APPROVAL

This project titled on “**Tax Payment System**”, submitted by **Md. Sadman Sakib Khan (ID: 171-35-1971)** to the Department of Software Engineering, Daffodil International University has been accepted as satisfactory for the partial fulfillment of the requirements for the degree of Bachelor of Science in Software Engineering and approval as to its style and contents.

BOARD OF EXAMINERS

----- Chairman

Dr. Imran Mahmud
Head and Associate Professor
Department of Software Engineering
Faculty of Science and Information Technology Daffodil International University

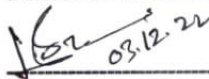

----- Internal Examiner 1

Md. Maruf Hasan
Associate Professor
Department of Software Engineering
Faculty of Science and Information Technology
Daffodil International University

----- Internal Examiner 2

Fatama Binta Rafiq
Lecturer (Senior)

Jahangirnagar University

DECLARATION

I so certify that I worked on this project under the guidance of Md. Shohel Arman, an assistant professor in the SWE department at Daffodil International University. Additionally, I affirm that neither this project nor any portion of it has been submitted for consideration for a degree or certificate elsewhere.

Supervised by:

Md. Shohel Arman
Assistant Professor
Department of SWE
Daffodil International University

ACKNOWLEDGEMENT

Firstly, I would want to thank Almighty God from the bottom of my heart for His glorious grace, which has enabled me to successfully complete the final year project. I would want to express my sincere gratitude and debt of gratitude to Md. Shohel Arman, Assistant Professor, SWE Department, Daffodil International University, Dhaka.

The completion of this assignment has been made possible by his unending patience, academic guidance, encouragement, constructive criticism, energetic supervision, insightful advice, and reading numerous subpar drafts and editing them at every level.

I would like to extend my sincere gratitude to the teachers and staff of Daffodil International University's SWE department, as well as to Dr. Imran Mahmud, Head and Associate Professor, for his gracious assistance in helping me to complete my project. I want to express my gratitude to everyone of my Daffodil International University course colleagues who participated in this discussion while finishing the assigned material. Lastly, I must respectfully thank our parents for their ongoing assistance and patience.

ABSTRACT

The compilation of an user's tax return summary or taxation details is the main objective of our project. An user registers with the all in one solution as tax payment system after completing whole paperwork process, entering all of his information, and uploading the various documents needed to create the Tax overview and make the schedule for a meeting. Once whole procedures have been completed, the admin creates Tax Overviews or Tax Returns for each client. Main administrator gets in touch with the clients and sets up a meeting to discuss various Tax Overviews-related subjects.

The consumer will be able to download his tax summary in PDF format if he has paid the preparation charge.

SECTION 1

INTRODUCTION

1.1 Project Summary

A number of developing nations have enacted taxation revisions in recent years. Such changes were spurred by local circumstances as well as the growing internationalization of economic activities. The necessity to rectify budgetary instabilities and the change from a market economy to a centralized plan were local factors hastening tax revisions. The fiscal stabilization plan has included tax reform as a key component due to the difficulty of cutting spending. To make the shift from strategy to market, it was required to replace administered rates with prices set by the market, financial controls with physical restrictions, and tax revenues with gains for the public sector.

Tax adjustments are also crucial in a world that is becoming more global. The performance and enforcement expenses of the tax system must be decreased to enhance competition and promote foreign investment. A lack in customs revenue brought on by globalization must be made up for by domestic revenues. Bangladesh's tax structure had to be altered in response to changes in growth policy. Bangladesh has a sophisticated taxation system. Bangladesh's tax structure primarily consists of a two-tier structure with an emphasis on the national and local governments. The most prevalent instances of these local authorities are counties and local councils.

1.2 Project Goals

The proposed document's goal is to outline every prerequisite for the intended Tax Payable System to the government of Bangladesh. All Bangladeshi citizens in the prospective system are part of the intended audience. They consist of, including, but not restricted to, the things that follow: Police, Officer, User, Employee of the authorities and Taxation Collector.

As the only source of project requirements, developers should refer to this document and any updates. Any requirements statements—verbal or written—should not be taken into account as genuine unless they are included in this document or a revision of it.

This document and any updates to it should be used as the main channel by Government Employees, Tax Officers, Police Officers, and Taxpayers to converse verified requirements to the development team . The group responsible for development anticipates having a lot of in-person discussions, many of which will probably center on requirements and potential requirements. Please be aware that the system's scope will only be determined by the criteria that are stated in this document or a subsequent modification.

1.3 Calculating Taxes

Government employees, tax officers, police officers, and taxpayers should use this document and any changes to it just like the principal method of communicating verified specifications for the creation of group. Main Core dev ops lead anticipates having a lot of in-person discussions, many of which will probably center on requirements and potential requirements. Please be aware that the system's scope will only be determined by the criteria that are stated in this document or a subsequent modification.

1.4 Beneficiaries & Benefits

The advantages of this solution are positive. They are highlighted below:

- Improved revenue allocation,
- Effective revenue gathering,
- Easy-to-use services,
- Enhanced rate of collecting,
- Standard solutions across the board for all tax categories,
- Comprehensive solution covering all forms of income,
- A considerable decrease in expenses,
- Faster Revenue Gathering.

1.5 Objectives

- Construct The assignment on a compact cloud generator.
- Individuals can utilize this as their impending tax obligations.
- Increase public awareness to support the development of our nation.
- Simplify tax computations and payments for individuals across all occupations.

1.6 Stakeholders

In our solutions, there are three different kinds of stakeholders. Those are:

- **District officer**

The District Officer, who plays this role as the main character in TPS, is responsible for carrying out large and delicate tasks. The District officer will verify and examine each step of the Tax Payable System process. Work of the Audit Police officers and a report on User details.

- **Police Officer**

Police officers have a secondary essential role in the TPS; they can review User reports and audit data on User properties.

- **The User**

Because it is the major actor in our system, the role of a User is also one of utmost importance. A User can register in the system and provide verified information to determine the maximum amount they must pay. could view his/her report, as well as follow the progress of their Tax Payable System at home. The tax can be paid by credit card or an online or mobile banking system.

1.7 The Project Timeline

Every project must follow its schedule in order to be completed within due timeline.

1.8 The Gantt Chart

It is a picture representation of a planned overtime work. It is an effective technique to be displayed the project that's scheduled to be performed just in given time. It is helpful as we can see when my project starts and ends.

Actions		W 1	W 2	W 3	W 4	W 5	W 6	W 7	W 8	W 9	W 10	W 11	W 12	W 13	W 14	W 15

1.9 Project Schedule

Below is a timeline record for the project:

Task	Date
Seminar for Topic Selection	20/10/2022
Project Topic and Name Selection Brainstorming	10/11/22-19/11/22
project proposal submission	28/10/2022
Specification of Requirements	02/01/2022 – 29/01/2022
Mid Term Defense	25/02/2021
Design and Analysis of Systems	23/11/2022 – 28/11/2022
Improvement System	23/11/2022 – 30/11/2022
System evaluation	22/11/2022 – 29/11/2022
Finished Project	30/11/2022

Table 1.9 Project Schedule

SECTION 2

SPECIFICATION FOR SOFTWARE CRITERIONS

Operational Criterion: The User

Criterion Identity	OC.USER.1
Criterion Name	Log in
Body	By using their user name and password, tax payers can log in

Criterion Identity	OC.USER.2
Criterion Name	Tax Calculation
Body	The User can compute taxes

Criterion Identity	OC.USER.3
Criterion Name	Choose an evaluation form
Body	The Client Can Provide Tax Data in the Evaluation From

Criterion Identity	OC.USER.4
Criterion Name	Tax Refund
Body	The client may pay taxes

Criterion Identity	OC.USER.5
Criterion Name	Choose data
Body	The User can view their tax information

Operational Criterion: Police Officer:

Criterion Identity	OC.PO.1
Criterion Name	Log in
Body	Using a user name and password, Police Officer can log

Criterion Identity	OC.PO.2
Criterion Name	Check out User Submission
Body	All User submissions are visible to the police officer

Criterion Identity	OC.PO.3
Criterion Name	report for the User
Body	Police Officers May submit reports

Operational Criterion: District Officer:

Criterion Identity	OC.DO.1
Criterion Name	Log in
Body	The user name and password for District Officer will allow access

Criterion Identity	OC.DO.2
Criterion Name	User assessment return
Body	All taxpayers can be assessed by the district officer

Criterion Identity	OC.DO.3
Criterion Name	Take Action for user
Body	A Local Officer can take steps for a user

2.1 Implementation Standards

The dependability criterion includes availability, safety, security, and reliability, however reliability is the most crucial factor. These prerequisites are also necessary.

2.2 Dimensional Criteria

The gadget must manage both types of user data.

DC-1	System can manage a lot of data
Description	The system must support a vast variety of data set prototypes.
Stakeholder	District Officer

2.3 Demands For Dependability

Reliability is measured in four dimensions. Only a few examples are safety, security, reliability, and availability. Therefore, these four dimensions must be met by our device.

2.4 Dependability Conditions

Dependability is the probability that a machine will function without issue.

DC-1	There should be a system that active for 24/7
Description	The system needs to be constantly accessible, up to current and phishing free.
Stakeholder	N/A

2.5 Criteria For Acceptance Failures

In order to be Failure-tolerant, it is essential to guarantee 0% crash and proper performance for customers.

FTR-1	The system controls all user data without a single hardware bug.
Description	Our system will be used simultaneously by both users, so it must handle requests flawlessly.
Stakeholder	NO

2.6 Critical Criteria For Safety

My project does not have any safety-critical requirements..

2.7 Maintenance and Sustainability Criteria

The provision of post-purchase support or services to clients is crucial.

