Subject : Submission of Internship Report

Dear Sir,

I am here by Submitting my Internship report on “**Effect on Ante Natal Care on Neonatal Health**” At **Ma o Shishu Hospital Mohammadpur Dhaka**. Which is compulsory requirement of the NFE program carriculum. I have got the oportunity to work in Ma o Shishu Hospital in nutritionist department for 60 days, under the supervision of UHM Shahnaz Titthi, Senior nutritionist of Nutrition couseling depatment of MFSTC Hospital.

This intership gave me both academic and practical exosures.First of all I learned about clinical nutritional assessment of ANC,methods,tratment,nutritional guideliness and counseling of ANC.Secondly, the intership gave me the opportunity to improve my theoretical knowledge.I have acquired during the study period.

I am Submitting this report for your kind consideration and also shall be highly obliged if you are kind enough to recive this report and provide your valuable judgement.

Sincerely Yours,

Farhana Ahamed

Department: Nutrition & Food Engineering

Daffodil International University

CERTIFICATE OF APPROVAL

I am pleased to certify that the internship report on Nutritional Knowledge, Guideliness of full trimester of pregnancy and Counseling of ANC and Neonatal health care at MFSTC Hospital conducted by Farhana Ahamed bearing student ID No: 153-34-469 of the department of Nutrition and Food Engineering has been approved for presentation and defense/viva-voice. Under my supervision Ms Shahnaz Farid Titthi worked in MFSTC Hospital as an intern.

I am pleased to hereby certify that the data and finding presented in the report are the authentic work of Farhana Ahamed. I strongly recommended the report presented by Farhana Ahamed for further academic recommendations and defense/viva-voice. Farhana Ahamed bears a strong moral character and a very pleasant personality. It has indeed a great pleasure working with her. I wish her all success in life.

Prof. Dr. Md. Bellal Hossain

Head

Department of Nutrition & Food Engineering

Daffodil International University

ACKNOWLEDGEMENT

Firstly of all my gratitude and thanks to Almighty Allah's, the most Merciful, kind and gracious guidance has made this work successful.

My Deep gratitude and sincere thanks to the honorable Dean, Faculty of Allied Health Science, **Professor Dr. A.I. Mostafa** for this kind cooperation and to accept this Degree.

My deep and sincere give thanks to my academic supervisor **Prof. Dr. Md.**

Bellal Hossain, Head of NFE, DIU for guiding me and for giving me the opportunity to initiate this report. More specifically, I would like to thank him for imparting his time and wisdom.

I am very grateful to my internship supervisor **UHM Shahnaz Farid Titthi**

Nutritionist of MFSTC Hospital for helping me with her valuable suggestions

regarding internship. I am also grateful to **Jannatul Quozer, Counselor** of neonatal and breast feeding department of MFSTC Hospital. It would have been very difficult to prepare this report up to this mark without their guidance.

I would like to express my warmest and Specially thanks to **Ms. Tasmia**

Tasnim, Lecturer for her whole-hearted supervision during my organizational attachment period, **Nasima Akter Sr. Lecturer** and for their countless inspiration and encouragement during my student life in this department.

My gratitude goes to entire NFE department, under Faculty of Allied Health Sciences, Daffodil International University.

Summary

This internship at MFSTC Hospital was well government organized as well as useful experiences. I satisfied and felt that I have learn more knowledge and gained new knowledge, ideas, skills and I achieved several of my learning aim. I got inside works and duties performed by a medical and clinical nutritionist. This internship was also very helpful and good for find out what my goals of my strengths and what is my weakness is, That Opportunity helps me to find what is skills and activities to learn practically and achieved the knowledge I have to gained and improve in myself in the coming time.

Chapter One

1.1 Introduction

About the internship program

Nutrition is the energy source of this obtained from food absorbed or the method of consuming the proper amount of nourishment and energy. As an example of nutrition is the nutrients found in fruits and vegetables and eating a healthy diet of family planing .

Nutrition and pregnancy women need consume nutrition planning. Nutrition of the embryo started at judgment because of , the nutrition of the pregnant mother is monumental from before impregnation (perhaps various months since) as well as totally pregnancy and breast feeding. An ever-rising characterize of research have appear that the nutrition of the mother will have outcome on the child, up to and inclusive the danger for cancer, cardiovascular illness, hypertension, asthma and diabetes, throughout life.

An insufficient or additional rate of few nutrients be able to cause impairment or medical problems in the embryo, and neurological sickness and defects are a danger that is lead by mothers who are malnourished. Calculate the 25% of children's worldwide are born with less than optimal weights at birth due to deficiency of accurate nutrition. Some of the own characteristic such as cost of alcohol or big cash of caffeine can disavowal and irreversible impressed the evolution of the baby, which happens in the early period of pregnancy.

