my application where a customer can easily search the book by using books name & authors name. They can also request for such a book which are not available in my application. A customer can follow a simple & easy procedure to buy their books.

First of all, a customer needs to visit my application, choose their necessary books and click for add to cart, then go for checkout.

A customer must login first before paying for the books. If the customer does not have proper credential, he needs to registration first. After successfully complete his registration he can go for login and pay for checkout books.

Finally, a customer can see all the order information like order details, last paid unpaid order etc. from his panel.

On the other hand, admin can upload books, edit books. He can manage all the information of this application. Admin can see the customer order list those are request for a book. Admin can see all the latest orders, books and customer list on the dashboard page.

Objectives

The online book buys and selling management system is based on following some objectives. These are:

- ⇒ Both admin and customer can visit this application form anywhere through internet.
- ⇒ This system based on secured data management system.
- ⇒ Ensure that an unauthorized person will not able to buy a book from this application.
- ⇒ Provides strong secure information for better services.

CHAPTER 2

Introduction

When a project is approved the very initial step is planning. Next is to design project specification and design that where the project is to apply. After finish this step then need to collect the required equipment that is necessary for project. This required equipment is called requirements. To start a project at first, we need to collect requirements, problem statements, related work analysis and gather more knowledge about this project. Then the next step is start working.

Related Work

We proposed our work to improve existing work of Online Book Management system. On the current system, the all information of books, customers are handled manually. That kills most of the time to manage everything. Suppose rokomari is an online book store there are manage only one book store. But In my project, there will be many book store in one application and customer can buy book from any store. I am also using SSL comerz developer api version for checkout.

Problem Statement

The major goal of this application is to create fully functioning online book buy and selling management. Without complexity anyone can buy books. This services solution ready to deployed for the customer and seller:

- ⇒ Get general understandings of online book buy and selling management system.
- ⇒ Get an understanding of ASP.NET framework and sql (MSSQL).
- ⇒ Discussed the result of the proposed work.
- ⇒ Admin should have management knowledge.

CHAPTER 3

General Idea

The developing method is divided into two steps. One is front end development and the another one is back end development.

I am using html, css, bootstrap, javascript to develop my front end. On the other hand, I am using asp.net mvc framework for develop my back end. I am using mssql database tools in this project.

Website Description

This website is work with admin and customer. Admin can manage everything in this website. Admin can update all the information of this website by dynamic data entry from his admin panel. Every single part of this website content is given dynamically. Admin can manage customer information like book order list.

On the other hand, customer can visit website easily by using internet. Customer can order books through this website. Customer also clear payment through this website. I am integrating payment method ssl comerz demo api in this website. This website is made by me with user friendly for both customer and admin panel. Customer can see all the order information in his panel. He can see order details easily and change his profile from his panel.

Navigation Bar & Footer

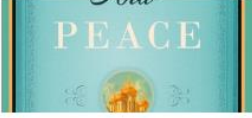

This is the navigation bar and footer in this application. The navigation bar is containing with logo, page link and profile link. The footer has three part, one is logo and website summery then another is page links and privacy link of this project. The last one is contact information.

Books Section

This is the all-books section. Customer can find his book from this section. They can buy books from here.

In this first of five volumes of autobiography, poet Maya Angelou recounts a youth filled with disappointment, frustration, tragedy, and finally hard-won independence. Sent at a young age to live with her grandmother in Arkansas, Angelou learned a great deal from this exceptional woman and the tightly knit black community there. These very lessons carried her throughout the hardships she endured later in life, including a tragic occurrence while visiting her mother in St. Louis and her formative years spent in California, where an unwanted pregnancy changed her life forever. Marvelously told, with

About Page

This page describes all about this project. The content is given to this page dynamically by the admin.

Why we read Book?

