APPROVAL

This Project/internship titled “Hotel Chain App (The Largest Hotel Booking Application of Bangladesh)”, submitted by Fardeen Mahmud, ID No: 191-15-2429 and Tanjina Akter Choity, ID No: 191-15-2440 to the Department of Computer Science and Engineering, Daffodil International University has been accepted as satisfactory for the partial fulfillment of the requirements for the degree of B.Sc. in Computer Science and Engineering and approved as to its style and contents. The presentation has been held on February 5, 2023.

BOARD OF EXAMINERS

7/02/23

Dr. Touhid Bhuiyan

DECLARATION

We thusly announce that this task has been finished by us under the management of **Al Amin Biswas, Sr. Lecturer**, Department of CSE, Daffodil International University. We likewise proclaim that neither this task nor any piece of this undertaking has been submitted somewhere else for the honor of any degree or recognition.

ACKNOWLEDGEMENT

First we express our heartiest thanks and gratefulness to almighty God for His divine blessing makes us possible to complete the final year project successfully.

We really grateful and wish our profound our indebtedness to **Al Amin Biswas, Sr. Lecturer**, Department of CSE, Daffodil International University, Dhaka. Deep Knowledge & keen interest of our supervisor in the field of “Data Mining, Machine Learning (ML), Deep learning, Data Science” to carry out this project. His endless patience, scholarly guidance, continual encouragement, constant and energetic supervision, constructive criticism, valuable advice, reading many inferior drafts and correcting them at all stage have made it possible to complete this project.

We would like to express our heartiest gratitude to Professor and Head, **Professor Dr. Touhid Bhuiyan** and **Co-Supervisor Md. Mahfujur Rahman** Department of CSE, for his kind help to finish our project and also to other faculty member and the staff of CSE department of Daffodil International University.

We would like to thank our entire course mate in Daffodil International University, who took part in this discuss while completing the course work.

Finally, we must acknowledge with due respect the constant support and patients of our parents.

ABSTRACT

This is the mobile application named “Hotel Chain App (The Largest Hotel Booking Application of Bangladesh)”. One of the biggest problems in tourism sector is hotel booking. As small of a problem it sound’s, is actually the biggest problem. For a delightful & tension free tour a place for staying is really important. But because of the growing population and limited tourism places, when so many people goes to one place it’s quite impossible to book a hotel room. As the hotels are already been booked. To, solve this huge of a problem we have developed “Hotel Chain App”. Our slogan is to make hotel booking more relaxing & easier. In this project that have basically 2 panel that are user interface, so that can customer or user can easily book hotels. But they must login first and then search, choose, select, review system book and so on & another is admin interface that can update hotels, process, confirm booking, pictures and slider change are here. Using this, every customers will be benefited.

CHAPTER 1

INTRODUCTION

1.1 Introduction

Tourism is one of the biggest assets for any country. All over the world many countries are depended on tourism. It's the biggest source for any countries reserve. Taking a holiday can greatly benefit a person's quality of life. While different people have very different ideas of what makes a good holiday (there are more than 150 types of tourism after all!), a holiday does have the potential to enhance quality of life. Travel is known to help broaden a person's way of thinking. Travel introduces you to new experiences, new cultures and new ways of life. Many people claim that's why 'find themselves' while travelling. It enhances cultural, social, environmental knowledge. One of the biggest problems in tourism sector is hotel booking. As small of a problem it sound's, is actually the biggest problem. For a delightful & tension free tour a place for staying is really important. But because of the growing population and limited tourism places, when so many people goes to one place it's quite impossible to book a hotel room. As the hotels are already been booked. To, solve this huge of a problem we have developed "Hotel Chain App". Our slogan is to make hotel booking more relaxing & easier.

1.2 Motivations

The motivation of this project came from all the hassles that occurs during booking hotels. Some key aspects are:

- a) Secure Room.
- b) Clean Room.
- c) Finding nearest hotels.
- d) Room availability.
- e) Double booking and so on.

People face these problems all the time. So, to reduce these problems we made this project.

1.3 Objectives

This project's objective is to reduce hotel booking hassle. In tourism, hotel is the most important aspect. A care-free fun tour depends on safe hotel booking. We are making this project so that people don't have to face the problems they face with hotel booking any more.

1.4 Expected Outcomes

The output will be:

- User will search, choose & book his/her hotel from being at any place any time.
- This will be a user-friendly app.
- For safety, security and booking confirmation, customers will get notifications.
- They will be able to add hotels to their favorite list.

1.5 Report Layout

- ✓ Chapter-1 describes about the Introduction, motivation, objectives, outcomes and report layout parts.
- ✓ Chapter-2 describes about the Background study, related work, comparative study, scope of problem and challenges all the discussions.
- ✓ Chapter-3 describes about the Requirement's collections, use case model, logical data model and business process model.
- ✓ Chapter-4 describes about the Application of project design.
- ✓ Chapter-5 describes about the Implementation and testing of the project.
- ✓ Chapter-6 describes about the Conclusion and future work scopes of the project.

CHAPTER 2

BACKGROUND STUDY

2.1 Background Study

This app is a hotel booking app. The app is made with Android studio using Java. For the website and dashboard we used programming language/code named php, Laravel platform, and so many packages that are really important for us. For code implement and design we used Vs Code that's a very common platform or compiler that are used for html, php language for better uses that is basically it is an easily accessible code editor for various operating system from Microsoft to MacOS. Alongside we used many shortcut keyboard instructions and so on. Alongside we used the one platform that is Laravel documentation, stripe from stripe official documentation and finally JavaScript and jQuery documentation for decoration, background support and all are doing edit in the visual studio. Vs code is a code editor platform, it supports a variety of programming languages and it's all features. Visual code enables it to run on any device, at any place which is the biggest opportunity for developers. The most of common programming languages have basic support in Visual Studio Code. Visual Studio Code helps to build resources and also make drag & drop applications. Then we used Firebase for the database setup, create, update and delete. We can see our every hotels, pictures & data's via database that are user friendly.

