ACKNOWLEDGEMENT

I would like to express my sincere gratitude to everyone who cooperated in the preparation of this internship report. It would not have been possible without the cooperation members and mentor. They are so cooperative and friendly as well.

First, I would like to express my gratitude to Almighty for giving me the strength and opportunity to successfully complete the report during this period.

The internship report has been prepared as an internal part of **NFE** program at **Daffodil International University**. I am indebted to a number of persons for their suggestion, direction and co-operation that have enable me to prepare this report.

I am grateful to my respected teacher and supervisor **Md. Harun-Ar Rashid, Senior Lecturer** for his help and cordial guidance to my work.

I would like to express our heartiest gratitude to **Dr. Nizam Uddin, Associate Professor and Head In-Charge**, Department of NFE, for his kind help to finish our project and also to other faculty member and the staff of NFE department of Daffodil International University.

Finally, I must acknowledge with due respect the constant support and patients of my parents.

EXECUTIVE SUMMARY

The Internship was conducted at Golden Harvest from 21 June to 28 July 2022. This factory has two units as Agro unit and Ice-cream unit. This mainly manufactures difference types of foods like snacks items (like French fries, samosa, singara, nuggets, spring roll, meat ball, fish ball, pop chicken, chicken strips and so on), frozen based items (like paratha, tehari, mutton biriani, morug polaw etc.), various types ice-cream etc. To prepare this ice creams they are used skimmed milk or full cream milk, vegetable fat, sugar, RBD (Refined, bleached, deodorized) coconut oil, stabilizer or emulsifier, color, flavor, water etc. They are focus on quality control and assurance of products or materials (storing to distribution). For quality control they are checking: Raw materials (RM), packaging materials (PM), finish goods (FG). And for quality assurance, they are following three tests: Physical test [RM, PM, FG], chemical test [RM-Mandatory, PM], microbiological test. [RM, FG]. By these tests they identified the actual hazard on food and develop the quality, reduce risks, gain productions and customer loyalty. They also maintain hygienic system like: CIP (Clean-in-place), it refers to a method used to clean production facilities and pipelines. The plant is cleaned in circular processes. They follow 5 steps of cleans. And another one is COP (Clean-out-of-place), it refers to systems and equipment that require special handling for disassembly, relocation, or cleaning and disinfection. They use for sanitizing water, chlorine, detergents. They always ensure that, all equipment, floor, products will be clean & safe. They try to make hazard free situation and produce unhygienic products. And finally, I have to say that they are very polite & friendly. It's an open place to learn about industries level, there all functions, materials, methods.

CHAPTER 1

1. Introduction

1.1 Introduction

This internship is a part of the Bachelor of Science in Nutrition and Food Engineering (NFE) program that provides an on-the-job experience to students. I was placed as a trainee at Golden Harvest, Hotapara, Monipur, Gazipur. This internship program provided me with my first on-the-job experience and education in a variety of fields. During my internship, I was able to become acquainted with the Golden Harvest working environment. My internship was only 30 days long.

Golden Harvest has so many types of departments like Administration department (HR & Admin), VAT department, Accounts, Production, Quality Control, Maintenance, Store, and Distribution. From this company we have learned following activities:

- Make the necessary production plan according to the schedule provided by the production department.
- Firstly, we know about the plant layout of the production line.
- To know about the procedure of production.
- Note all the information about the production line.
- Maintain quality control parameter as per specification in Bangladesh Standard.
- Quality assurance of production.
- Know about packaging quality
- Knowledge on product costing, labeling, packaging, distribution or shipping procedure
- They always focus on their products quality.
- They achieved national and international certificate like HACCAP, ISO 22000:2005, 9001:2008, BSTI, HALAL
- Have to submit all information by an assignment.

1.2 Aim of training

The internship was theory and practical based training. It helps us to develop our job skills, communications skills, help to gain knowledge about industrial sector; it also develops work habits and attitudes necessary for job success. This builds a record of work experience. During internship, a supervisor who guides us and provides information and leaning us about the production very well follows us up.

Internships are a great way to apply what I learning the classroom to real-world experiences. Learning is one thing, but using those abilities and taking them to the job market is a terrific opportunity to explore other professional and career pathways that meet individual interests. An internship allows us to get experience in the job sector we wish to pursue. This not only provides people an advantage when applying for employment, but it also prepares them for what to anticipate in their area and boosts their confidence in their work. Having an internship improves us in the workplace and expands our professional network. There is a great chance of getting a job by connecting with people, so networking is key. Internships are an excellent way to meet experts in our intended job sector as well as other students who share their interests. Moreover, this is the best platform of learning system and proofs you.

CHAPTER 2

2 Description Of Organization

2.1 Overview of Golden Harvest:

Golden Harvest Info Tech Limited was established in 2000. Started production of frozen foods in Bangladesh in 2006. Golden Harvest Agro Industries Ltd. Is a listed company, which is the one of the pioneer sin frozen food, manufacturing in Bangladesh. The brand is known nationally and internationally for its wide range of ready-to cook frozen products. Golden Harvest Ice Cream Co. Limited is a new comer to the Bangladesh ice cream industry with the BLOOP brand. Bangladesh's ice cream industry is growing steadily at a pace of around 12% per year. The company distributes nationwide and exports to the United States, Canada, Australia, the Middle East and European countries, and maintains temperatures at -18°C through its cold chain network. All of this ensures the highest quality products from farm to fork. This company makes easy our daily life. It's a popular company to all over worldwide. There are various products are produced in Agro and ice cream floor. The Agro sector offers around 68 types of frozen foods and the ice cream 'Bloop' brand offers around 40 various variants including sticks, cups, cones, calippo, sorbets, tubs, cakes and many more.