2.8 Criteria For Upkeep

DC-1	Project facilitates customer administration
Description	It is really crucial
Stakeholder	District Officer

2.9 Criteria For Supportability

There are various prerequisites for supportability. Those are:

- Maintainabilities
- Configurabilities
- Compatibilities
- Serviceabilities

2.10 Criteria For Flexibility

There is no requirement for customization in my project..

2.11 Security Conditions

It is impossible to exaggerate the significance of security requirements for device solutions. It ought to be based on actual requirements. Application system security is an issue of software protection. Regarding protection, there are some guidelines. Those are:

- Enter a User, police officer, or district officer.
- Get access based on who is currently logged in.
- Sign off as a User, district officer, or police officer.

2.12 Log in Criteria

There are no admissions criteria for my project..

2.13 Integrity Conditions

My project does not have any provisions for authenticity.

2.14 Criteria For Privacy

In any plan, privacy guidelines must be established. Anyone can register by confirming their details and protecting their privacy with their accessibility settings.

2.15 Criteria For Human-Interaction

Making a device user-friendly and simple to operate is the main objective of every gadget solution.

2.16 Demands For User-Friendliness

Our Solution is simple to use and comprehend.

DUF-1	The user must find the system straightforward to use
Description	This approach makes system management simple for the user
Stakeholder	District Officer, Police Officer and The User

2.17 Criteria For Understanding

The parameters of my project are unclear.

2.18 Accessibility Specifications

My project lacks certain usability standards.

2.19 Criteria For User Guides

For my project, user documentation is not required.

2.20 Criteria For Training

There are no training requirements in my project.

SECTION 3

THE SYSTEM DEVELOPMENT & RESEARCH

3.1 Use Case Diagram

Two actors are depicted in our use case diagram. I can build my project with the aid of this

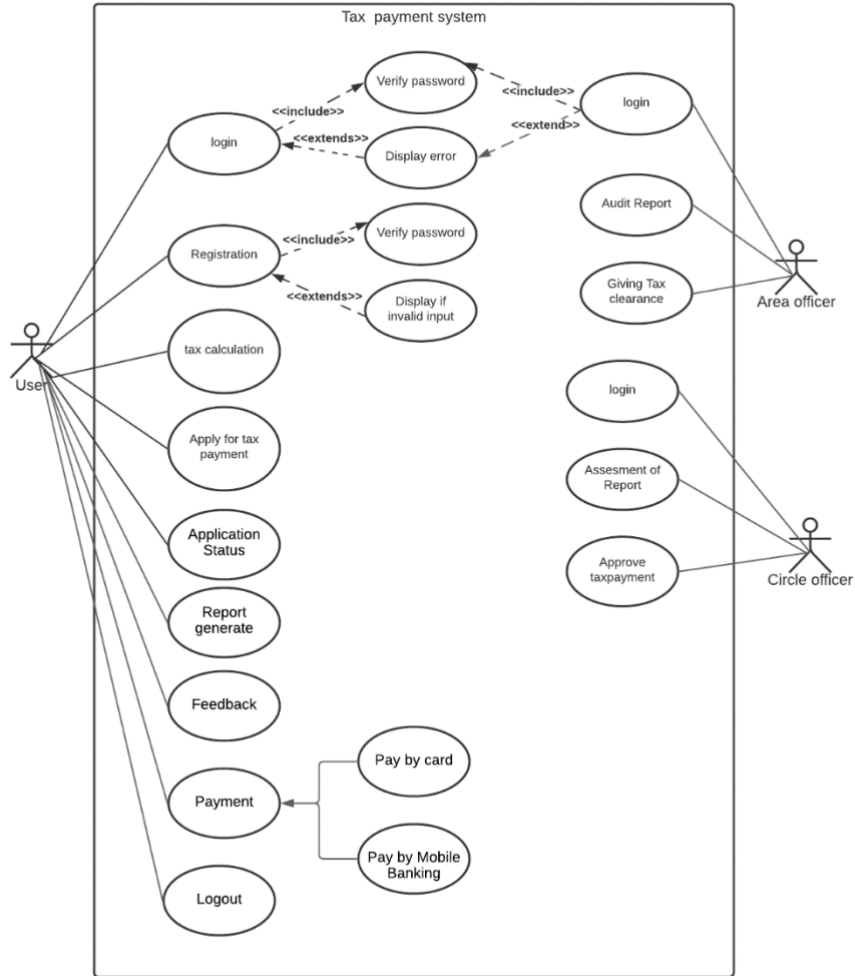

diagram.

Figure 3.1: Use case for Tax Payable System

3.2 Use Case Summaries

3.3 User Summaries

Use Case name :	The User
Summaries:	Data provided by the User, Filed a tax return, calculated taxes, and paid taxes
Actors:	The User
Priorities :	<ol style="list-style-type: none">1. A Registered User is Required2. Information that must be submitted3. Taxes Must Be Calculated
Following conditions :	<ol style="list-style-type: none">1. The User must choose the Payment Gateway option2. Check Reports
Flow:	<ol style="list-style-type: none">1. Account for User Registration and Payment2. Choose Tax returns details3. Input every Details4. Calculate the tax due5. Remittance of taxes6. See Remarks And/or reports
Differential Flows:	If the User chooses to pay with a credit card or mobile banking at step 5 of the standard flow.
Exclusivity :	
Conditions :	The execution of the use case cannot begin unless the following requirements are met <ol style="list-style-type: none">1. Registered user required2. Required Fields for Tax Return Information

3.4 Police Officer Summaries

Name of Use Case:	Police Officer
Description:	User Data for Police Officer Assessment and Report Submission
Actors:	Police Officers
Priorities :	A registered officers is required
Following conditions :	
Flow:	<ol style="list-style-type: none"> 1. Logging onto their portal, Police Officer 2. Click here for user details 3. Document for User Assessment Returns 4. Produce Documents
Differential Flows :	
Exclusivity :	
Conditions :	<p>Before the use case is executed, the following requirements must be met</p> <ol style="list-style-type: none"> 1. Be required to register

3.5 District Officer Description

Use Case Name:	District Officer
Summaries:	Officer in the District can see the Evaluation Data, the Payable Affected User Information, and the Steps
Actors:	District Officers
Priorities:	1. A registered officer is required
Following conditions:	
Flow:	<ol style="list-style-type: none">1. Signing into the district officer's portal2. Click here for User profile3. View Evaluation Files4. Be Doing something
Differential Flows:	
Exclusivity:	
Conditions:	Before the use case is executed, the following requirements must be met <ol style="list-style-type: none">1. Be Required to Register

3.6 Activity Diagram

3.7 The Activity of User Registration

Users who accurately fill out the registration form must first validate their email address.

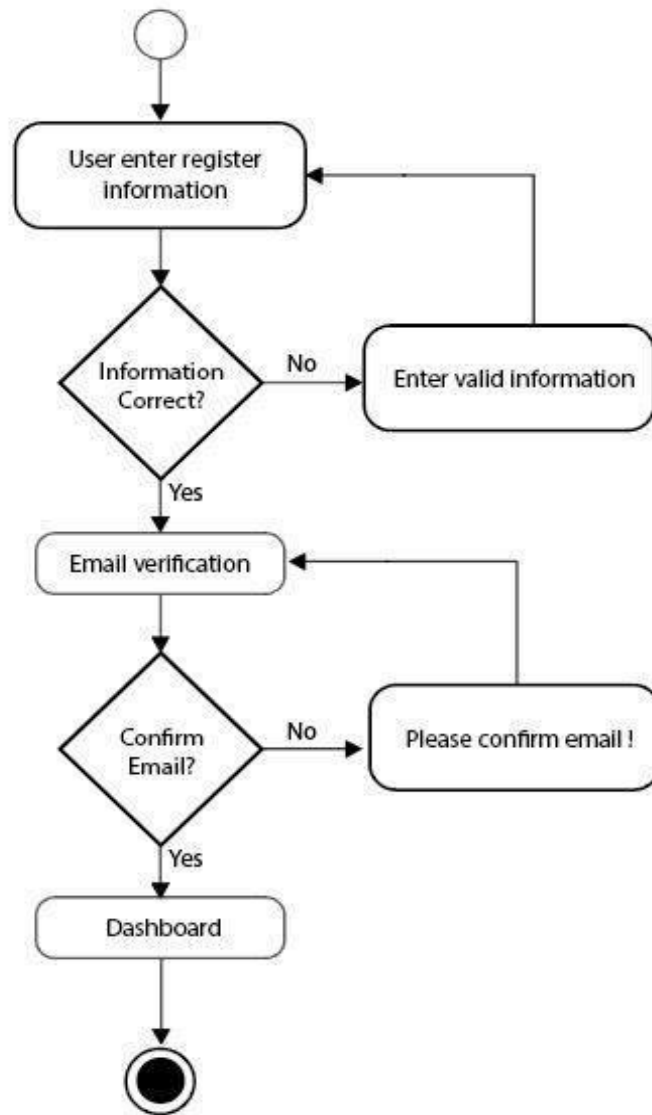

Figure 3.7: Diagram of The Activity of User Registration

3.8 The activity of the user logging in

With just their password and email address, users can log in.