2.2 Related Project

When we decided to create an app and after that we decide we will create a hotel booking app that are most common and popular hotel booking sites that are well known to everybody in the world that times we followed plenty of famous readymade project. And follow them their activities and work policy. Those all sites are famous and popular for us like: Booking.com, Agoda and so on. The Fig 2.1 represents the site Booking.com, which is one of the biggest OTA service. Booking.com helped us furnishing our idea at the development period. There are 3-4 sites in the world which we followed most for developing our project for my country. But we will show only one below:

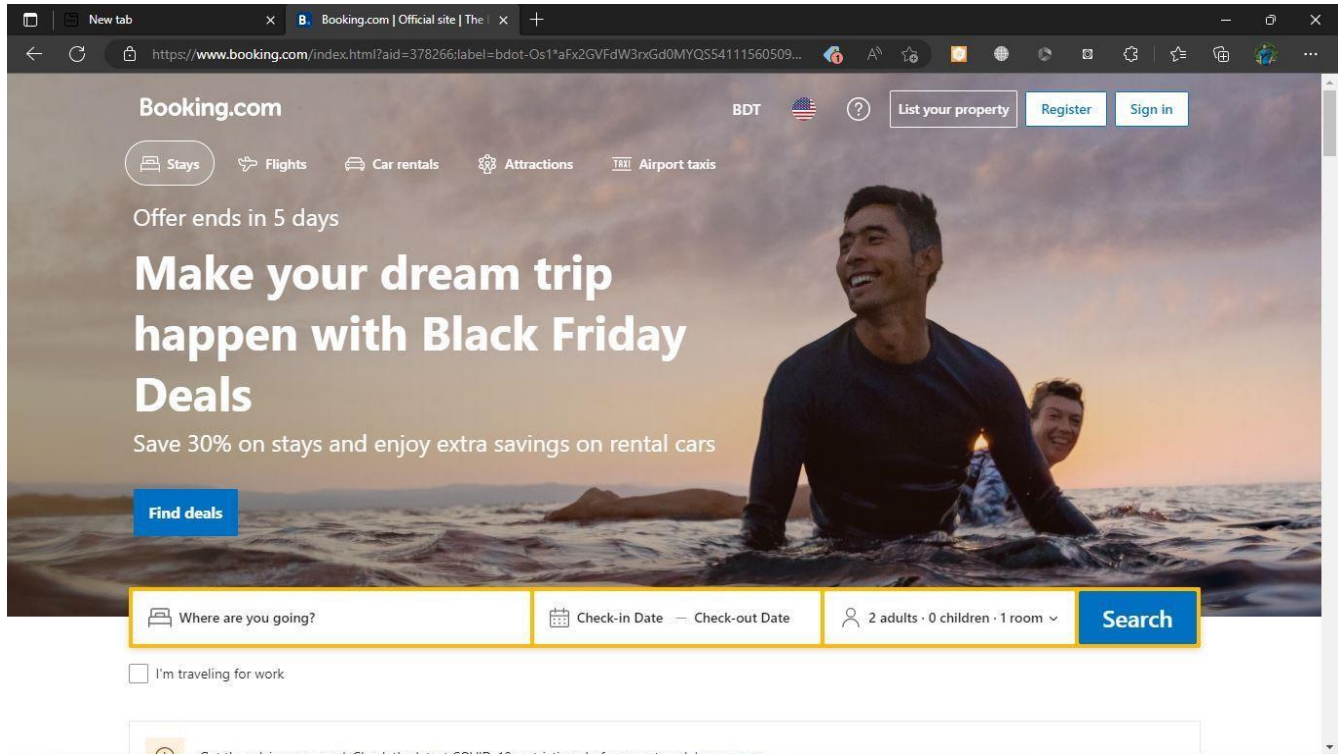

Fig 2.1.: Booking.com

We have learned from those websites:

- Good decorum.
- Well organized.
- Smooth to run.
- Safety and security are proper and so on.

2.3 Comparative with other

Table 2.1: Comparative study

Case study	Booking.com	Agoda	Hotel Chain App
Registration & Login for user and admin	Yes	Yes	Yes
Multilanguage	Yes	No	Yes
Discount/offer	Yes	Yes	Yes
Profile update	Yes	Yes	Yes

Table 2.1 represents the comparative study of the project with other OTA sites. Like other Hotel Chain provides offer, profile update, Login and registration for users and admin. Hotel Chain is also multilingual. This app provides a proper service for all the users.

2.4 Problem Analytics

We have faced a lot of problem, when I have decided to create this:

- At first understanding the project language was hard.
- Without internet, it's impossible to book.
- Regular update is so tough though, I am using a Laravel.
- For API connection, internet is needed.

2.5 Challenges

- Package installation problems in some cases.
- Always check for updating.
- User friendly.
- Data collection and Time maintenance.
- Check System control management.
- Perfect product set up check.
- Database management system.

CHAPTER 3

REQUIREMENT SPECIFICATION

3.1 Business Process Model

The Fig: 3.1 represents the business process model of Hotel Chain App. The guests choose and book hotels from the hotel chain app. The request comes to the dashboard and is approved or verified by admin. The dashboard shows every important details that's required for a booking to be successful. The booking happens in just 10 seconds with only five steps.

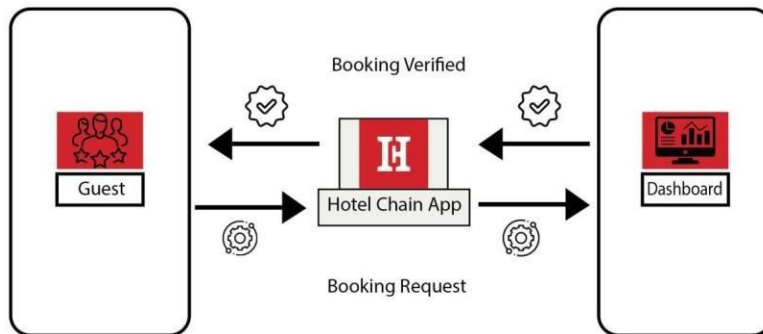

Fig 3.1: Business process model (BPM) of this project

3.2 Analysis & Design

It's a most essential for background design in every project for better understanding. Here, we can use the firstly they analyze the BPM and find out the user requirement which is called requirement analysis. After analysis create a pre-design by analyzing that information. And finally draw the ecommerce background and implemented by those models. Some core parts of requirement below:

- To create an account for customers, amount store.
- Enable shopping cart and gateway system.

3.3 Testing & Coding

The testing systems are:

- The backend updating.
- Authenticate package.
- Real time uses possibility.
- Ideal performance and capacity utilization.

All are can be checking by the developer that are facing no problem for user.

3.4 Maintaining

The list below maintain points are important:

- Firstly, they can determine then checking the project plan.
- Talking about the website budget, Statistics and financial calculations.
- Create maintenance methods and finding the error.
- Solving errors with maintaining safety laws.
- Manage equipment.