2.2 About Golden Harvest Industrious ltd

Golden Harvest is one of the leading business groups in Bangladesh with diversified interests in food, dairy, commodities, information technology, logistics, real estate, aviation, infrastructure development and insurance. Golden Harvest Info Tech Limited was established in 2000. It was an export- oriented software company in its early days. Then another field was developed. Golden Harvest Ice Cream Ltd. Is a new entrant into the ice cream industry in Bangladesh under the brand name BLOOP. The ice cream industry in Bangladesh is growing steadily around 12% per year and is estimated to reach BDT 10 billion in the 2014-15 financial year. Golden Harvest has established a brand-new factory from Tetra Pack Sweden and is operated under the supervision of an experienced Dan is the production manager. The brand offers about forty different variations, including sticks, cups, cones, calippo, sorbets, tubs, cakes and many more.

2.3 Mission, vision and value of Golden Harvest ltd

Company's Mission

Consistently deliver international standard innovative products & services for improved lifestyle.

Company's Vision

To be the most trusted and preferred brand to every household in Bangladesh.

The core values of company

The core values are Trust, Responsibility, Collaboration, Customer focus, Quality.

1. **Trust:** Our customers can trust our products because we act with integrity and do what is right.
2. **Responsibility:** We take responsibility, ensure safety of our people and products, contribute to our local communities, and care for our environment.
3. **Collaboration:** We leverage our strengths and capabilities across our organization to earn customers' respect and loyalty.
4. **Customer focus:** We are passionate about our customers and consumers and embrace their priorities as our own.
5. **Quality:** We are committed to offer the highest quality products at all times to our customers globally.

CHAPTER 3

3 Agro Processing Plant

3.1 Agro based items: (Ready to Cook and Ready to Eat foods)

1. Paratha items (Deshi Paratha, Deshi Ghee Paratha, Premium Deshi Paratha, Mega Deshi Paratha.)
2. Snacks items (French fries, Samosa, Spring Roll, Singara)
3. Meat items (Nuggets, meat ball, chicken sausages, pop chicken, chicken strips, chicken burger patty, beef burger patty, Sweet and hot wings and Drumlets)
4. 'Ready to Eat' items (Tehari, Morog Polaw, Chicken Shami kabab, Mutton Biryani, Smoked Chicken Kabab)