From the moment we start school, our educators begin teaching us the fundamentals of reading. We learn our alphabet and the unique sounds that each letter makes. Soon, we can read words and full sentences. And before we know it, we're reading everything from posters to what's printed on cereal boxes to subtitles on movies. But why are we really taught to read? Is it to be able to read street signs and directions, study our textbooks and take tests? It's true that we were all taught to read to comprehend better and communicate. However, the benefits of reading go far beyond that. The more we read, the more we understand the world around us. And when we read books, the more we discover life beyond what we already know. Here are more reasons that highlight the importance of reading books. Books Make Us Better Communicators Because books improve our vocabulary, our communications skills improve. Reading enhances our language skills and develops fluency, allowing us to express our thoughts and ideas better.

Login Page

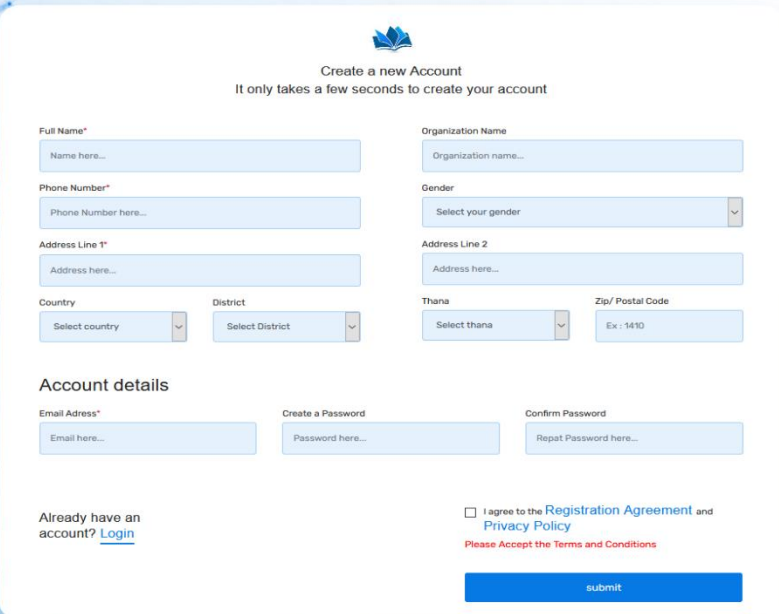

This is the login page in my project. Both admin and customer login their panel using this page.

The login form is centered on a white background with a blue geometric pattern in the background. It features a blue book icon at the top, followed by the text 'Account Login' and 'Please sign in to your account below.' Below this are two input fields: 'User Email' with a placeholder 'Email' and 'Password' with a placeholder 'Password'. A link 'Forgotten Password? [Reset Password](#)' is positioned below the password field. A blue 'Login' button is centered below the inputs. At the bottom, the text 'Don't have an account?' is followed by a 'Create one' button.