3.5 Flowchart

The Fig: 3.2 narrates flow chart, which shows the apps functional controlling way. As the chart shows that the user first registers to the app. Then login to the app. After logging in the user filters and chooses his desired hotel. If the rooms are available then user select room, confirm check in date and by clicking the book now button confirms the booking. And if the room aren't available then searches for another hotel with the requirements user has.

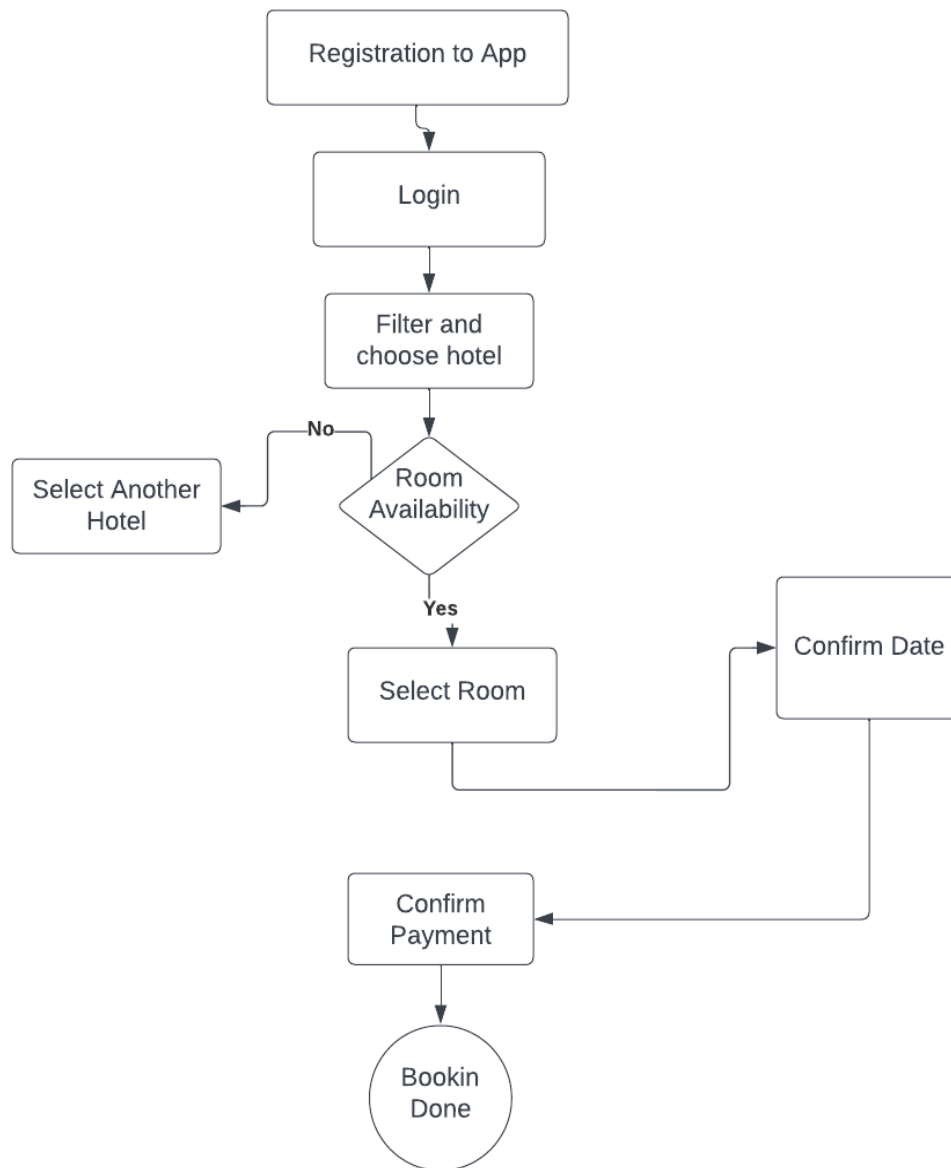

Fig 3.2: Flow diagram for booking hotel.

3.6 Use case diagram

The Fig: 3.3 describe the Use case diagram. This is the basically representation all interaction between the guest and admin. It shows the user activity from user interfaces alongside admin activity from admin interfaces.

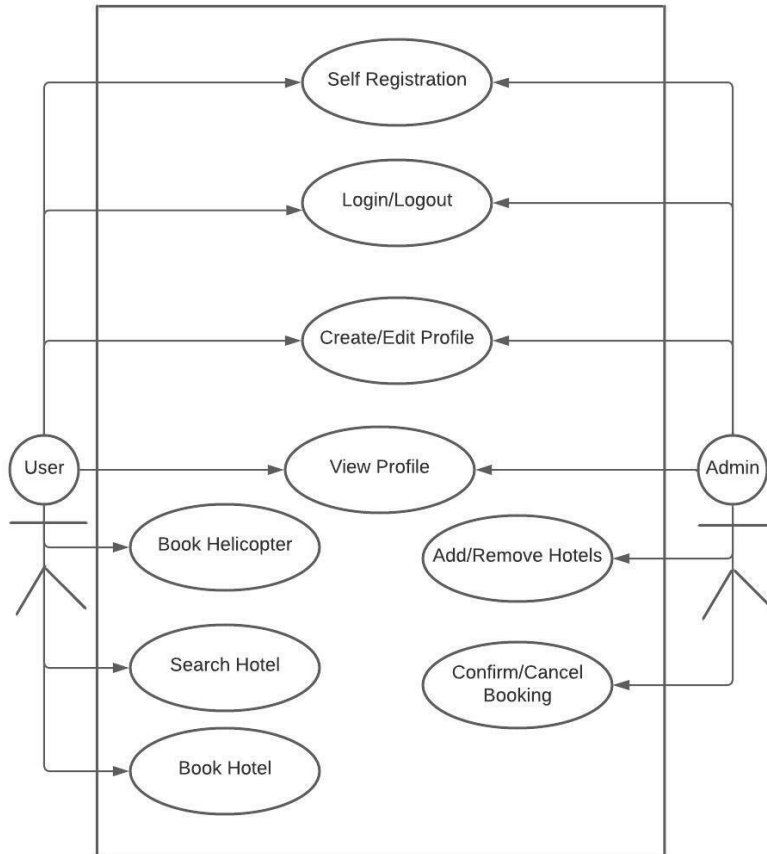

Fig 3.3: Use case diagram of this project

3.7 Requirements of design

Table 3.1 Design requirement of this project

SL NO	Parameter	Admin page	User page
01	Registration	Yes	Yes
02	Password change	Yes	Yes
03	View	Yes	Yes
04	User service	Yes	No
05	Hotel update	Yes	No
06	Log in page	Yes	Yes
07	Take action	Yes	No
08	Update info	Yes	No
09	Profile	Yes	Yes
10	Logout	Yes	Yes

The table: 3.1 represents the design requirement of this project. It shows the parameters of user and admin page. As per the table the Parameters of registration, password change, view, log in page, profile and logout are Yes / Positive on both Admin and User page. For user service, hotel update, take action, update info at Admin page its Yes but for User page it's No.