3.2 About Paratha production:

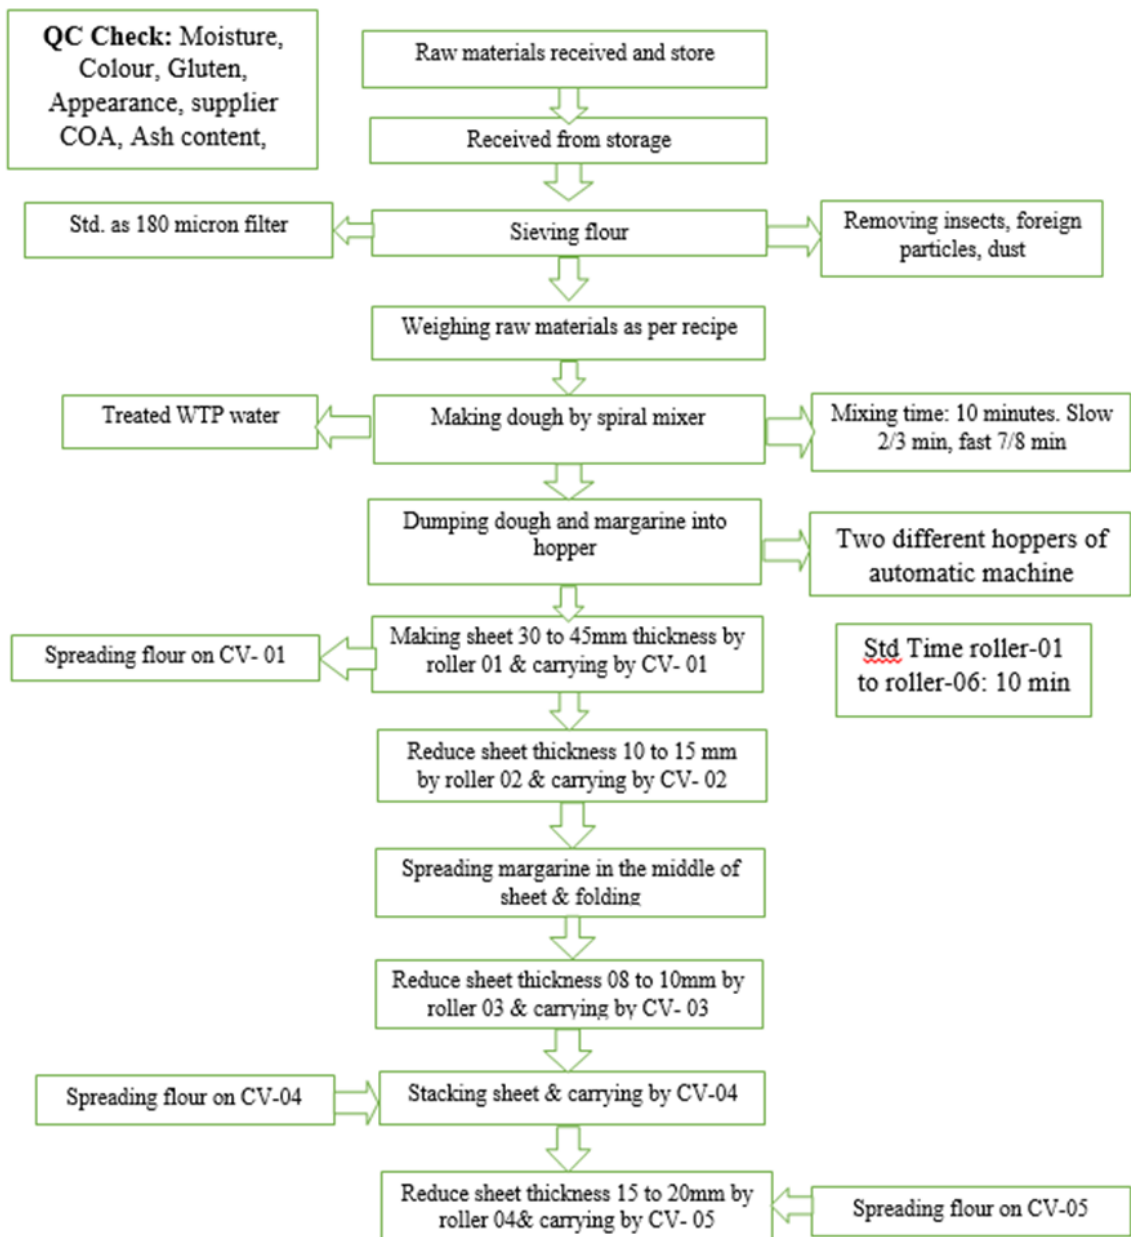

Golden Harvest Group is a diversified corporation located in Gazipur, Dhaka, Bangladesh. It produces many frozen food products. However, one of the best-selling frozen items is frozen paratha. It's a Ready-to-Cook food. About one third earning that comes from this segment. This is very famous around the world. It makes easier our daily life. It helps in our corporate life. It becomes tasty and delicious day by day. The paratha section has several types of parathas like Deshi Paratha, Deshi Ghee Paratha, Premium Deshi Paratha, Mega Deshi Paratha, Aloo Paratha and more. It contains 28 layers of paratha. The paratha spread out about 5-6 kg/cm² by Pressing machine. In products, distribution and storage division strictly maintain the proper temperature. It remains below -18°C temperature. In Bangladesh, the self-life of frozen paratha is one year. Besides Golden Harvest frozen paratha is also available in Australia, USA, Middle Eastern countries as those countries prefer processed as ready to cook food. Due to the unique characteristics of the product, Golden Harvest frozen paratha can appeal to people of different professions, ages and localities. In export, the self-life of frozen paratha is two years.

Table no. 4.4.3: Requirements for Exotic vanilla / Exotic chocolate

Requirements	Exotic vanilla/ chocolate
Production	4800 liter/hour
Overrun	100%
Cream	56 gm
Chocolate/ strawberry ripple spray	5 gm
Topping	5 gm
Peanut	1.3 gm
Cone biscuit weight	13 gm
Alu sleeve weight	2 gm
Machine	Comet c2