Registration Page

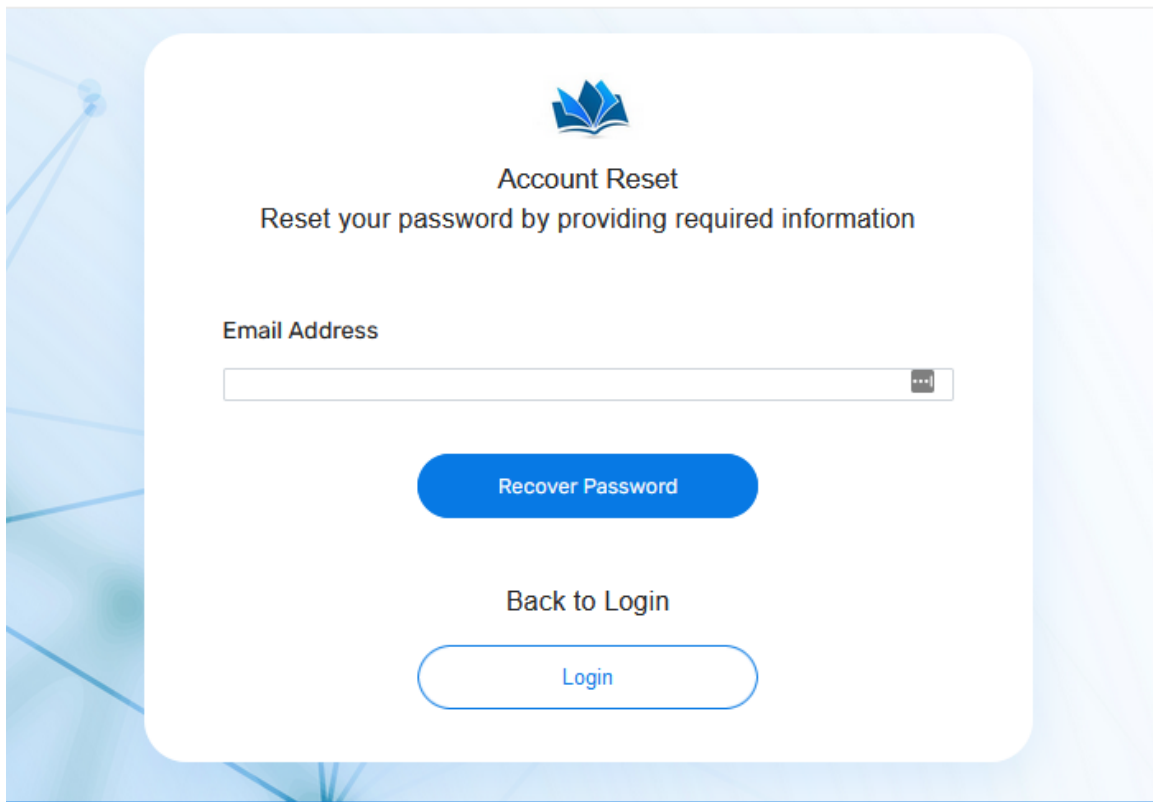

This is the registration page. A new customer can register to my application with fulfil this page information.

The registration form is centered on a white background with a blue geometric pattern in the background. It features a blue book icon at the top, followed by the text 'Create a new Account' and 'It only takes a few seconds to create your account'. The form is divided into two columns. The left column contains fields for 'Full Name*' (placeholder 'Name here...'), 'Phone Number*' (placeholder 'Phone Number here...'), 'Address Line 1*' (placeholder 'Address here...'), 'Country' (dropdown 'Select country'), and 'District' (dropdown 'Select District'). The right column contains fields for 'Organization Name' (placeholder 'Organization name...'), 'Gender' (dropdown 'Select your gender'), 'Address Line 2' (placeholder 'Address here...'), 'Thana' (dropdown 'Select thana'), and 'Zip/ Postal Code' (placeholder 'Ex : 1410'). Below these is the 'Account details' section with 'Email Address*' (placeholder 'Email here...'), 'Create a Password' (placeholder 'Password here...'), and 'Confirm Password' (placeholder 'Repeat Password here...'). At the bottom left, the text 'Already have an account? [Login](#)' is present. At the bottom right, there is a checkbox for 'I agree to the [Registration Agreement](#) and [Privacy Policy](#)' with the text 'Please Accept the Terms and Conditions' below it. A blue 'submit' button is centered at the bottom.

Password Request Page

Customer can reset his password by giving us email from this page.

The image shows a web form for account reset. It features a blue logo at the top, followed by the title 'Account Reset' and the instruction 'Reset your password by providing required information'. Below this is a text input field labeled 'Email Address'. Under the input field is a solid blue button with the text 'Recover Password'. Below that is a text link 'Back to Login' and a blue-outlined button with the text 'Login'. The entire form is set against a light blue background with a subtle geometric pattern.

CHAPTER 5

Limitations

To make this application I find some limitations. For finance problem I did not integrate the all-payment method, like merchant method and I did not get a domain and hosting to live this project. I implement mailing system using google mail but I do not have my own mail server for mailing.

Future Work

In future I will make this project fully automated. I will add many features in this project. I will make this project not only for single seller but also multiple seller and buyer. I will add seller panel for multiple sellers. Multiple book store will be in my projects. I will handle all this in future.

Conclusions

Due to digitalization of Bangladesh thousands and millions of customers can buy book from home through internet. They can save their time by ordering book from home or anywhere. This is a great work for me to make this project.