CHAPTER 4

DESIGN SPECIFICATION

4.1 Project Overview

4.1.1 Home page

The Fig: 4.1 narrates the Homepage of the app. User can firstly view this page and see the all hotels that are already visible in their home page.

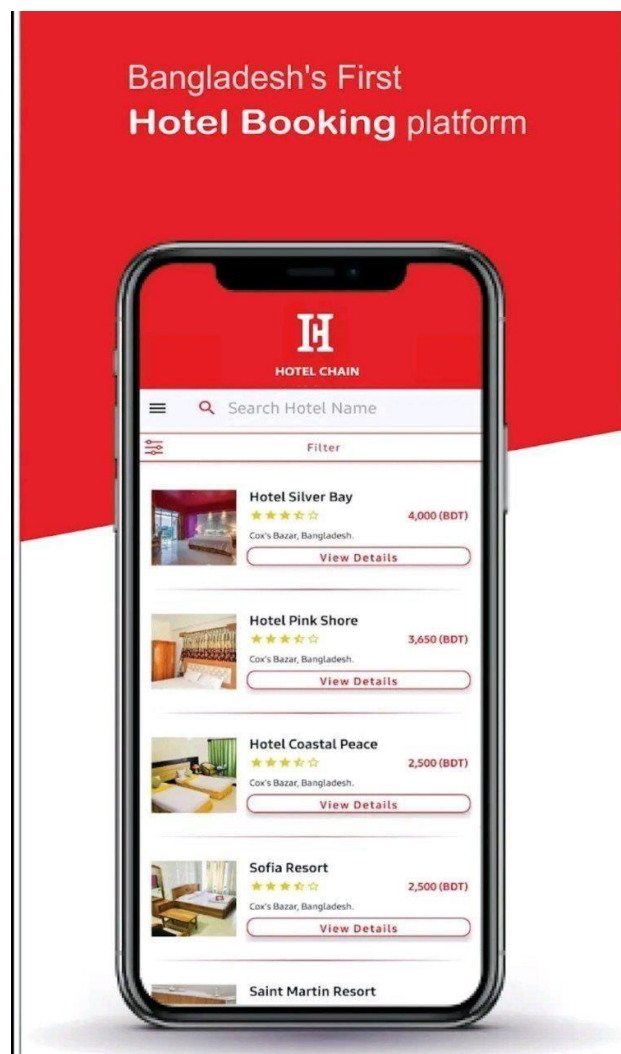

Fig 4.1: Home page

4.1.2 Login/Registration page

The Fig: 4.2 represents the Login / Registration page of the app. User will be able to Login or Signup from this page. They can login from their google account directly.

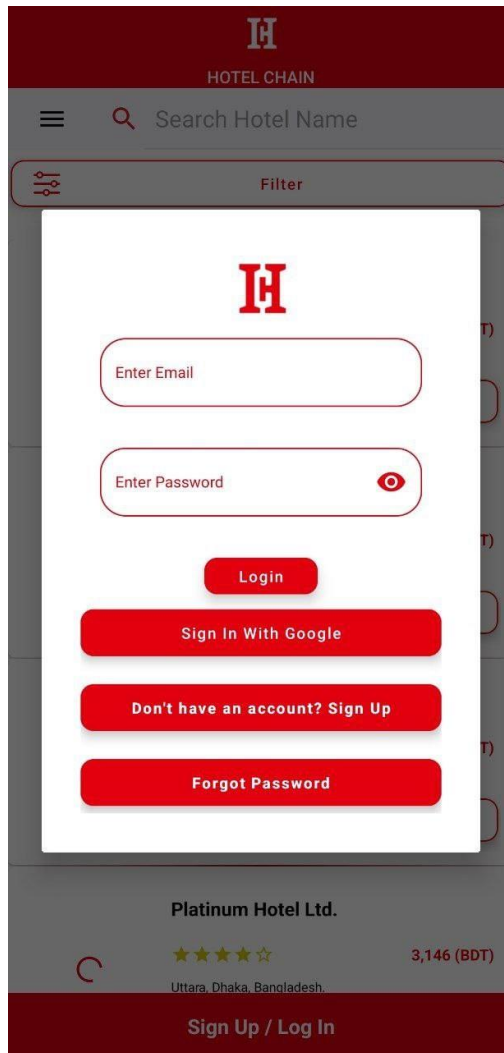

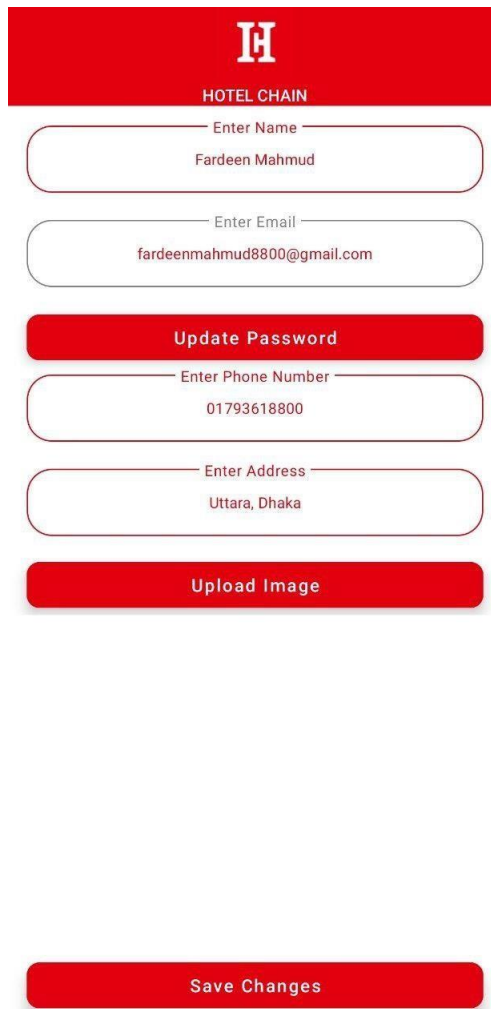

Fig 4.2: Login/Registration page

4.1.3 User profile page

The Fig: 4.3 performs the User profile of the app. This is the user profile page. User can update/change his/her profile picture, password, phone number, address at any time from this page.