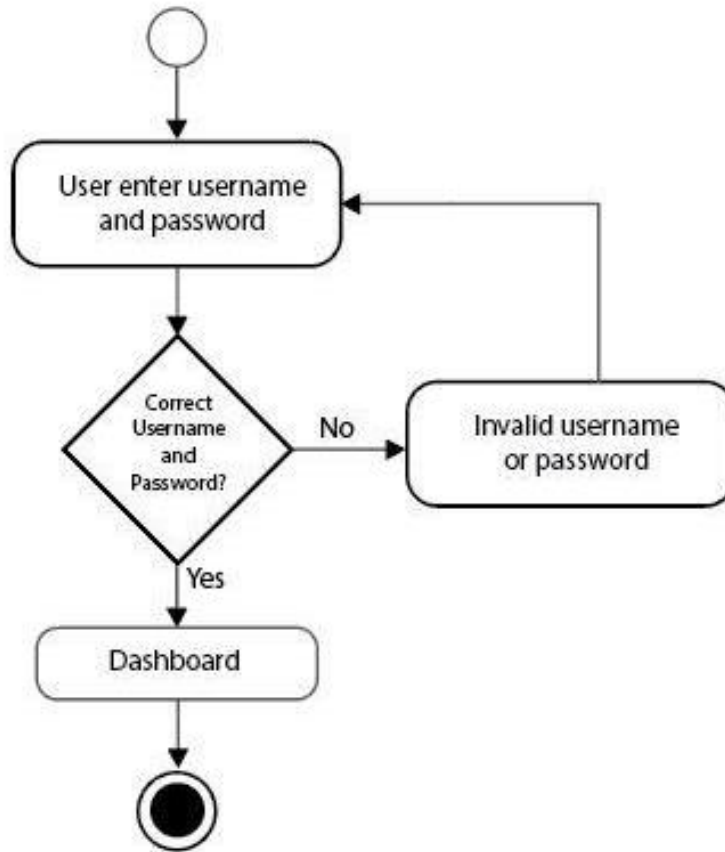

Figure 3.8 The activity of the user logging in

3.9 The Activity of User Tax Calculation

This technique will be used to determine the user's tax obligation.

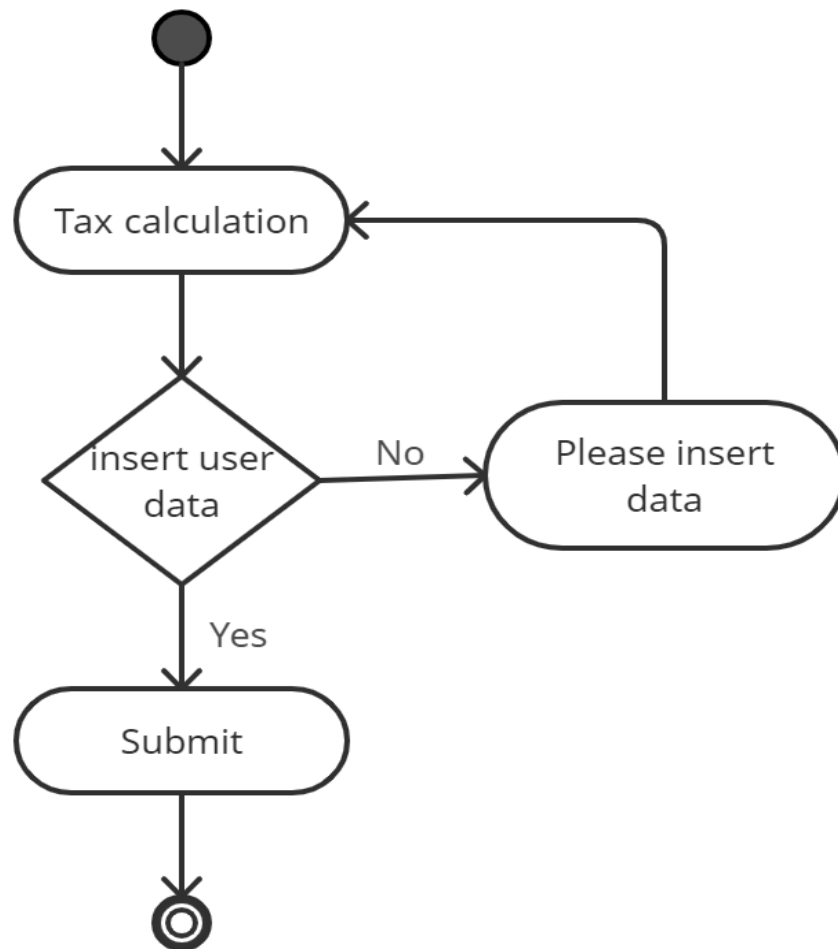

Figure 3.9: Diagram of The Activity of User Tax Calculation

3.10 The User Requests Payment Activities

For Tax Payable System, the User must provide accurate information.

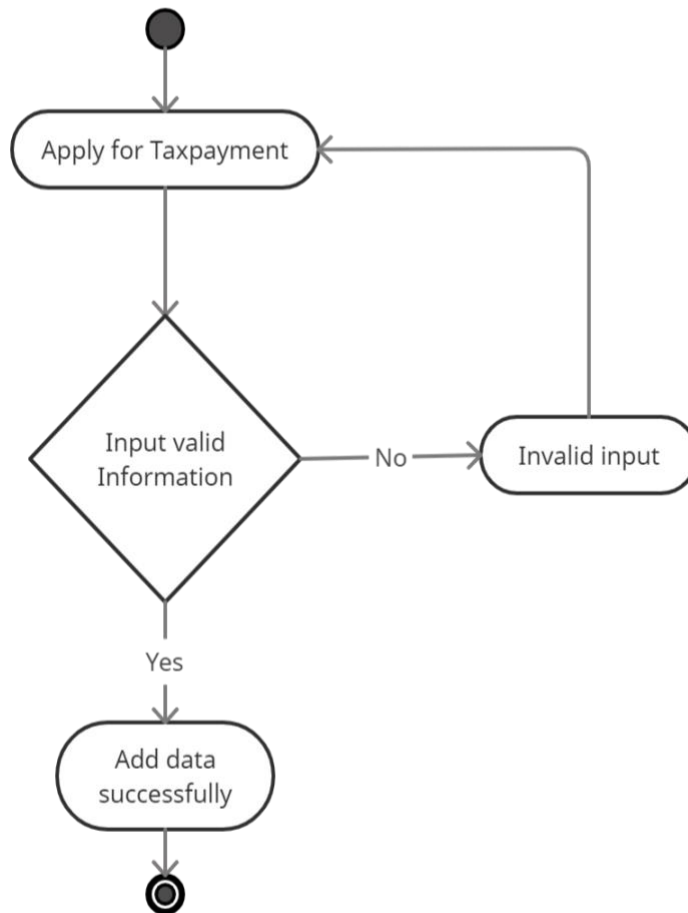

Figure 3.10: Activity Diagram for The User Requests Payment Activities

3.11 Audit Report Activity

Reports are subject to admin review.

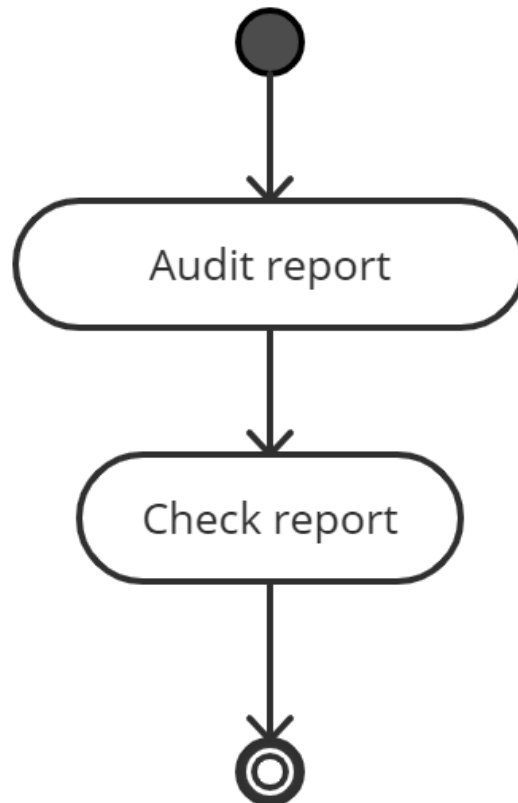

Figure 3.11: For an audit report

3.12 Providing a tax computation task

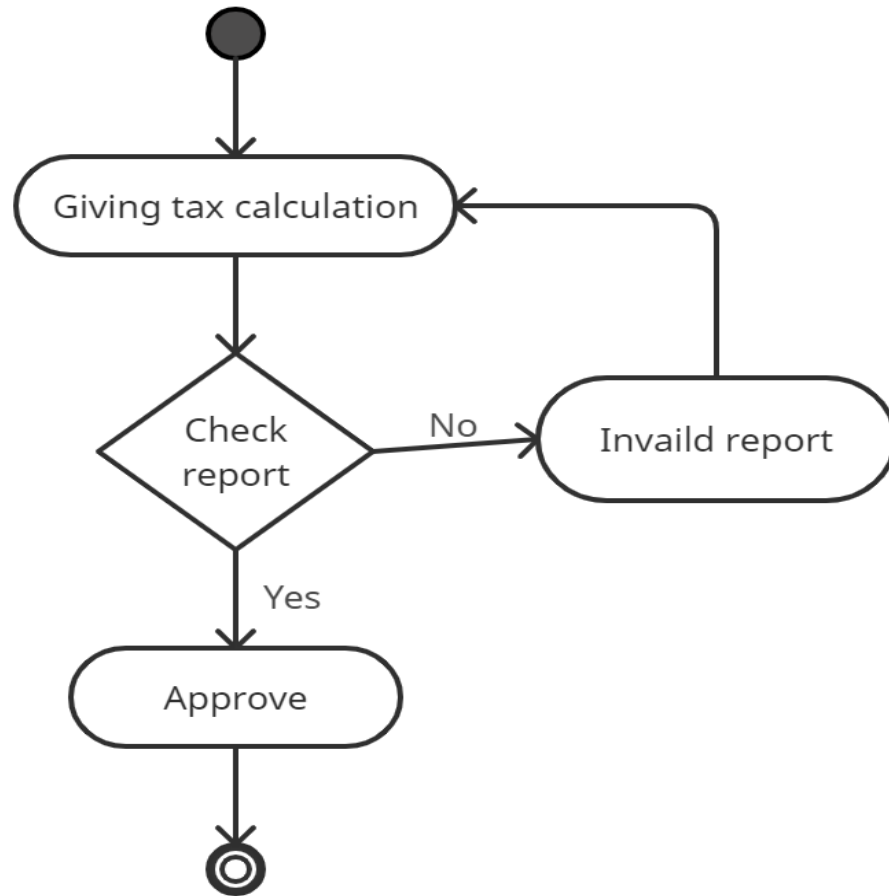

Figure 3.12: Providing a tax computation task

3.13 Report on Evaluation Task

You can use this technique to find out if the user is making their tax payments on date.