Pregnancy and early childhood are periods of rapid physiological growth and progression. Inadequate nutrition during these trouble growth and improve periods space and children at danger of impaired emotional and cognitive development and adverse health outcomes. As a result, most project and worship teach pregnant and delivery women about the gravity of healthy nutrition and foster them to feed their children and families healthy and nutritious foods.

1.2 Start of the report

Internship program is our final part of our graduations, and our successful occupation. This internship program is very important to learn all of nutritional term of our good health that is why as a student of the department of nutrition food engineering we need to intern duty of hospital which included to the training and important for the idea of planning knowing from legal education. This is a practically learning issue for me. Internship program is can complete some lack of us, as it get advantage for a student to cover the principal fact of the health operation.

The report is produced by the curriculum necessity of B.SC in The Nutrition food engineering program The theme of my internship report is a counseling of

“ Nutritional fact of pregnancy women and children’s and the “Effect on ANC (ante natal care) of neonatal health” internship complete of MA o SHISHU HOSPITAL, MOHAMMADPUR, DHAKA BANGLADESH. Because of this goal, I have performed their guidelines counseling process and capable performance nearly. i make up my Internship program as a regular student and as per advice with my university SUPERVISOR AND DEPATMENTAL HEAD “Prof. Dr. Md. Bellal Hossain. I Have chosen the main theme is **“EFFECT ON ANC OF NEONATAL HEALTH”**

1.3 Objective of the program

The principle purpose of made this Report to complete the Necessity of B.SC in Nutrition and Food Engineering program. It is carry on three credits for this internship program and find to the affinity between relating to truth and useful ideal for knowledge and experience. A short lesson of the knowledge to the instant health walk can only be acquired by the practical actualization of planned thought, which we study and erudite from our academic performances.

About this goal, of the internship program..The goal of development pregnant mothers and children’s health. Some people have no idea for this term of three trimesters of pregnancy, some

lack of nutritional food, they don't know about some methods, breast feeding, delivery method and lifestyle, etc so this the governmental organization and family planning hospital which are included to 100 bedded mother and children hospital of Fertility service and training center.

Chapter Two

2.1 Review of MFSTC (MA o SHISHU HOSPITAL)

This is the Governmental organization of Bangladesh is it a fertility training service center is located at Mohammadpur Dhaka-1207. This was developed as a very special project for poor people in 1974 with established facilitation from the “Pathfinder fund” for the goal of family planning services. it was the first nature center of Bangladesh. This center first introduce the MR service, habitat and performed its maturity .

Nowadays MR is very essential to countenance women services confirm their success of their claim on their generative health. This MR also give and provide identify service to concept failure and for some complications. At the time conformity with the government policy this service

complete 5000 MR yearly and follow up of 4000 patient per year. It has started giving to post abortion care (PAC) clinical service. Which focus on the main reason for the complications of MR and abortion fact. Each year visited all out of 80% client in this center from the middle and lower earnings cycle which intimation of this vagueness and its good representation and good performance, good quality counseling, keeping all record ,data of patient information, and provide the all of follow-up services for the patient and all clients.

The major thing of this hospital started to provide most of the normal delivery services covered to CS (caesarean sections) towards to the subsist, services. They are also provided nutritional advice for mothers and newborn baby's.

2.2 Mission

Nutrition and family planning service for all client and all patients need to good behavior good quality to given

1. Provide the best treatment of mother care
2. The response with view of fulfilling health of counseling
3. Provide all health advice of pregnancy
4. Give 10-15 years children health advice
5. Overall their mission mothers and children's care.

2.3 Vision

To be notable the organization at the prominent to mother health care of pregnancy, try to normal delivery and providing all medicine what need for mother and children, their vision is to given good quality, health care and productivity to all clients.

2.4 Overview of MFSTC Hospital

This service center of the MFSTC hospital was established with their vision to grow intelligent in the field of mother and children health care and family planning project. A very good charming helpful kindness behavior of all doctors with client

Their passion to provide best service to all clients fulfill their needs demand and all desirable thing. To higher quality of outcome of pregnancy, newborn baby's treatment , nutritional counseling ,breast feeding and neonatal care.

2.5 Department & service of MFSTC hospital

A. Family planning service

1. **Birth control Injection:** The birth control injections means hormonal injection that restrains unplanned pregnancy and for three months at a time. This hormone is a shot is progestin, which means birth control shot works similarly to the birth control pill. It is a limit method of control pregnancy.
2. **Post partum family planning:** it is a system of packaging information of advising and counseling service of the address of unique contraceptive needs of women within first year after childbirth and the post-partum family planning prevent to the limit of pregnancy if they desire to do it.
3. **Oral pill distribution:** it's called fertilization which works by stopping sperm from joining with the ovum. Control the sending hormones for the pill is works to destroy the starting step of a pregnancy and stop ovulation. The ovulation means there is no ovum hanging around for sperm to fertilize and for this process pregnancy cannot happen. Oral pill hormones also thicken the mucus on the cervix. That is why they provide this pill to the client.