The image shows a user profile page with a red header containing a white 'H' logo and the text 'HOTEL CHAIN'. Below the header are several input fields and buttons. The first input field is labeled 'Enter Name' and contains the text 'Fardeen Mahmud'. The second input field is labeled 'Enter Email' and contains the text 'fardeenmahmud8800@gmail.com'. Below these is a red button labeled 'Update Password'. The third input field is labeled 'Enter Phone Number' and contains the text '01793618800'. The fourth input field is labeled 'Enter Address' and contains the text 'Uttara, Dhaka'. Below these is another red button labeled 'Upload Image'. At the bottom of the page is a large red button labeled 'Save Changes'.

Fig 4.3: User profile page

4.1.4 Filter Option

The Fig: 4.4 describes Filter Option. This is the filter page, from where user can filter their travel location and budget to choose their suitable hotels.

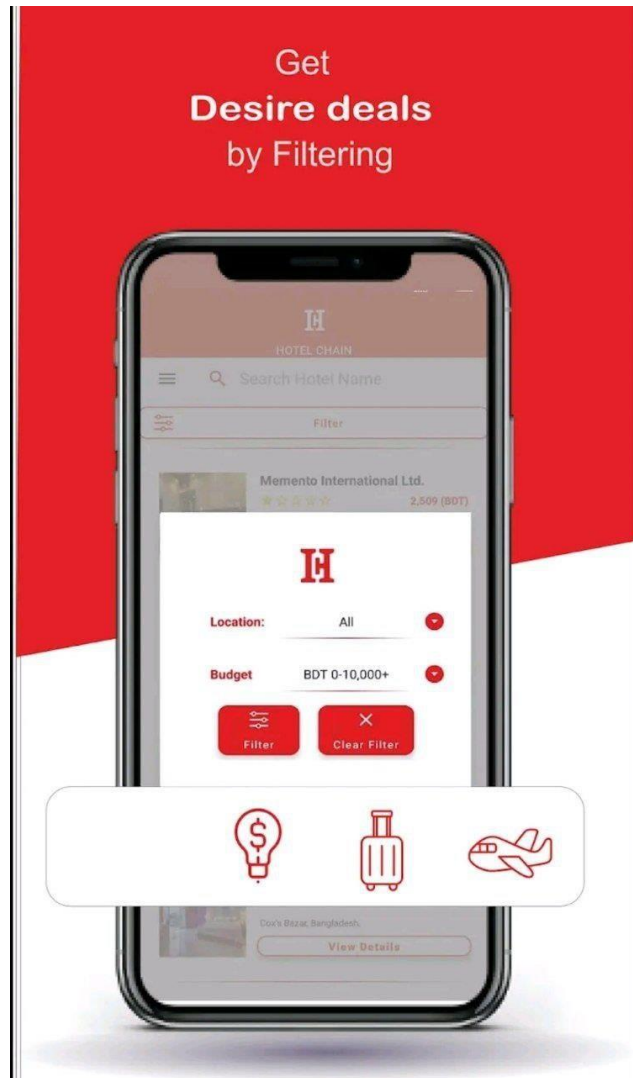

Fig 4.4: Filter Option.

4.1.5 Hotel Profiles

The Fig: 4.5 represents the Hotel Profiles. This are the hotel profiles that shows hotels: rating, price, quality, location also thumbnail picture for better understanding.

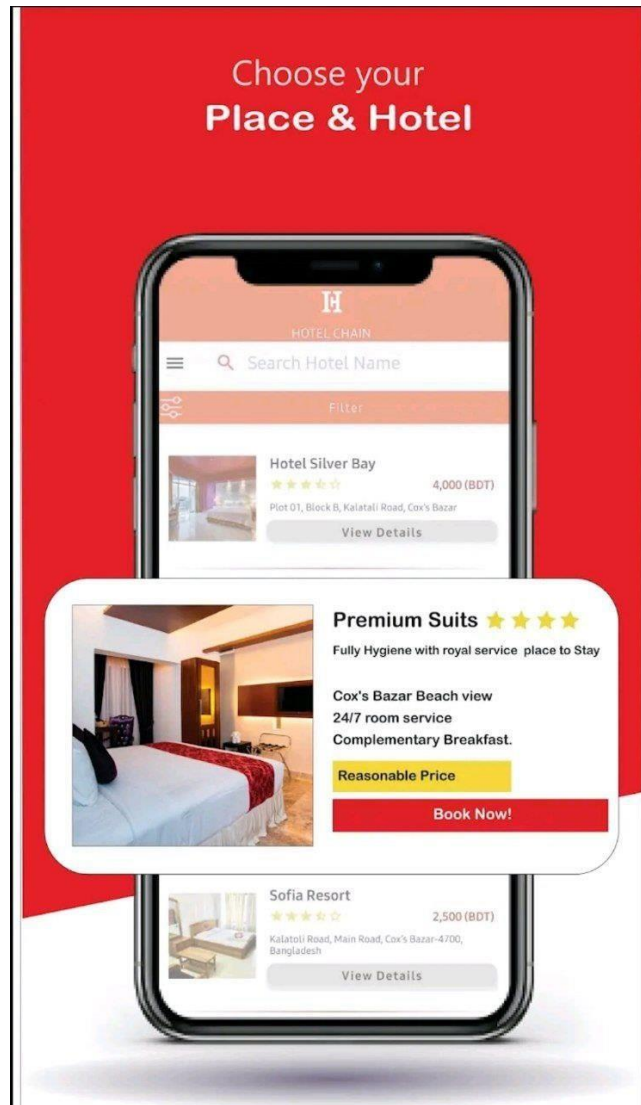

Fig 4.5: Hotel Profiles

4.1.6 See on Map & Get Directions

The Fig: 4.6 represents the See on Map & Get Directions options. This is of redirects the user to the direct location of the hotel. So that the user can find their hotel easily and virtually.