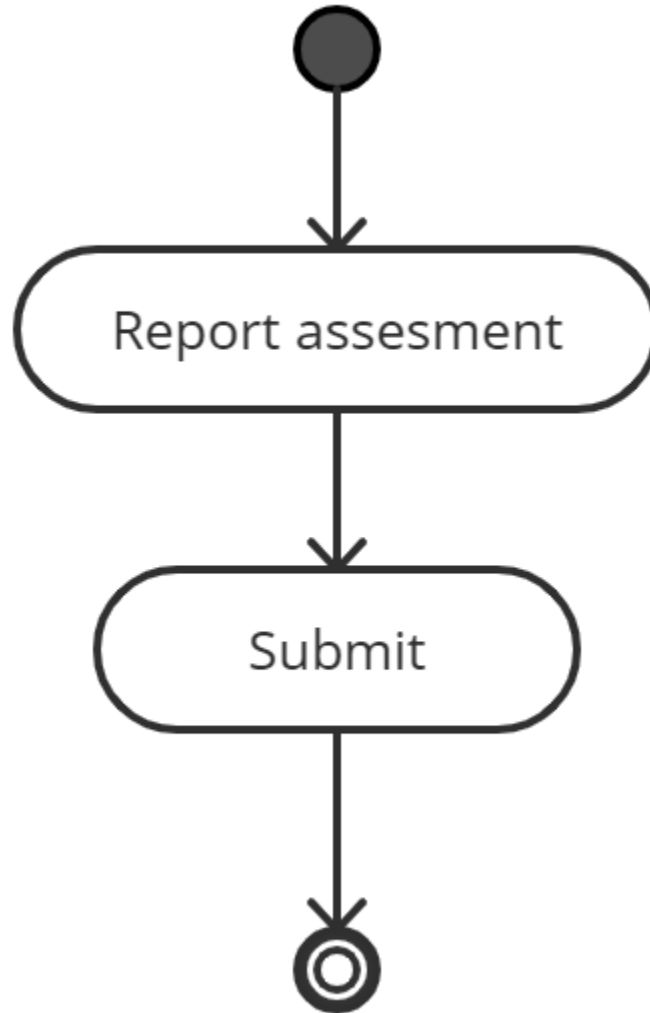

Figure 3.13: Diagram of the Report on Evaluation Task

3.14 Payment Activity

The Users have the option of using cards or mobile banking to pay.

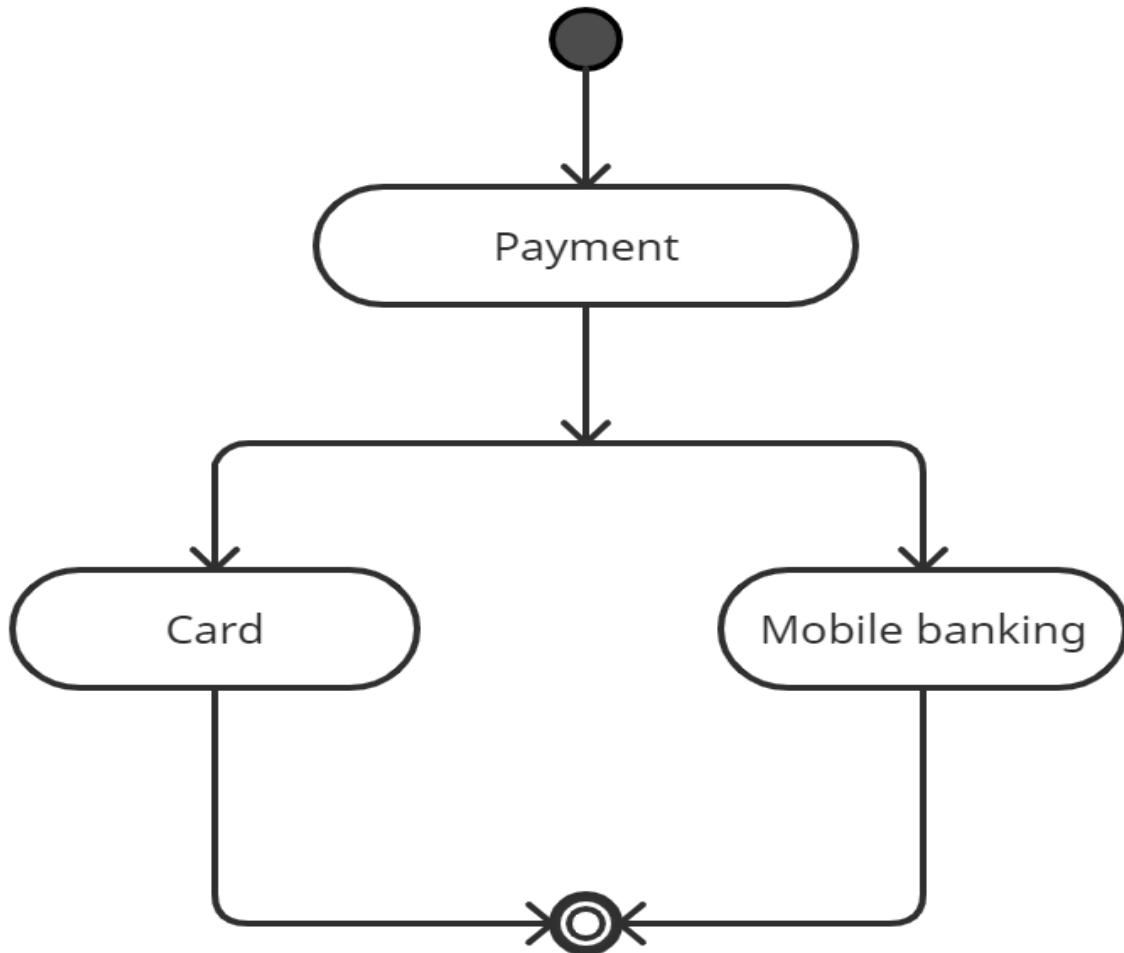

Figure 3.14: Payment Activity

3.15 Reaction Exercise

Using this method, the user will offer comments.