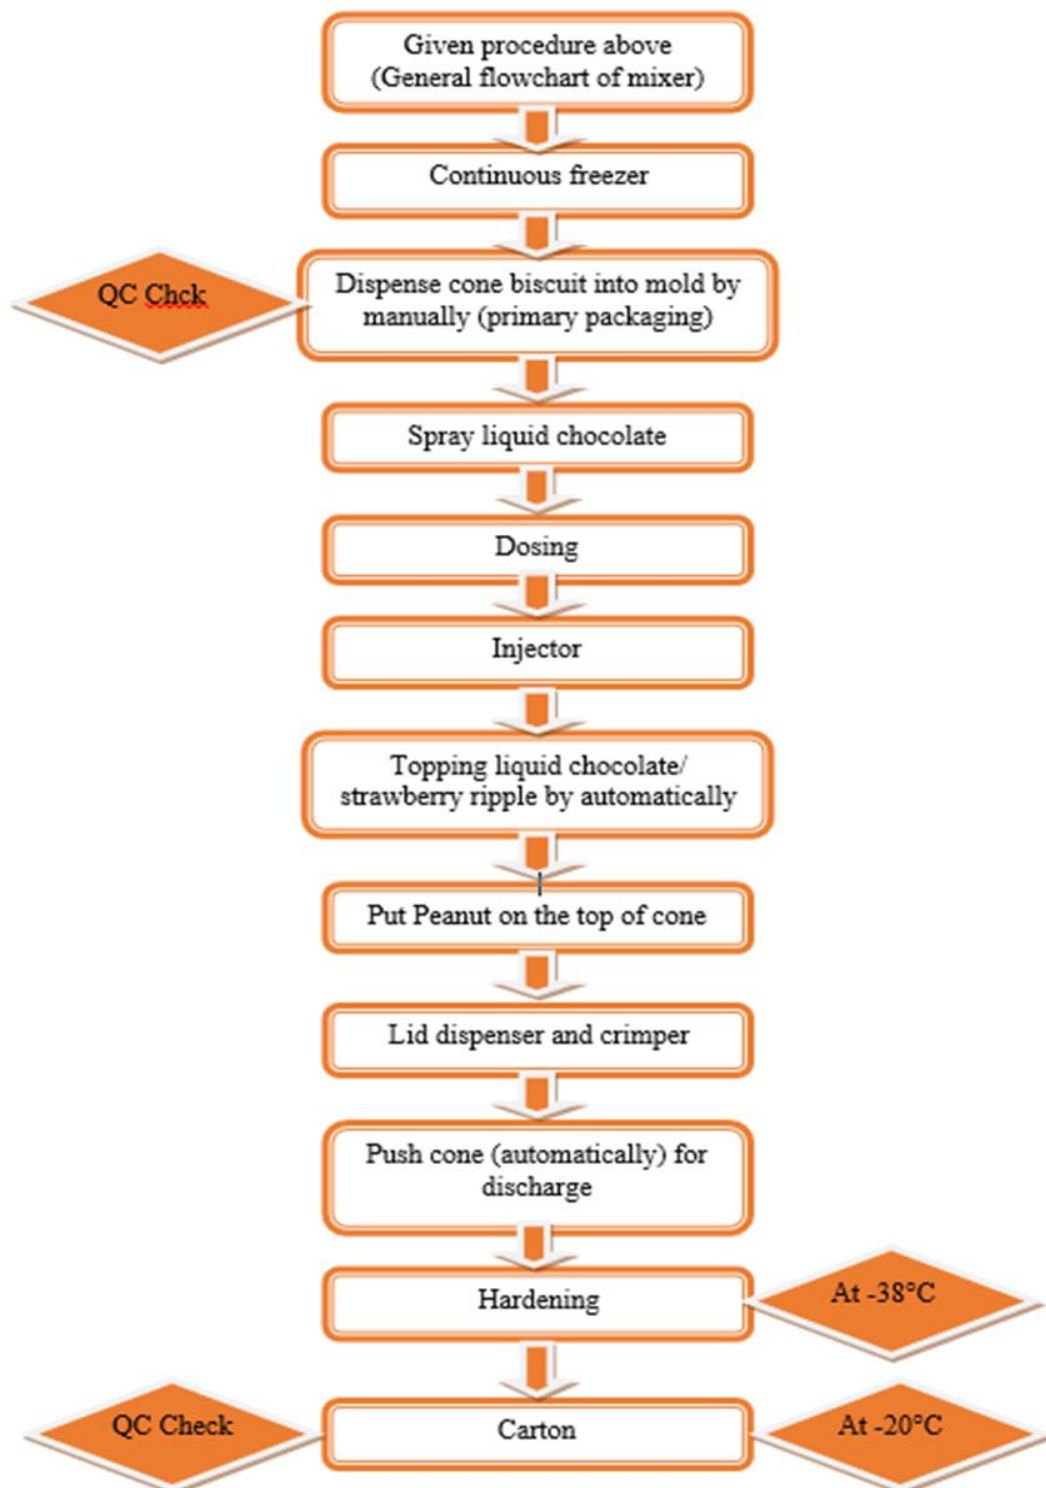

Figure no. 4.4.3: Exotic vanilla / exotic chocolate processing

4.4.4 Product details

Figure no. 4.4.4: Single sundae (120 ml)

Table no 4.4.4: Requirements for Single sundae

Requirements	Single sundae
Overrun	100%
Vanilla	54 gm
Dosing temp.	-5°C
Chocolate ripple	5 gm
Chocolate ripple temp.	32°C (std. 28 to 32) °C
Net weight	57 gm
Gross weight	76.5 gm
Machine	Comet c2
Price	35 tk