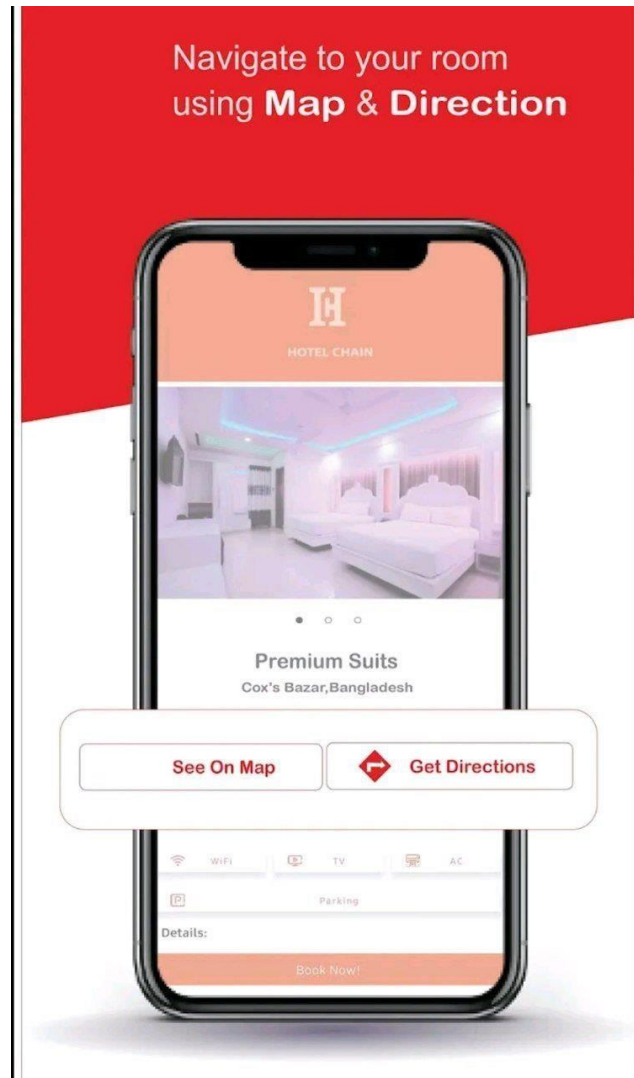

Fig 4.6: Hotel Profile

4.1.7 Add Room

The Fig: 4.7 represents the Add Room page. This page lets user to select their rooms, amount of guests. Also allows them to see the total price. They can add and remove rooms from here.

The screenshot shows a user interface for adding a room. At the top is a red header with a white 'H' logo and the text 'HOTEL CHAIN'. Below this is a grey bar with the label 'Room:' and a dropdown menu showing 'Couple Bed Room(Lake View)'. Underneath is a white box containing the text 'Couple Bed Room(Lake View) (3,500 BDT)'. Below that is a 'Room(s)' input field with the number '1' and a green '+' button on the right and a red '-' button below it. A 'Price' field shows '3,500 (Per Night)'. A red 'Add Room' button is centered below these fields. Below the button is a list of added rooms, showing 'Couple Bed Room(Lake View) (3,500 BDT)' with a quantity of '1' and a total price of '3500.0'. A red 'Remove' button is positioned below the list. At the bottom of the page is a large red button labeled 'Book Now!'.

Fig 4.7: Add Room.

4.1.8 Calendar Page

The Fig: 4.8 represents the Calendar Page. From this page user selects their check in and check out dates.

Fig 4.8: Calendar.

4.1.9 Payment Invoice

The Fig: 4.9 represents the Payment Invoice page. This page shows the invoice or detailed pricing of a booking that user confirmed.

4.1.14 Hotels Details

The Fig: 4.14 represents the Hotels Details page. This page shows all the hotels that are enlisted with Hotel Chain App and their details.

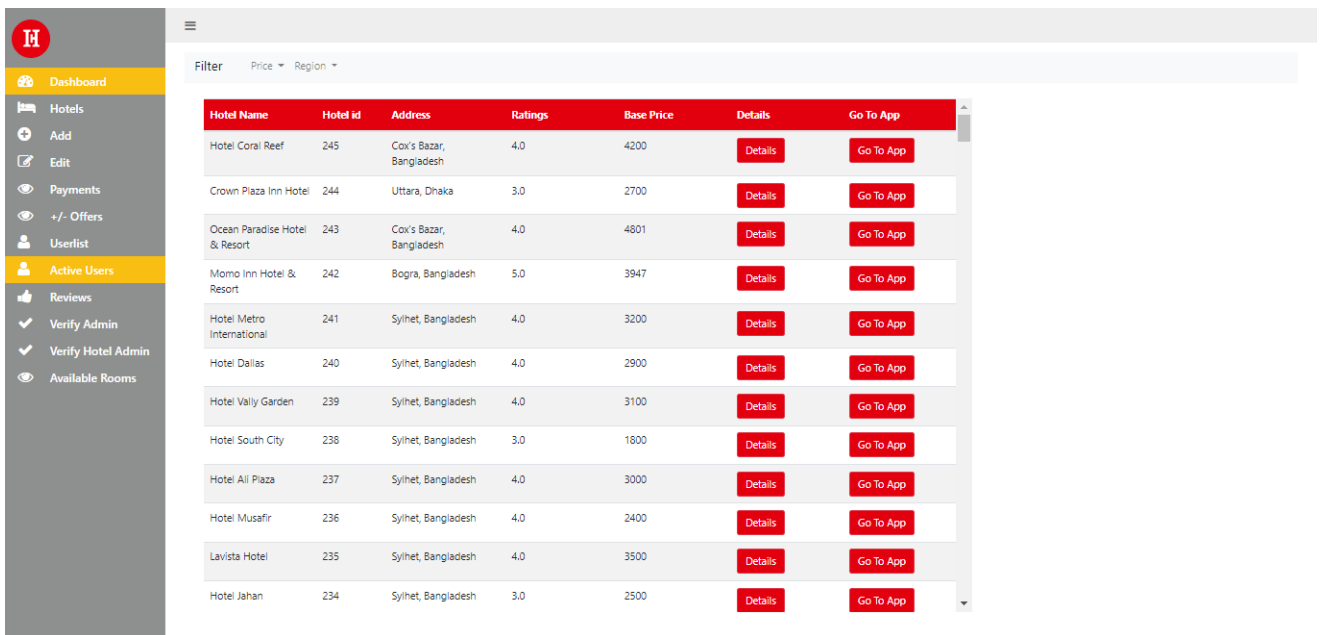

Fig 4.14: Hotel Details

4.1.15 Add Hotels

The Fig: 4.15 represents the Add Hotels page. From this page admins will be able to add & delete the hotels.

The screenshot shows the 'Add Hotels' page. On the left is a sidebar menu with a red circular logo at the top. The menu items are: Dashboard, Hotels, Add (highlighted), Edit, Payments, +/- Offers, Userlist, Active Users, Reviews, Verify Admin, Verify Hotel Admin, and Available Rooms. The main content area is titled 'Forms' and contains a form for adding a new hotel. The form fields are: Hotel Name (text input), Short Description (text input), Long Description (text area), Address (text input), Latitude (text input), Longitude (text input), Rating (text input), Price (text input), and Stock (text input). Below these fields are checkboxes for various amenities: Wifi, Car Parking, Card Payment, Laundry Service, TV, AC, Restaurant, Swimming Pool, Mini Bar, Water Heater, GYM, and Sea View. At the bottom of the form, there is an 'Add Region' dropdown menu and an 'Add' button.