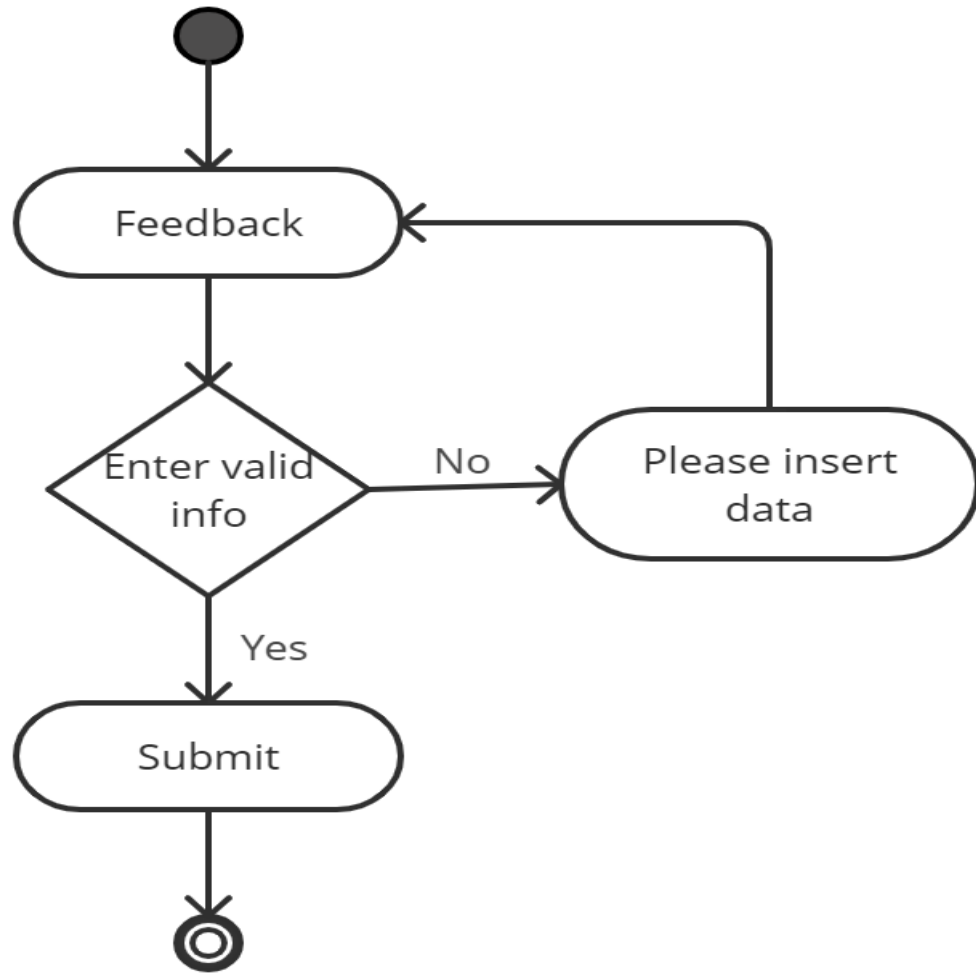

Figure 3.15: Diagram of Reaction Exercise

3.16 System Sequence Diagram

3.17 The User login

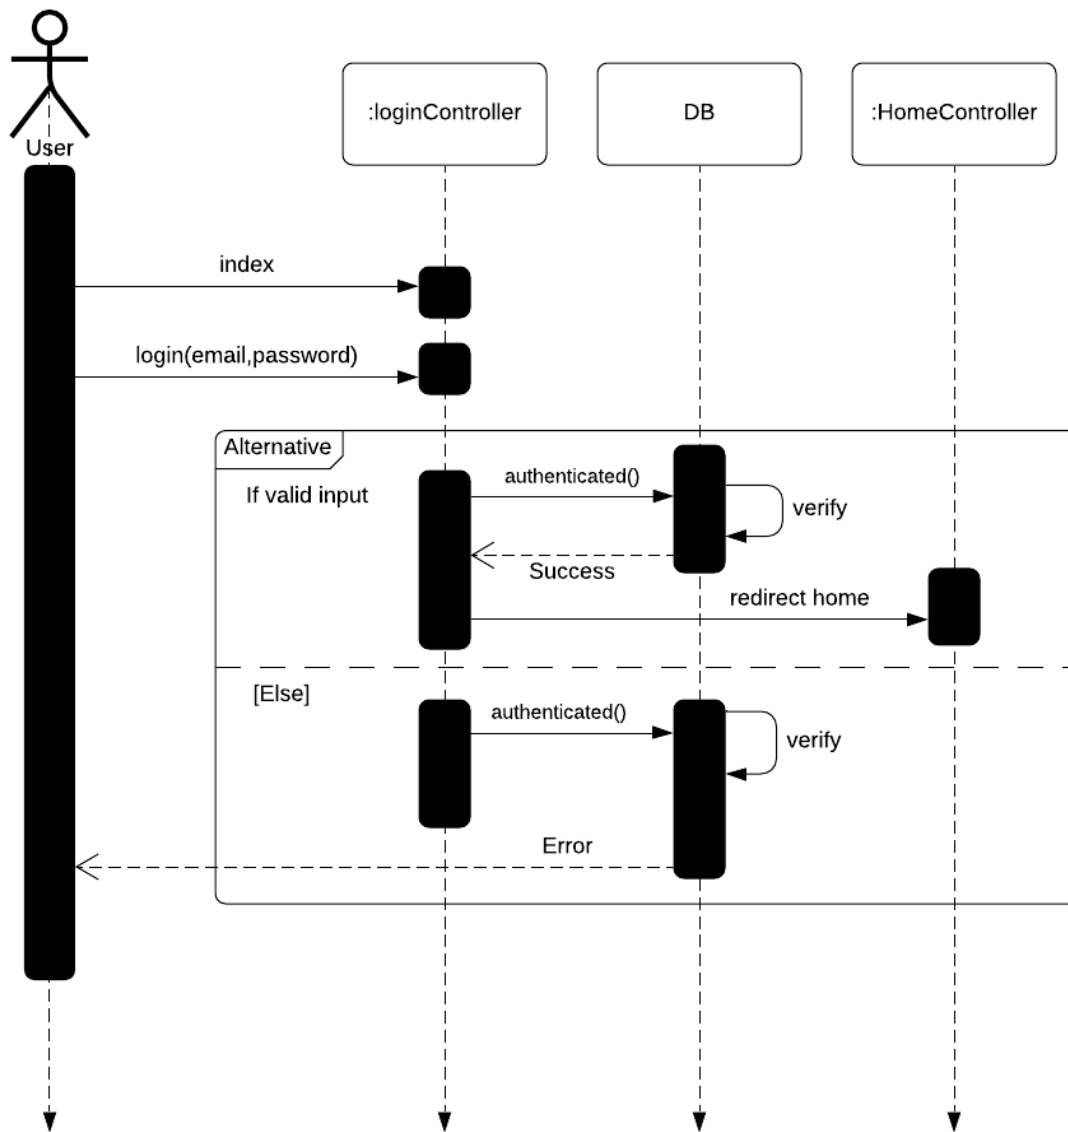

Figure 3.17: Login sequence diagram for the users

3.18 The User register

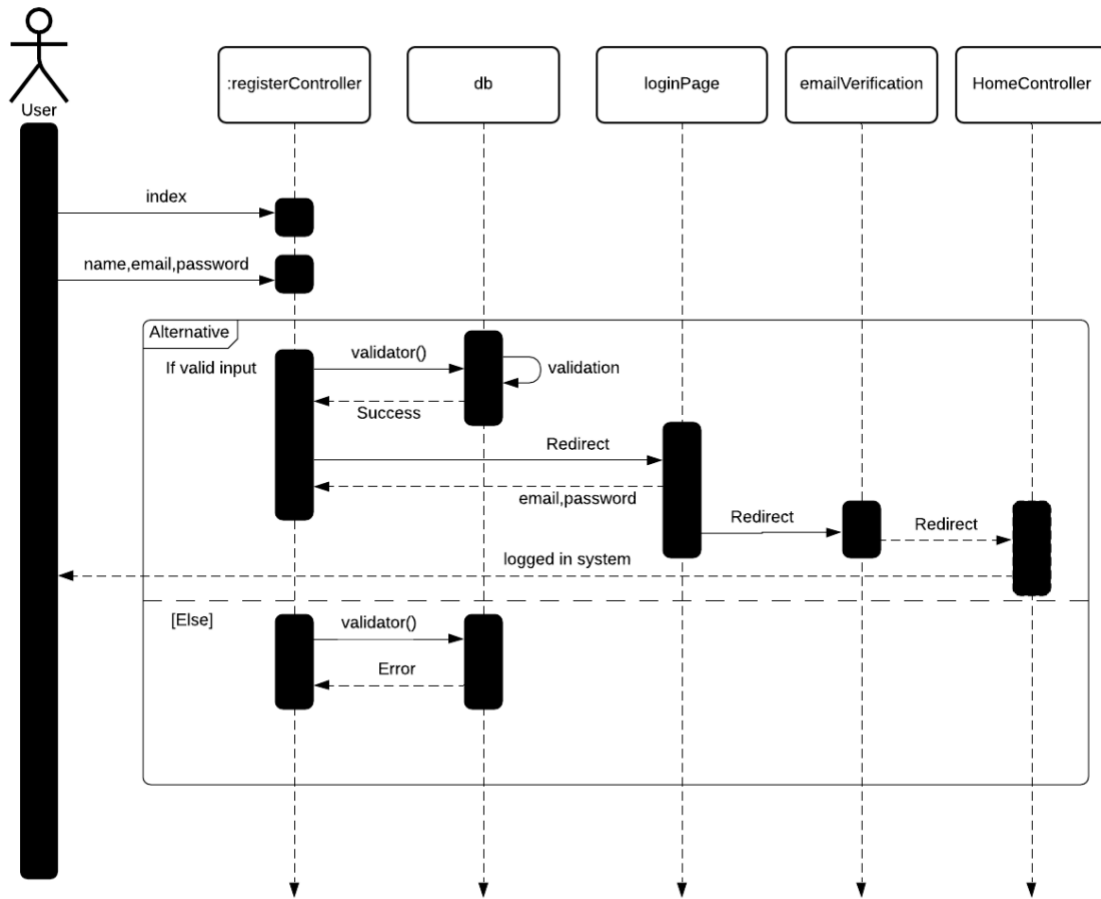

Figure 3.18: User registration Flow Diagram

3.19 The User (tax payer)

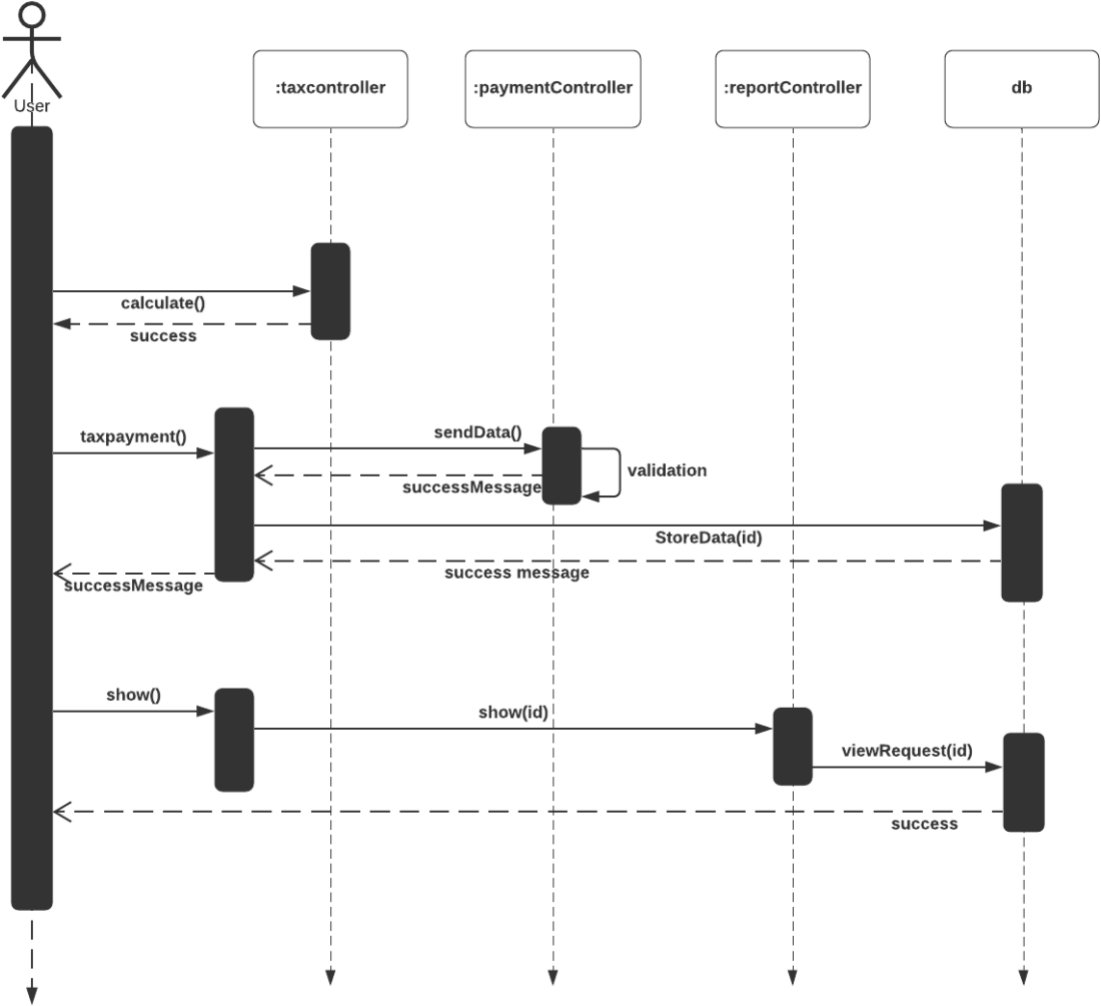

Figure 3.19: User Sequence Diagram

3.20 Police officer

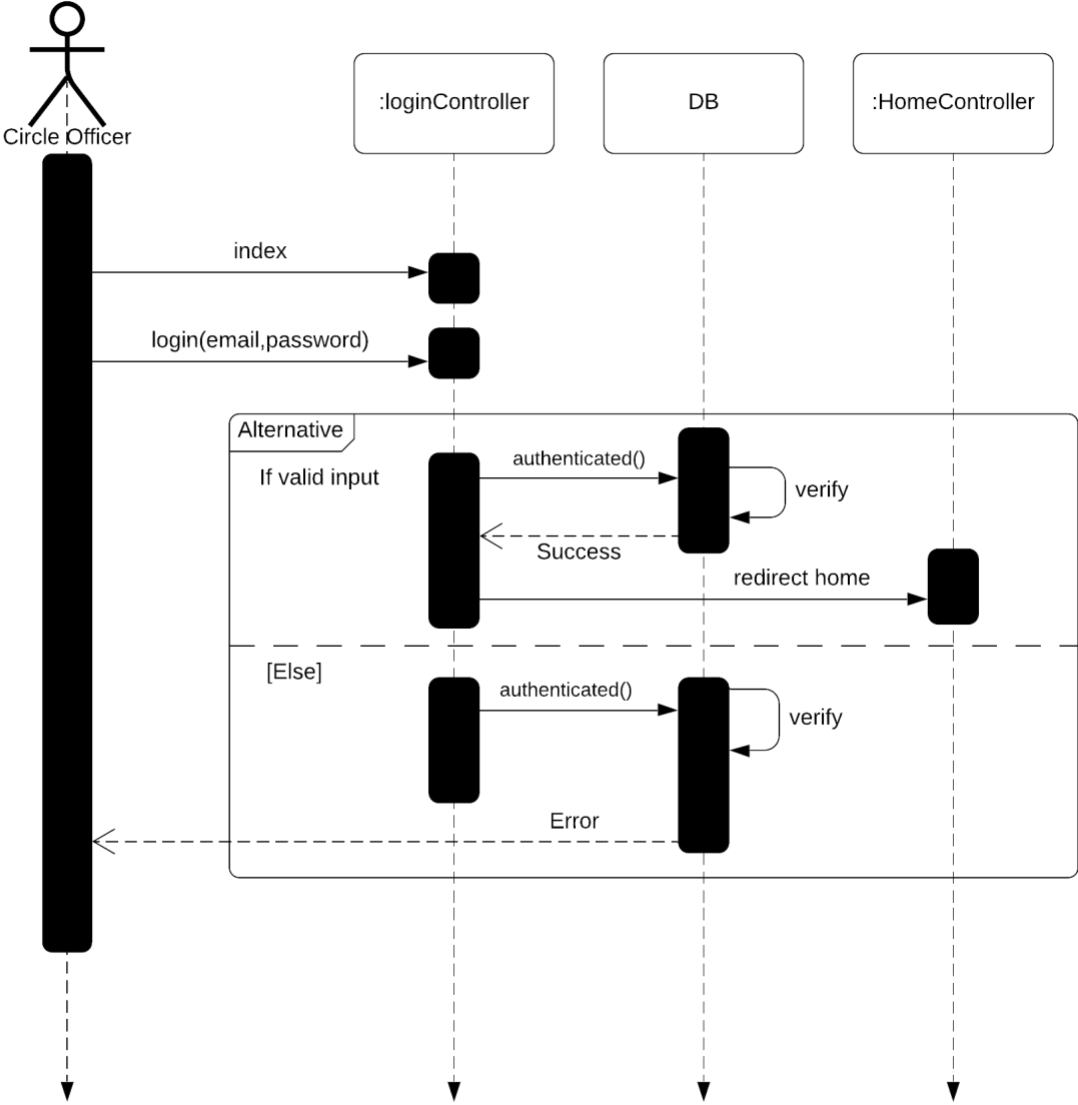