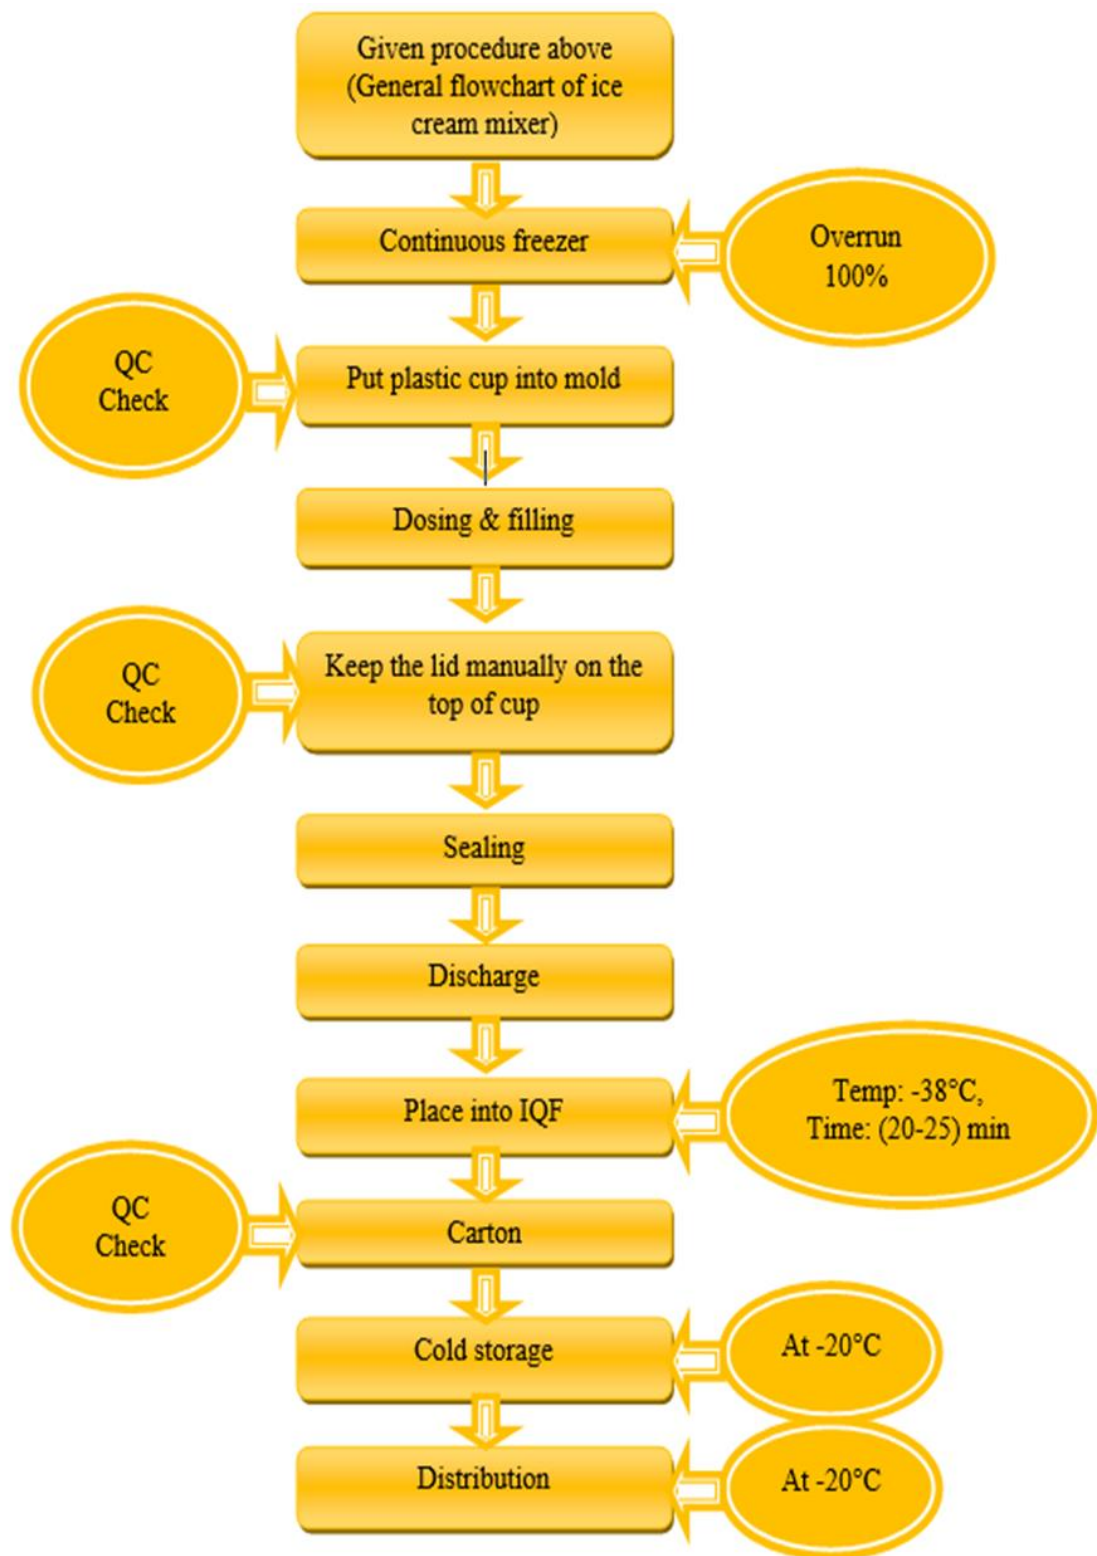

Figure no. 4.4.4: Diagram of Single sundae processing

CHAPTER 5

Lab Equipment Name

5.1 Lab Equipment's:

1. pH meter
2. Brix meter
3. Micro oven
4. Laminar airflow
5. Digital autoclave
6. Colony counter
7. Micro-scope
8. Thermometer
9. BOD Incubator
10. Water bath
11. Digital Analytic balance
12. Magnetic Hot plate stirrer
13. Moisture analyzer
14. Gluten Tester
15. Viscometer
16. Distilled water plant
17. Vortex mixture
18. Lab refrigerator
19. Stomacher
20. Glassware dryer
21. Drying oven
22. Electric muffle furnace (EMF)
23. Bunsen burner
24. Burette kit
25. Centrifuge machine

CHAPTER 6

6.1 QC parameter & test: (Agro Sector)

Table no. 6.1.1: Name of Raw Materials (Wheat flour)

Name of parameter	Standard specification
Appearance & color	Creamy white
Moisture	Max. 13%
Gluten % (wet basis)	Min. 36% for high gluten & min. 24% for low gluten.
Gluten % (dry basis)	Min. 12% for high gluten and min. 8% for low gluten.
Gluten index	80-100%
Titration acidity in 90% alcohol	Max. 0.1 % for both
Falling number	Min. 200
Protein (dry basis)	Min. 12/8%
Total ash content	0.40- 0.55%
Total insoluble ash content	0.040 -0.055%
Granularity over of 180 microns	Min. 95%
Damage starch	Max. 7%
Sedimentation value	35-40 ml
Mycotoxin	Nil
Foreign particles (Hazard)	Foreign particle free
Insect	Free
Packaging condition	Intake
MFD, EXP	As per COA
Supplier COA	Mandatory

Table no. 6.1.2: Name of Raw Materials (Potato)

Name of parameter	Standard specifications
Color	Khaki
Preferred brand	Diamond
Pcs/kg	4-5
Moisture	76-80%
Damage	Damage free
Insect cutting	Insect cutting free
Foreign particle	Free
Dust	Free
Shape	Taller
MFD/ EXP	As per COA
Supplier COA	Mandatory

Table no. 6.1.3: Name of Raw Materials: Chicken meat (Breast/ thigh/ skin)

Name of parameter	Standard specifications
Appearance and color	Characteristics and cleaned
Cleanliness	Properly clean
Disease free	Bird flu free
Water	No added water
Preservative	No preservative
Hemorrhage blood	Free
Feather	free
Smell	Bad smell free or natural smell of meat
Size and shape	As per standard
Weight / piece	Breast (160-165) gm Thigh (130-135) gm Wings (38-40) gm Drumlets (40-45) gm
Bones	Characteristics
Foreign particles	Free
MFD	As per COA
EXP	As per COA
Supplier COA	Mandatory

Table no. 6.1.4: Oil test of French fry

No.	Name of parameter	Standard specification
1.	Appearance and color	As per standard

2.	Flavor	No bad odor/ flavor
3.	% Of FFA	Max. 1%
4.	% Of acid value	Max. 2%
5.	Peroxide value	Max. 10

6.2 Ice cream sector

QC parameter: (Carton)

Physical appearance: Carton's color, brand information, logo, "Do not drop" logo, "Recycle sign", BSTI logo, BSTI code (1083), HACCP certified, Product information, manufacturing details, exp details, storing details etc.