Fig 4.15: Add Hotels.

4.1.16 Edit Hotels

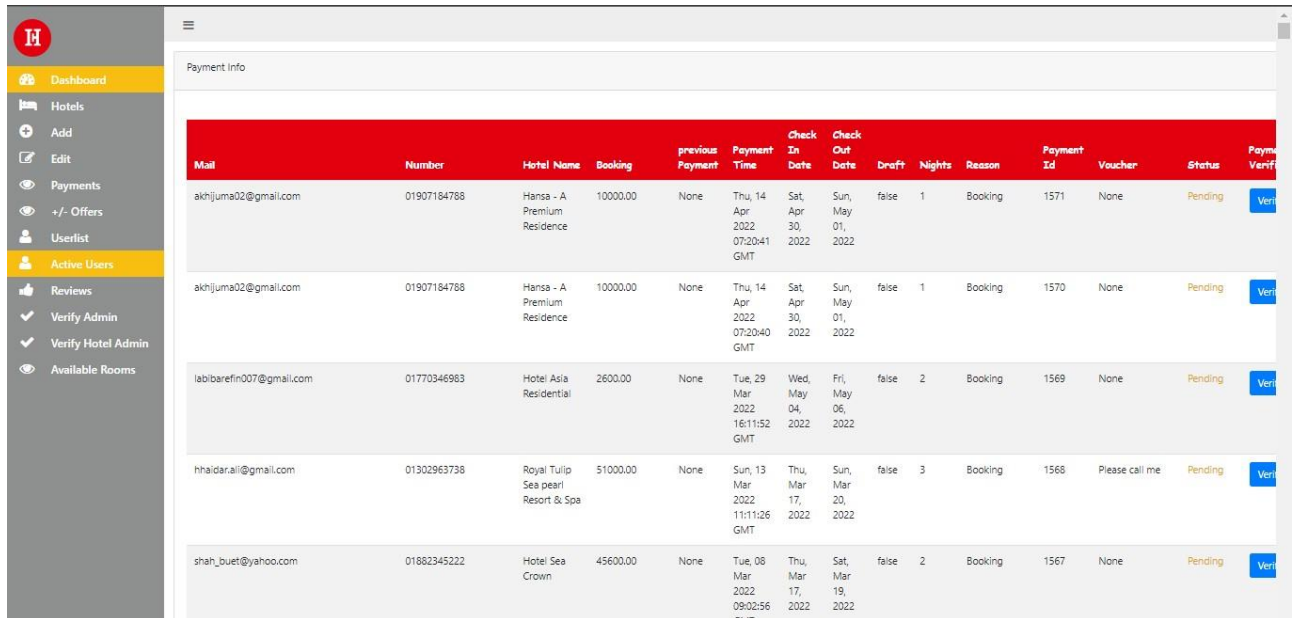

The Fig: 4.16 represents the Edit Hotels page. This page allows the admins to edit the hotel details at any time.

The screenshot shows the 'Edit Hotels' page. On the left is a sidebar menu with a red circular logo at the top. The menu items are: Dashboard, Hotels, Add, Edit (highlighted), Payments, +/- Offers, Userlist, Active Users, Reviews, Verify Admin, Verify Hotel Admin, and Available Rooms. The main content area is titled 'Edit' and contains two forms for editing hotel details. The left form is for editing the hotel's general information, including Hotel Id (with an 'Auto Fill-Up' button), Hotel Name, Short Description, Long Description, Address, Latitude, Longitude, Rating, Price, and Stock. The right form is for editing the room details, including Hotel Id, Room Id (with an 'Auto Fill-Up' button), Additional Description, Per Night Cost, and Select Room Type. Both forms have 'Submit' or 'Remove' buttons.

Fig 4.16: Edit Hotels.

4.1.17 Booking Confirmation

The Fig: 4.17 represents the Booking Confirmation page. This page allows the admins to confirm and cancel bookings. Admins can also see their customers booking details.

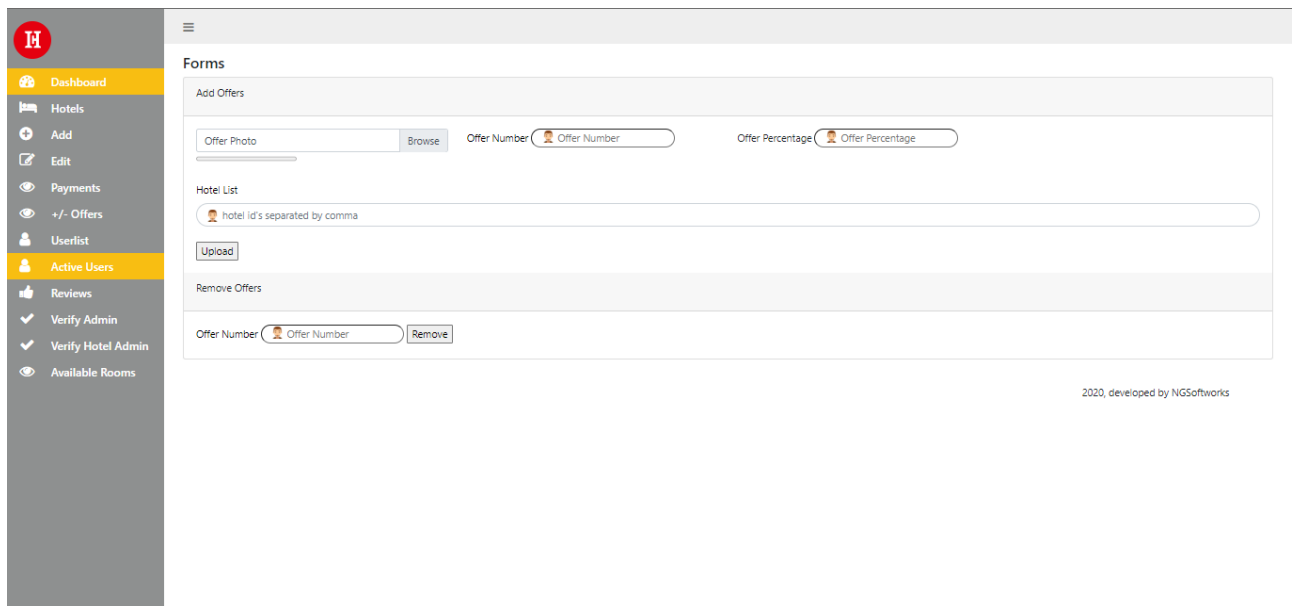

The screenshot shows a web application interface for booking confirmation. On the left is a sidebar menu with options like Dashboard, Hotels, Add, Edit, Payments, +/- Offers, Userlist, Active Users, Reviews, Verify Admin, Verify Hotel Admin, and Available Rooms. The main content area is titled 'Payment info' and contains a table with the following columns: Mail, Number, Hotel Name, Booking, previous Payment, Payment Time, Check In Date, Check Out Date, Dneft, Nights, Reason, Payment Id, Voucher, Status, and Payme Verif. The table lists five bookings with details such as email addresses, phone numbers, hotel names, booking amounts, and dates.