Figure 3.20: Police Officer Sequence Diagram

3.21 District Officer

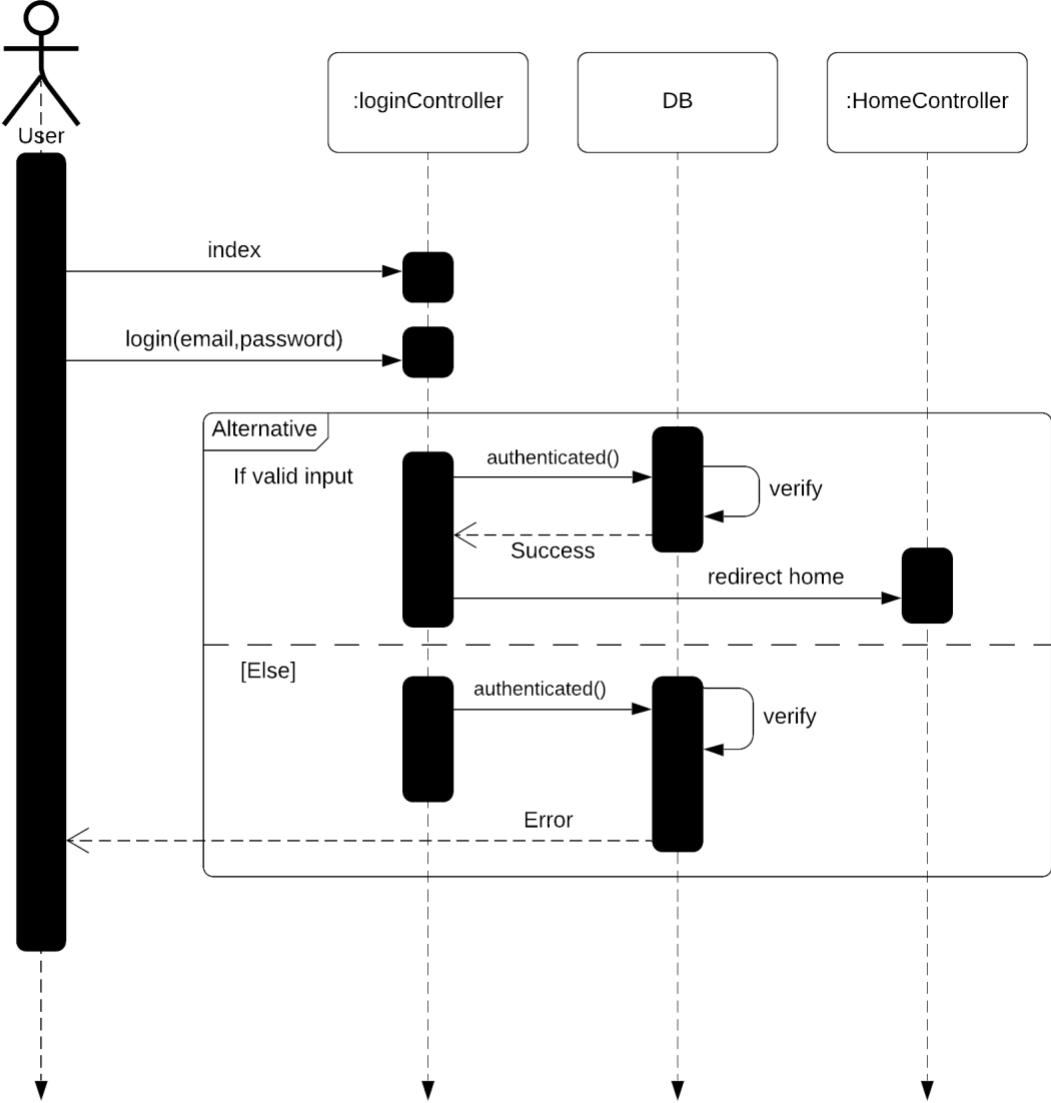

Figure 3.21: District Officer Sequence Diagram

3.22 System Entity Relation Diagram

Figure 3.22: Entity Relation Diagram

3.23 Constraints in Design and Implementation

3.24 Framework or Language for Software:

A bootstrap prototype and the Laravel framework are used to create the "Tax Payable System" user interface, while a MySQL database houses the data.