1. **Soaking time:** 25 minutes.
2. **Carton weight:** Minimum 140 gram
3. **Carton size:**
 - a. Length: 225mm,
 - b. Width: 150mm,
 - c. Height: 145mm
4. **Ply:** Three
5. **Hole: 6, Diameter of hole:** (27-28) mm
6. **GSM (Grams per square meter) check:** (Carton has three layers)
 - a. Duplex = 250
 - b. Media = 150
 - c. Linear = 150

Procedure:

- Cut (2*2) cm= (*length* × *weidth*) from carton
- Separate 3 layers carefully from the carton.
- Take weight from each layer by analytical weight balance.
- Calculation

Formula of GSM:

Duplex/ Media/Linear = (Taken weight from D/M/L × 10000) ÷ (*Lenght* × *weight*)

7. **Corrugation:** Minimum 135%

Procedure

- Cut 10 cm (Length) from carton and collect the media layer from the carton.
- Wet with water by dropper
- Now check the increase level that how much increased (Length)

- The increasing length will be corrugation.

Note: Less corrugation effect on carton, can be broken

8. Glue flap: (20-25) mm
9. Lock length: 15 mm
10. Thickness of carton: 2 mm
11. Thickness of lamination: 20 microns (15 microns acceptable)

6.2.1 Plastic cup- 100ml

QC check:

- 1) **Printing quality:** As per company standard.
- 2) **Actual volume:** 100 ml

Procedure:

- a) Take 100 ml water into plastic cup by measuring cylinder (250 ml).
- b) Check the amount of water, if need extra water then add as needed (carefully).
- c) The extra water is 5 ml, so the actual volume is 105 ml
- 3) Weight of cup: (4±0.2) gm
- 4) Top diameter: 75 mm
- 5) Bottom diameter: 57 mm
- 6) Neck height: 13±1 mm
- 7) Neck diameter: 68.5 mm
- 8) Total height of cup: 50 mm
- 9) Wall thickness: 0.4 mm
- 10) Sheet thickness: 0.7 mm
- 11) Printing layout: check (size, weight, information)
- 12) Lid check:
 - a) Top lid: 68.5 (According to container neck diameter)
 - b) Lid sticker (Glue check) [Here GSM check is not important factor.]
 - c) Date (MFD, EXP), Batch no, Quantity, MRP.

6.2.2 Classic Choco bar ice-cream (52ml)

QC Check:

1. Wrapper check:
 - a. Type of wrap: BOPP pearled
 - b. Length of wrap: 200 mm
 - c. Width of wrap: 165 mm
 - d. Thickness of wrap: 0.4 microns
 - e. Weight of wrap: 1.2 gm
 - f. Reel length: (1200-1400) meter
2. Sticker check:

- a. Sticker thickness: 0.03 micron (by makeup solution)
- b. Core diameter of Bobbin: 76 mm
3. Layout of wrapper: Ingredients, Batch no, Date (MFD, EXP), MRP, Environment logo, BSTI logo etc.

6.2.3 Single sundae cup- 100ml

QC Check:

- 1) Check the fitting of lid with container.
- 2) Top diameter: 66 mm
- 3) Lid diameter: 69 mm

Ice-cream Box (500ml/1000ml/5000ml)

QC Check:

- 1) Should be open and close lid from the container easily/ smoothly.
- 2) Should be equal top and bottom side of box.
- 3) Dropping test.
- 4) Check if extra materials have in the box.
- 5) Check out the transparent of the box. (If easily transparent into the box, then measure the thickness of box.)

Table no. 6.2.3: Checking parameter: (Requirements for ice-cream)

Characters	Requirements for plain ice-cream	Requirements for composite ice-cream
Cream amount (Per litter)	525(min.)	540(min.)
Total solid (% by mass)	36(min.)	36(min.)
Total milk solid (% by mass)	10(min.)	8(min.)
SNF (solid not fat)	10-11	10-11
Vegetable fat/ milk fat (% by mass)	10(min.) 10% (Regular)	8 (min.) 12% (Premium)
Acidity (% by mass)	0.22 (max.)	0.22 (max.)
Sugar (% by mass)	16(min.)	16(min.)
Stabilizer/ Emulsifier	0.5 (max.)	0.5 (max.)
Total colony count (per gram)	100,000 (not more than)	100,000 (not more than)
Total coliform count (per gram)	10 (not more than)	10 (not more than)
Phosphates test of mix	Negative	Negative
Moisture (max.)	60%	60%

6.3 QC test

6.3.1 Determination of fat:

Apparatus:

- Butyrometer (Using for measuring fat content)
- Aluminum stopper
- Centrifuge machine (1100 RPM)

Reagents:

- 96% sulfuric acid
- Amyl alcohol
- Distill water

Procedure:

1. Take 0.5gm fat sample, add 10.75 ml sulfuric acid and also add 1ml amyl alcohol in a butyrometer.
2. Shake it well with aluminum stopper by hand for 2 minutes
3. Take it into centrifuge machine and carefully and also balance at 1100 RPM for 5 minutes.
4. Determined the fat content.

6.3.2

Table no. 6.3.2: Vegetable fat/ vegetable oil test

No.	Name of parameter	Standard specification
1.	Appearance	Light yellow with smooth texture
2.	Odor	Bland, neutral odor
3.	Melting points	(32-34) %
4.	Moisture	Max. 0.1% by mass
5.	Free fatty acid (FFA)	Max. 0.1% by mass
6.	Peroxide value	Max. 1
7.	Iodine value	Min. 32
8.	MFD	COA
9.	EXP	COA
10	Batch no.	Available
11.	Packaging condition	Intake
12.	Supplier COA	Mandatory
13.	Quantity	Should be mentioned

6.3.3 Determination of per-oxide value

Reagents:

- Per oxide value (Prepare solution: Chloroform 20ml, Acetic acid 10ml, total solution 30ml)
- Starch solution (Prepare solution: 0.5gm starch in 100gm boil distil water)
- Potassium iodide (Prepare solution: 8gm potassium iodide in 6gm distil water)
- Sodium thiosulfate ($\text{Na}_2\text{S}_2\text{O}_3$) – 0.01N solution prepare

Procedure:

1. Take 5gm oil. (Room temperature)
2. Add per-oxide value solution into the sample.
3. Then add potassium iodide 0.5ml solution
4. Rest in dark room for 1 minute
5. Add 30 ml distil water and 5 drops starch solution. The solution turns into light blue color.
6. Titrate the solution with sodium thiosulfate until the color will less.
7. Note the burette reading
8. Calculation.