4. **Implant insertion service:** The implant service continue using this method is birth control planning methods. It can be used for 3 years and after 3 years the hormone supply and running out of this process are break down then the implant are working. It is a long limit method of controlling pregnancy.

5. **Male and female sterilization:** The sterilization means remover some part of sexual things. Male sterilization called “vasectomy” which process of works by stopping sperm and getting into a men’s semen and the fluid that he ejaculates. It works by the tubes which carry sperm from men’s testicles to the penis are cut and blocked with heat. The female sterilization called “getting your tube tied” or “tubal ligation” which works done by cutting, blocking and sealing to the fallopian tubes which carry the ovum (egg) to the uterus (womb)

6. **(ECP) emergency contraceptive pill service:** the emergency use of pills works mainly by destroying the release off the womb egg and ovulation most use the same hormones that are in regular birth control method. Once implantation has created to the emergency contraception and it is no longer effective. It is a simple and easy method to provide emergency service of contraceptive pill.

7. **Condom distribution for male:** it is also a birth control method. Is the condom distribution programs are a type of structural intervention that involve to the distribution of condoms as a mechanism to prevent the HIV transmission. And protect to the HIV prevention strategy according to the centers for disease control and prevention CDC. For male this is very important to protect the influence of birth control.

8. **(USG) guided removal of missing implant service:** this service guided removal of soft hands using Sonography. The ultra sound guidance may improve the success rate of IUS removal without the need for more invasive procedures such as hysteroscopy to removal system and removal soft tissue in the hands using this process of implant.

9. **(IUD) intra uterine device service:** the intra uterine device service are divided into two types of “copper IUD device and Hormonal IUD device” which are included to a tiny bit f copper and protect from pregnancy for up to 12 years. If they want to do it then provide them is this service.

- 10. (IUCD) hysteroscopy guided removal of missing service:** it is a contraceptive service which included to the coil, is a small, often T-shaped birth control device. Which are added to the women's uterus to prevent to the pregnancy. This is one form of long-acting reversible birth control method.

B. MCH service

1. **(ANC) ante natal care service:** it means regular check-up to follow full trimester of pregnancy it is a type of preventive healthcare. Ante natal care service which prevent potential health problems and promote healthy lifestyles that benefit both mother and child.
2. **Caesarean section (CS) delivery service including:** caesarean section also known as C-section. It is a delivery for mother and baby and health professionals and health care service. In this hospital they try to normal delivery but some danger mother of underweight women, some complication women they advice this section.
3. **(PNC) post natal care service:** given immediately care for birth (After) first six weeks of life of mother for her newborn baby. Care including to the hormone level and uterus size, to returns the non-pregnant state. Postnatal care includes also systematic examination of mother and baby care.
4. **Service of Distribution of vitamin A capsule:** Vitamin-A capsule distribution to control of Vitamin A deficiency. Survive value of this service are preventive to the immunizations. For child health is provide to the 4 to 6 months is vital for good infant and child health and provide some vitamin-A capsule or tablet for mother health care of sequence provided to ensure health service standardization.

5. **Sick children under 5 years:** if the child is age of 2-5 months and 5 years to the clinic for a particular problems or symptoms of pneumonia, diarrhea, malaria, malnutrition etc. when a main symptoms is present ask additional questions to help and provide treatment to the illness. For malnutrition check the child and anemia. Assess other problems the mother has mentioned and also check the child's immunization status.

6. **Adolescent reproductive health care:** is state of whole physical, mental and social well being program. Provide nutritional advice and this service for 10-15 years children health. The adolescent sexual and generative health need some support and mental care and save lives of children's and assure they grow-up healthy.

7. **Indoor service of paediatrics care:** this paediatrics care of child health care extensive source to provide all child health care specialists and paediatricians with up-to date investigate on all aspects of hospital and neonatal care.

8. **MR & post abortion:** Menstrual regulation (MR) is done in case of cessation of menstruation due to any reason of infections and sepsis problem. MR service are typically provide through the management and general family planning advice.

9. **Immunization including hepatitis-B vaccine:** the hepatitis-B vaccine is recommended for adults, women and children living with diabetics and those at high risk of infection due to, lifestyle and living country of birth.