3.25 Development Technologies and Tools:

- IDE: Sublime Text
- Database: MySQL
- USER INTERFACE: HTML, CSS, Bootstrap, JavaScript
- Framework: Laravel 6
- Language: PHP
- Web-Server: XAMPP Server

3.26 Project Management

3.27 Model for Software Process

The first Process Model to be adopted was the Waterfall Model.. In a waterfall model, there is no overlap between the stages; Every stage needs to be finished before moving on to the next. The waterfall model was the first software development life cycle method. Using "The Waterfall" technique, the complete software manufacturing process is split into phases. One step's outcome forms the basis for the one that follows. This implies that the beginning of the subsequent step of the production process occurs only after the completion of the preceding stage. Under the waterfall model, the steps of conception, initiation, analysis, design, construction, testing, production/implementation, and maintenance are all seen as continuously flowing downward (like a cascade).

Often called a model of the linear sequential life cycle, the waterfall model, illustrates the software development process as a linear sequential flood.

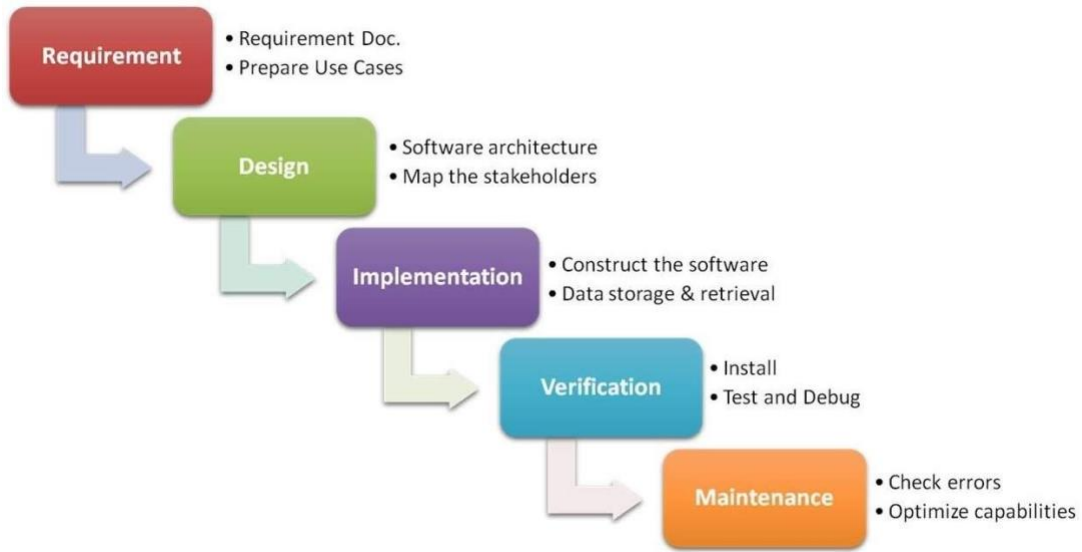

Figure3.27: Waterfall Model

SECTION 4

TESTING OF THE SYSTEMS

4.1 Testing features

Making sure there are no faults in the system and that the actual results match the intended ones is the process of testing. One approach to provide flexibility for a project or modification that is currently underway is to test features.

4.2 Testable characteristics

The following characteristics are included:

- Login
- Calculating Taxes

4.3 Testing Techniques

Test methodologies use a distinct approach to each component of the software. It is a thorough set of instructions for completing the scenario's steps and the test. It illustrates the methodology to be used as well as the modules that require examination.

4.4 Test Method

Verification is one of the most important aspects of any software project. It shows how useful applications are. It assists in finding bugs and problems in programs as well. The user consequently believes that the software is straightforward and error-free. I manually assessed and validated each piece of work without utilizing any automated technologies.

4.5 Testing Category

- Testing for Intergration
- Testing of Modules

4.6 Success/Failure Standards

The test engineers will decide what passes and fails in the test. It all depends on how well each criterion cooperates with the others. A test will be considered successful or unsuccessful whenever the results are satisfactory. I'm positive that I'll graduate with honors in any situation. Incorrect performance of a function during testing would be regarded as an error.

4.7 Environment for Testing

There are a few crucial places to prepare for testing

- System of Operations
- Web Browser
- Operating System
- Usage
- Database management system
- Test information
- Data Set

4.8 Test Cases

T.C. No-1 (Integration Examination)

T.C. Identity.1	Dataset name: The User, Police Officer & District Officer
Priority of Test: High	Test Date: 26.11.2022
Test Description: Validating the Officer's and User's Email Address and Password	Test carried out by: Md. Sadman Sakib Khan
Description: Examine the officer's and user's login page	Test executed date: 26.11.2022
Priorities:	Users must have a valid password and email address.
Test steps:	<ol style="list-style-type: none">1. Visit the login page2. Enter a valid email address & password3. Select the Sign in button
Test Data:	User's: Email: userabcd@gmail.com Password: abcd Officer's: Email: sadman@gmail.com Password: abcd45685
Goals Anticipated:	It's imperative that the user can log in
Realistic Outcome:	User successfully logged in
Pass/Fail status:	Passed
Following-condition:	User Logged in Successfully

Table 4.8.1: T.C. For User and Officer

T.C. No-2 (Module Examination)

T.C. Identity.2	dataset name: Calculating Tax
Priority of Test: High	Test Date: 26.11.2022
Test Title: Add teacher with validation	Test executed by: Md. Sadman Sakib Khan
Body: Tax Calculation	Test executed date: 26.11.2022
Priorities:	User needs to log in and enter correct data
Test procedures:	<ol style="list-style-type: none">1. Once logged in, select Tax computation2. Click to calculate taxes3. Enter data into each field4. Press the Submit button
Test Data:	
Goals Anticipated:	Successful User Addition
Realistic Outcome:	Successful User Addition
Pass/Fail status:	Passed

Table 4.8.2: T.C. for Add Teacher

SECTION 5

MANUAL FOR USERS

5.1 Page One

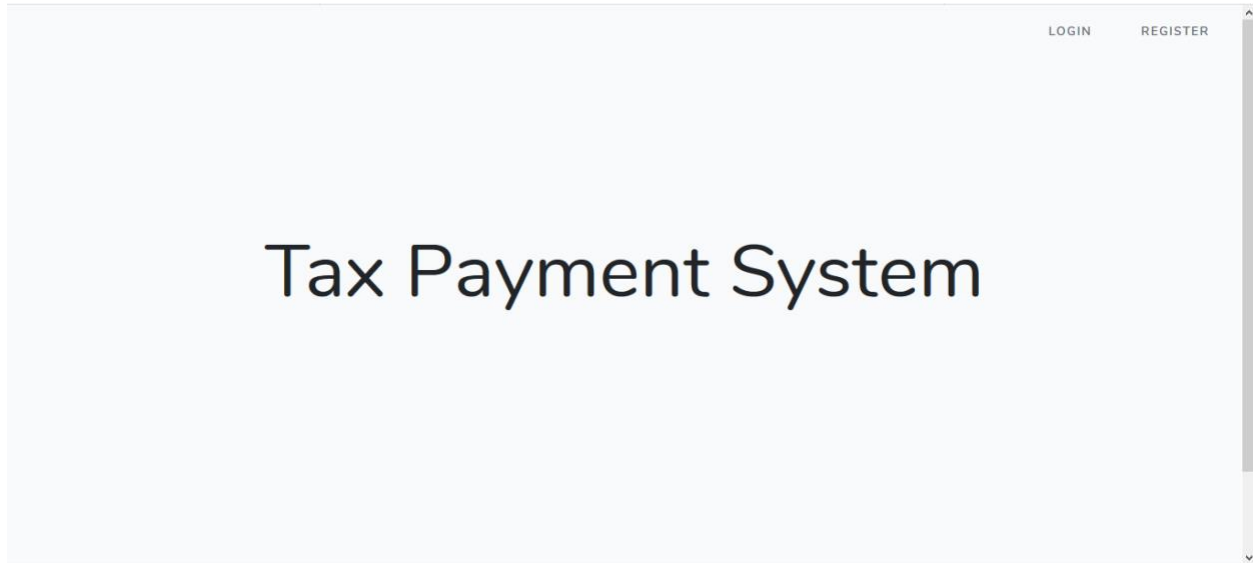

Figure 5.1 Page One

5.2 The User login

The administrator will use their email address and password to log in on this page.