Formula:

$$\text{Per-oxide value} = (B.R * \text{Normality of sodium thiosulfate} * \text{mass} * 1000) \div \text{sample weight}$$

6.3.4 Determination of iodine value

Reagents:

- 0.1 N silver nitrate (AgNO_3)
- 5% potassium chromate indicator (K_2CrO_4)

Procedure:

1. Take 5gm sample, add 45ml distil water (10% solution)
2. Dissolved it well
3. Then add 1ml K_2CrO_4 indicator. The color turns into pale yellow
4. Titration with silver nitrate (0.1 N solution)
5. Take the burette reading
6. Calculation

Formula:

$$\text{Iodine value} = (B.R * \text{normality of AgNO}_3 * 0.00584 * 100) \div (\text{sample weight} * 0.1)$$

6.3.5 Determination of Free Fatty Acid

Reagents:

- Ethanol
- 0.1N NaOH
- Fat sample
- Phenolphthalein indicator

Procedure:

1. Take 5gm sample in a conical flask (250 ml)
2. In another conical flask, take ethanol solution for neutralization and take (5-6) drops phenolphthalein indicator and added with 5gm sample
3. If change the color of solution, mix it well by heating.
4. Again, add phenolphthalein indicator and titrate it with NaOH solution.
5. Observe the color for 1 minute.
6. Calculation

Formula:

$$\text{FFA} = (B.R * \text{Normality of NaOH} * \text{Mass} * 100) \div (\text{Sample weight} * 1000)$$

6.3.6 Determination of Acidity

Apparatus:

- Beaker
- Dropper
- Burette with stand.
- Measuring Cylinder — 25 ml.
- Stirring Rods — glass.

Reagents:

- 0.1N NaOH
- Distill water
- Phenolphthalein indicator

Procedure:

1. Take 2ml sample with 8ml distill water into a beaker by measuring cylinder
2. Then add (4-5) drops phenolphthalein indicator.
3. Shake it well.

4. Titrate it with 0.1N NaOH by burette with stand.
5. Titration the solution until the color turns into faint pink color.
6. Calculation.

Formula:

$$\text{Acidity}\% = (\text{Burette reading} \times \text{normality of NaOH} \times \text{Mass} \times 100) \div (\text{sample weight} \times 1000)$$

6.3.7 Table no: 6.3.7: Skimmed milk/ low fat milk powder Test

Name of parameter	Standard specifications	Method
Appearance	White and free from lumps	Visual
Odor	No objectionable odor	Organoleptic
Moisture	Max. 4% by mass	Moisture analyzer
Milk fat	Min. 0.5% by mass	Garber
SNF (Solid not fat)	Min. 34% by mass	Analyzer
Titrateable acidity	Max. 18ml/0.15% of 0.1N NaOH	Analytical
Total Ash (Dry basis)	Max. 8.2%	Analyzer
Packaging condition	Intake	Visual
Supplier COA	Mandatory	Physical
Quantity	Mentioned	Physical

6.3.8 Brine test

Brine solution (60% water, 33% calcium chloride, 7% caustic)

1. pH test: (Standard: 6.4-7.4)

Procedure:

- Take brine sample in a beaker
- Now dipping the pH strip into the sample
- Match the color with pH box and record the result

2. Baume test: (Standard 31.5)

- The brine solution takes into 20° temperature by heating

- Then solution placed into a measuring cylinder (250ml) and fill it with top of the cylinder.
- Now slowly the Baume meter dip into the solution
- Take the result.

NOTE: If the result less than 31.5 then add 25 kg calcium chloride for every 0.5 of Baume scale.

3. Density: Standard (1.280-1.286)

- Take a pycnometer (25ml) and make it zero by weight balance.
- Fill with brine solution and take weight
- Calculation

Formula:

$$\text{Density} = \text{Sample weight} \div \text{volume of Pyrex}$$

6.3.9 WTP (Water Treatment Plant)

Table no. 6.3.9: Parameter of WTP

Name of parameter	Standard specification
Taste	No off taste
Odor	No off odor
Appearance	No visible color
Presence of dust	No visible dust
pH	6.4-7.4
phosphate	< 4 ppm
Total Hardness	<300 ppm
Iron	<0.3 ppm
Total Dissolved Solid (TDS)	<500 PPM

1. Total hardness test:

Reagents:

- Hardness buffer = 5 drops

- Water = 5ml
- Calmagite solution = 1 drop
- EDTA = 1ml

Procedure:

- Take 5ml water in a beaker
- Then add 5 drops of hardness buffer and 1 drop of Calmagite solution into water
- Titrate it with 1ml EDTA solution.
- Observe the color until it turns into dark violate color.
- Calculation

Formula:

$$\text{Total hardness} = (\text{Final reading} - \text{Initial reading}) \times 300$$

2. Iron test:

Reagents:

- Water = 5ml
- FE₁ = 15 drops
- FE₂ = 30 drops
- FE₃ = 1 spoon

Procedure:

- Take 5ml water in a beaker
- Add 15 drops FE₁, 30 drops FE₂ and 1 spoon of FE₃ into water.
- Shake it well
- Rest for 5 minutes
- After 5 minutes, observe the color and note down the result.

CHAPTER 7

7. CIP & COP

7.1 CIP & COP

These cleaning techniques provide processors with an additional form of process control since they each improve the sanitation team's capacity to more clean and sterilize production equipment, hence enhancing food safety and quality assurance.