4.2 PHP

PHP is a scripting language used for web development. It was originally created by Danish-Canadian programmer named Rasmus Lerdorf in 1993 and released in 1995. This languages reference is now produced by The PHP Group.

4.3 Bootstrap

Bootstrap is a framework used for creating websites. It makes website making more easier and faster. It helps by providing the design templates for forms, buttons, tables, navigation, images and more in HTML and CSS.

4.4 Java-script

The short form of Java Script is JS, It's a programming language. JS is a popular programming language. As of 2022, 98% of websites on client sides use Java Script. Every major web browsers have Java Script engine that are dedicated for them.

4.5 Database

Firebase is a set of hosting services for any type of application (Android, iOS, Javascript, Node.js, Java, Unity, PHP, C++ ...). It's a real time communication server. It provides NoSQL, notification service and so on.

4.6 Java

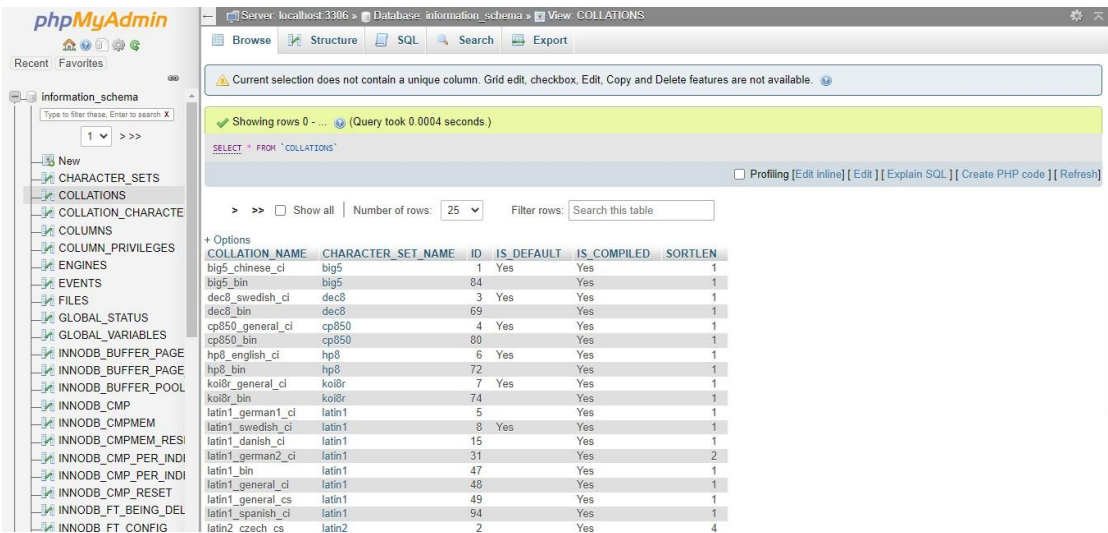

Java is a high-level, class-based, object-oriented programming language with a low number of implementation dependencies. It is a general-purpose programming language designed to allow programmers to write once and run everywhere (WORA), which means that generated Java code may run on any platform that supports Java without the need for recompilation. Java programs are often compiled to bytecode that can run on any Java virtual machine (JVM), independent of computer architecture.

CHAPTER 5

IMPLEMENTATION AND TESTING

5.1 Database table for the different purpose

The Fig: 5.1 represents Database table. This is the database of the app. This data base has all the data stored in it. The room number, booking & every actions that are taken by the app and dashboard are stored here. The data's are complex as the actions are taken more often.

COLLATION_NAME	CHARACTER_SET_NAME	ID	IS_DEFAULT	IS_COMPILED	SORTLEN
big5_chinese_ci	big5	1	Yes	Yes	1
big5_bin	big5	84		Yes	1
dec8_swedish_ci	dec8	3	Yes	Yes	1
dec8_bin	dec8	69		Yes	1
cp850_general_ci	cp850	4	Yes	Yes	1
cp850_bin	cp850	80		Yes	1
hp8_english_ci	hp8	6	Yes	Yes	1
hp8_bin	hp8	72		Yes	1
koi8r_general_ci	koi8r	7	Yes	Yes	1

5.2 Test result of this project

These results are below:

- Easy to handle.
- Security level is fine.
- User friendly.
- Customer satisfaction are huge.

CHAPTER 6

CONCLUSION

6.1 Conclusion

Doing this project we faced multiple problems. Problems and mismatches were the biggest problems. As we were new developer the project was difficult for us. As the app is connected on multiple platform development. People can't completely book from the app. And the app is under constant development. But along with all the obstacle we finally, were able to complete the project using our experiences also taking help from google and the internet. The project will help many by solving their hotel booking problems. People won't have to be worried about their hotel booking and their safety. Tour will be easier and fun now with Hotel Chain App.

6.2 Scope for future work

The app is under constant development. The future work scopes for the app are:

- Move to web based apps: As the app is now only available on android. We will be able to make it available at every platform by making it web-based app.
- Making it internationally more available: The app is available on all over Bangladesh & and at some parts of India, Maldives, Singapore, Bali. It is our sore vision to make it available at all the countries.
- Add more options: The app has many options but even though the app feels limited. So, more options like bus, train, flight ticket or booking will be added on the app in future.
- Making the interface smoother: The app interface is on good but it needs to be better. So, we will work on the interface more and make it smoother along with more desirable or attractive.
- Adding more hotels and regions: More hotels and regions will be add on the app in future. As the user grows more regions will be available for them.
- More Secure: The app is secure but with the growing users the app will have more data. So, the app will have to be more secure. The data's and user privacy needs to be assured. For that more security will be added on the app.