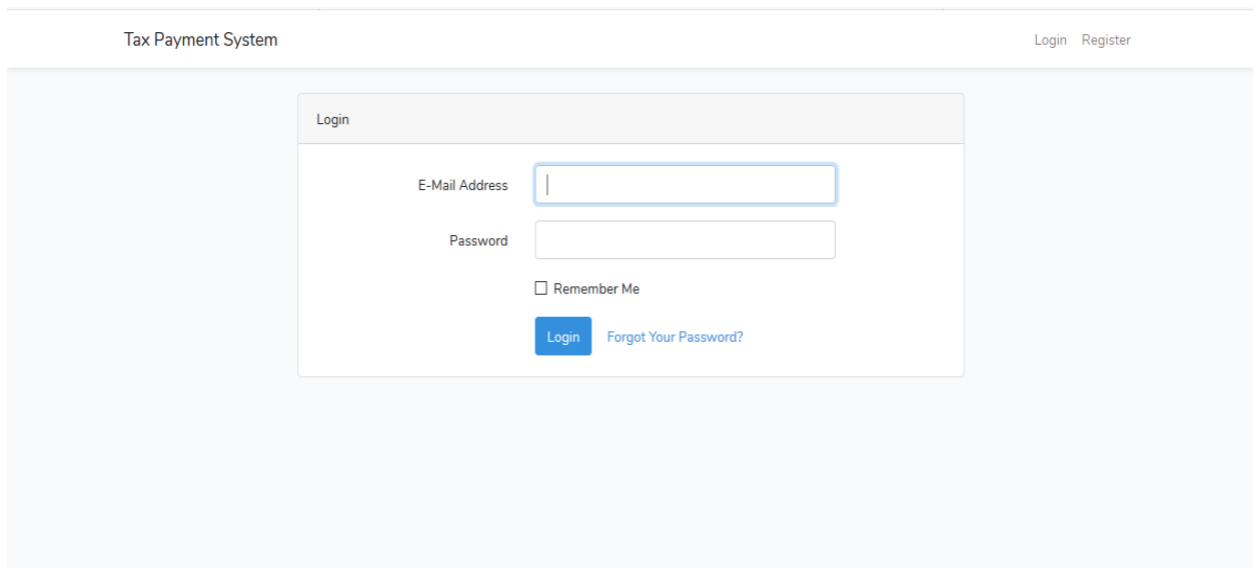

Figure 5.2 USER INTERFACE (User login page)

5.3 The User Dashboard

Users get full access to the data dashboard and menu.

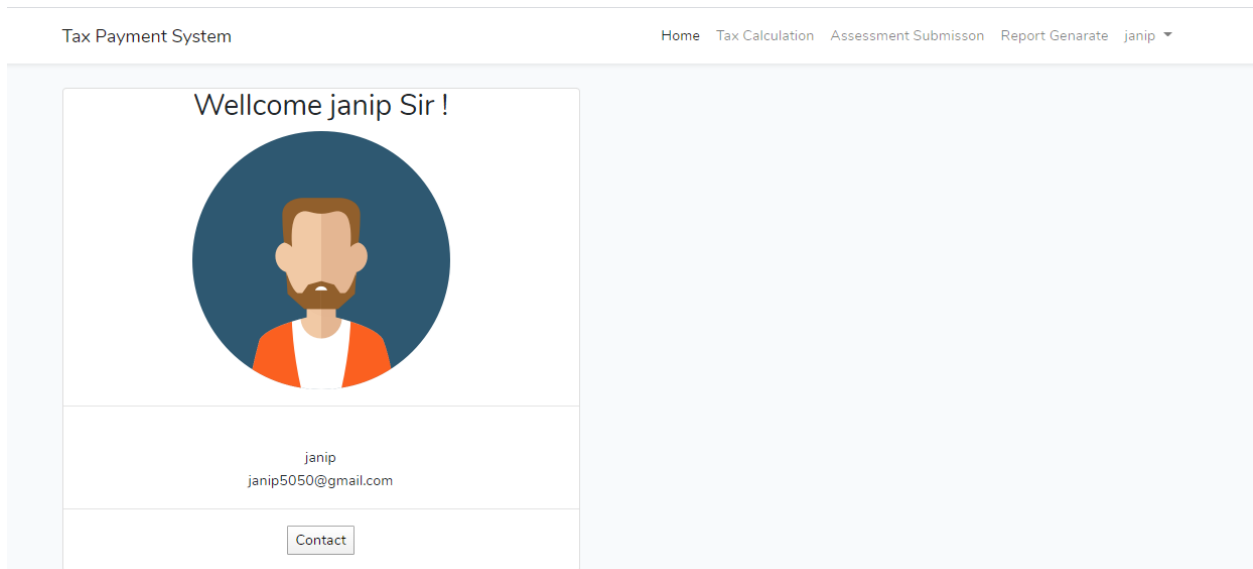

Figure 5.3 USER INTERFACE (User Dashboard)

5.4 Calculating Tax

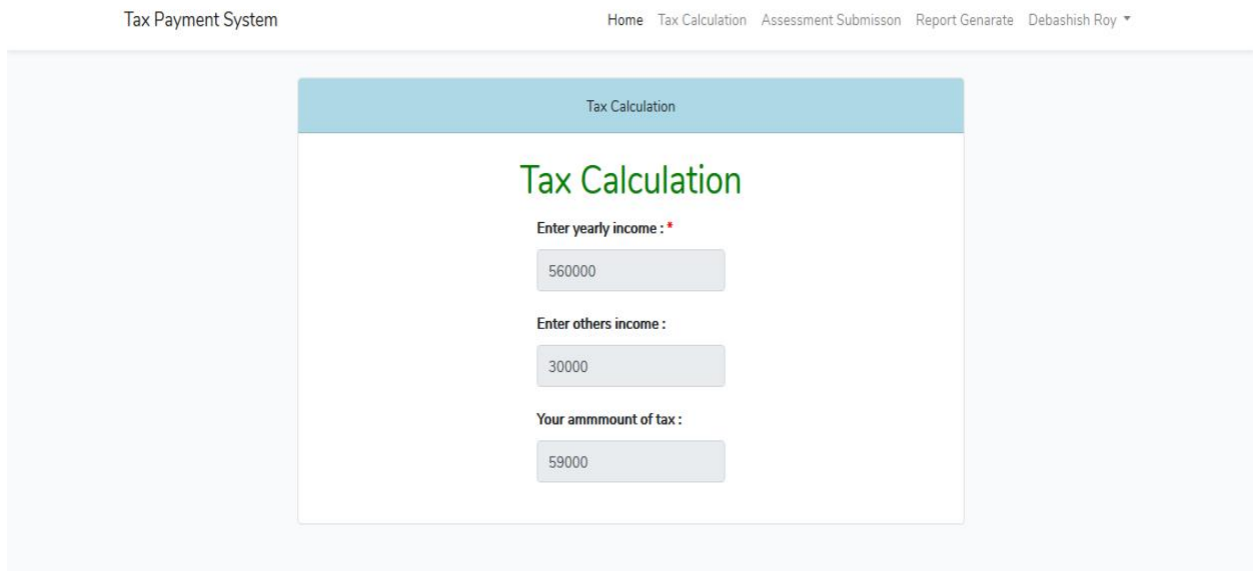

Figure 5.4 USER INTERFACE (Tax Calculation)

5.5 Taxpayable Form

The screenshot shows the 'Assessment Report' page of the Tax Payment System. The page title is 'Assessment Report' and the main heading is 'Income Taxpayment form'. The form contains the following fields:

- Enter Assessment year :** A text input field with a placeholder 'mm / dd / yyyy'.
- Return submitted under section 82BB? (Select one) :** A dropdown menu with 'Select answer' as the selected option.
- Name of Assessee :** A text input field with a placeholder 'Enter your name of Assessee'.
- Gender :** A dropdown menu with 'Select gender' as the selected option.
- Twelve digit PIN :** A text input field with a placeholder 'Enter your Twelve digit PIN'.

Figure 5. USER INTERFACE (TaxPayable Form)

5.6 Assessment report Download

The screenshot shows the 'Assessment Report' page of the Tax Payment System. The page title is 'Assessment Report'. A 'Download File Info' dialog box is open, displaying the following information:

- URL:** http://localhost:8000/Report_generate
- Category:** Documents
- Save As:** Downloads\Documents\document_4.pdf
- Remember this path for "Documents" category
- Description:** Tax Payment System
- Buttons: Download Later, Start Download, Cancel

Below the dialog box, the form contains the following fields:

- Taxes Zone :** A text input field with a placeholder 'Enter your taxes zone'.
- Enter taxes circle :** A text input field with a placeholder 'Enter your money'.

SMTP

Host: smtp.mailtrap.io
 Port: 25 or 465 or 587 or 2525
 Username: a24a4b029fa8b0
 Password: 9a5bc9bea6ad54
 Auth: PLAIN, LOGIN and CRAM-MD5
 TLS: Optional (STARTTLS on all ports)

POP3

Host: pop3.mailtrap.io
 Port: 1100 or 9950
 Username: a24a4b029fa8b0
 Password: 9a5bc9bea6ad54
 Auth: USER/PASS, PLAIN, LOGIN, APOP and CRAM-MD5
 TLS: Optional (STARTTLS on all ports)

Integrations

Ruby on Rails

In config/environments/*.rb specify ActionMailer defaults for your development or staging servers:

```
config.action_mailer.delivery_method = :smtp
```

You are limited to last 50 messages, 1 inbox and 1 user on the free forever plan.

SECTION 6

SUMMARY OF THE PROJECT

6.1 GitHub Link

<https://github.com/allinonesolutionastaxpaymentsystem>

6.2 Restrictions

I had to overcome a lot of challenges along the road. I haven't yet been able to get over these challenges, despite the fact that I'm still studying the required technologies. However, If I have enough time, I am confident I can research challenging subjects and greatly enhance the code.

Version for mobile: The fact that it is a travel-related app makes the user choose to use it on their mobile device. I was unable to make the program mobile-friendly because I was short on time and ignorant about mobile devices.

6.3 Challenges and Successes

I've learned much too much that is helpful to developers since the process began.

I don't even know where to start with designing something; I don't know how to develop algorithms or draw diagrams for projects like database design. I didn't know what an algorithm was before, or how much of one a programmer needed to build a project. The language I chose to create this framework has several essential components that are crucial. I make sure the project USER INTERFACE and database design are finished before beginning the logical section because if they are, running the code will be simple. In conclusion, finishing this program was a significant turning point in my life.

6.4 Future Scope

High-quality software is currently being developed. I'm making every effort to meet the actual requirements for this phase of the process. However, there is still room for development. I've begun the program and am putting a lot of effort into creating a top-notch system.