CIP: CIP referred as “clean-in-place”. It is a cleaning system. It is a procedure of interior cleaning process like processing tanks, homogenizers, mixers, blenders, fillers & transfer lines. This system use in every foods & beverages factory to clean the environment and keep safe foods. In ice-cream floor using this cleaning system. There are 5 steps of CIP. And 4 steps are doing every day. (Pre-rinse, caustic wash, hot water wash, sanitizing rinse)

Step 1: Pre-rinse. (Normal water): Circulation for 15-20 minutes.

Step 2: Caustic Wash (140° – 185° F): In this process, detergent as caustic is the main ingredients to wash the surface of equipment. The efficiency of a pump can be improved by using a non-foaming formulation to assist reduce germ. In addition, it will stop tanks from being overfilled with foam when the recirculation system starts up. Caustic washes soften fats and make them easier to remove. Also known as caustic soda, sodium hydroxide or NaOH, the alkali used in caustic washes have a very high pH in a concentration range of 0.5-2.0%. Concentrations as high as 4% may be used for highly soiled surfaces.

Step 3: Intermediate Rinse (Nitric Acid): About 1.5% of HNO₃ drop in normal water and use this once in a month for (15-20) minutes.

Step 4: Final Rinse. (Hot water). About up 60°C. In freezer, wash it at 55°C hot water.

Step 5: Sanitizing Rinse. (Treated cold water).

COP: COP referred as ‘Cleaning out of place’. About 2% of chlorine & detergent with water wash in agro floor.

CHAPTER 8

8. Hazard Analysis Critical Control Point (Haccp) Plan For Industry

8.1 HACCP Plan for Industry

- 1. Good housekeeping:** Hazards in the workplace can be minimized or eliminated through good hygiene. Not only cleanliness is part of hygiene. This includes maintaining clean and organized work areas, protecting hallways and floors from tripping hazards, and removing waste (such as paper and cardboard) and hazards. Other hazards such as fire in the workplace.

- 2. Design & plant layout:** The plant has to have excellent ventilation and lighting. Air enters the building through large wire-mesh windows. In order to additionally offer good natural illumination. It is necessary to have hand washing stations with soap or other sanitizing products in the proper places. in order for employees to clean their hands before working to prevent contamination. The restroom must be located apart from the factory building or elsewhere away from the workspace. Considering how contaminated the toilet is. Separating the restroom from the plant building is necessary. Just have a quality control lab in the factory. So in the laboratory, experiments can be done as tests to test other raw materials. Tests include powder geliness and powder moisture content, oil moisture content and peroxide index, and more.

- 3. Personal hygiene:** Personal hygiene must be correct, as if the personal hygiene instructions are not followed correctly, it can be a way to contaminate the product. And

even if employees must wear a uniform, use gloves and cover their hair. Therefore, for these components it is possible to prevent product contamination. Good personal hygiene means that employees should not put their fingers in their mouth, nose, or ears and refrain from eating, chewing, spitting and smoking during food handling. Employees must wash their hands before starting work and upon returning to work.

4. **Water supply:** Good quality potable water at the desired temperature is supplied for use in processing operations and cleaning.
5. **Equipment:** To ensure a smooth-running system, all equipment must be checked on a regular basis. So that the equipment can function properly, it must be checked for cracks, rust, and dents in the machineries.
6. **Storage and transportation:** The storage room must maintain an appropriate temperature and humidity for the safe storage of raw materials and the finished product. In addition, proper equipment transportation is required.
7. **Sanitation program:** The sanitation program's goal is to maintain a sanitary environment required for the safe and legal storage and distribution of products. A cleaning program must include several components in order to be successful. The plant's cleaning program must be properly implemented, including spot cleaning the equipment and tools required to do so, so that the equipment does not become a source of contamination.
8. **Pest control program:** Rodent, insect, and bird control are all part of pest control programs. Pest removal requires more than traditional spraying techniques in pest control programs. Modern pest control programs are intended to both prevent and control pests. This should be done once a month in the plant.

- 9. Team Formation:** A HACCP team can be formed, with one member serving as the team leader. A senior quality control specialist or QA manager, a food technologist or line supervisor, a microbiologist, a purchasing agent, a stores supervisor, and a maintenance manager can make up the team.

CHAPTER 9

Conclusion

Our internship was conducted from 21st June to 28th July at Golden Harvest Ltd located at Hotapra, Gazipur, Dhaka. This factory mainly bases on two sections. One is agro sector & another one is ice-cream sector. In the agro floor, they prepare various types of snacks items, meat-based items, paratha that usually help us to save our valuable time, because they are ready to cook foods. Another one is ready to eat foods, which are Tehari, Morog polaw, Chicken shami kabab, Mutton Biriany and so on. Just heat the food and ready for serve. For these items, they used fresh vegetables, good quality of meats (chicken, mutton, and beef), flour and so on. Second sector is ice-cream floor. There are different types of ice creams. For this, they used skim milk powder, milk whey powder, fruits pulp, sugar, oil, flavor, glucose syrup, stabilizer/ emulsifier, water etc. At first, they check the quality of all raw products & final goods and assure the quality of all products or items. They follow some process for making or produce this product they have their own plant-designed flow diagram. They analysis the goods by chemical, physical & microbial tests for quality control. Major objective of this report is to identify the actual health hazard and quality control of Golden Harvest Ice-Cream (Bloop Ice-Cream), Golden Harvest Agro industries and also develop the production and quality control. We're very grateful to the director of Golden Harvest Ltd. For giving us permission to carry out this internship in his organization. We're grateful to **Md Aminul Islam Sir** as the organizational supervisor to conduct. We're also grateful to **Ashik Das** Officer-Quality Control & Microbiology and (**Md Asad Sir**) HR Admin Manager. It would have been very difficult to prepare this report up to this mark without their guidance. We would like to express our warmest thanks to Nutrition and Food Engineering Faculty members for their countless inspiration and encouragement during the student life. Finally, we wish to express immense gratitude & humbly convey our heart-felt respect to Managing Director.

Thank You