10. **Nutrition advice service of pregnant mother & malnourished children:** most of poor people having some lack of food and nutrition. They have some lack of food for their low income of economical problem that is why they suffer malnutritional problem that Is why they provide some food advice and their children give some nutritional food plate and card.

11. **Breast cancer screening:** breast cancer screening means checking women's breasts for knowing cancer before there are signs of some symptoms of the disease of breast.

12. **(VIA) visual inspection of cervix with acetic acid:** via test is important for all women. That test positive for precancerous lesions. Which is percent of cervical cancer using visual inspections with acetic acid
13. **Management treatment of referral cases:** the management of referral cases are process in a health worker at a one level of health system and having influence of drugs, equipments skills etc)
14. **STI & RTI service:** it is a very important strategy to prevent HIV transmission and develop to promote sexual and reproductive health.

C. Health education & counseling service

- **Nutrition counseling:** provide nutritional advice of food and gives mother and children food value of pregnancy and children health.
- **Breast feeding counseling:** breast feeding service are very important service for the mother and newborn baby's they counseling to ask their problem of breast, check-up the breast feed problems, teach them how to feed breast for children.
- **Antenatal and postnatal counseling :** they give advice to all the pregnant women after and before birth newborn baby. And follow-up regularly and monthly.
- **Client counseling:** they want to know client problems of pregnancy any complications, infections, infertility problem they suffer and men female sexual problem solve.

- **Adolescent health counseling :** the adolescent health counseling program are given to the children and women for their health issue.

D. infertility services

- **To give assurance to the long term contraceptive users:** the long term contraceptive users to give assurance their needs, problems and they provide their methods to birth control of pregnancy. If they want to do it.
- **Couples are counseled about infertility:** the infertility program are given to their birth control service and remove inflectional problem of tube connect methods of infertility.
- **To identify the common causes of infertility in both male and female and provide basic management and treatment:** important to known that they have special care and treatment for this infertility program. Given some tablet of pain and bed rest.

5. **Social welfare department:** is that system is that aims to provide quality care to society participants to the client. To provide some supplemental nutrition assistance program, breast feeding program, family planning program etc.
6. **Pathology – general pathology and special lab for infertility service:** for test hormonal fact, fertility effects, cellular injury, inflammation etc
7. **Imaging – Ultrasonography (upper and lower TVC) :** this find out to the patient who has a blood clot in their legs or arms it ultrasound works both side of the area of concern.

G. Training service and department

1. **Field training of students from welfare department under and national university and different medical college hospital:** they give to the opportunity for the students for training courses.

2. **Training on counseling of field worker of health & family planning:** to the field work and family planning section works for all clients and indoor outdoor patients.

3. **Training on hysteroscopy operation:** the benign gynaecological surgery of hysteroscopy course with practical training in most relevant hysteroscopy procedure and a new technology.

4. **Six months midwifery:** they organized the midwifery program for nursing curriculum. six months midwifery program registered to admit the training center and they give certificate.

5. **Six months of EOC:** the environment of care are safety directed to every six months in all patient care place of areas it is a health care service for all well-being in socialism program.

6. **Six months of CSBA:** this is a center for strategic and budgetary assessments. More than half million women are die for pregnancy related cases it is a moral majority which occurs in all the Developing countries and preventable thing. It is a health service of the present of the skills provide to during pregnancy and birth of newborn baby. Which included to the main strategy for better health outcome of midwifery six months program, this goal is increase the health skills and improve their baby and mother health issues.

7. **Training in MR, PAC , IUD, NSV, Tubectomy , implant, counseling , and infection prevention:** This Menstrual Regulation and post abortion care, post acute care, intrauterine contraceptive device, No-Scalpel vasectomy for male sterilization and tubectomy of female sterilization, implant service program to give short time, regular, long-time methods. And this all process are give them to use this any methods for their problem solving. They train this all thing by projector and practically they give teach them how it uses and works for men and women's health fare.

8. **Training of doctors and paramedics on clinical contraception,(RTI), (HIV-AIDS) case management and reproductive health, (MCH) health and nutrition:** the HIV and RTI means Respiratory tract infections and maternal and child health service to give their well health advice, care of treatment all of maternal problems solving to

regular follow-up. Counseling the all client of problem solving and some cases of infections they provide to teach them how they live safely and how they stop their pregnancy and birth control skills, how they use some protection to avoid the HIV disease, how they prevent their own habit of sexual addiction, how they take some methods of controlling birth issue, newborn baby livinghood , maternity mothers safety and lifestyle, nutritional assessment, advice all these things they provide to teach them.

H. Training unit

1. **Modern conference room with highest facilities of (75 seats) capacity :** this Mother and child of the fertility center have some unique system to meet all the doctors, nutritionist, nurses for meeting all the new issue and collaborate thing.
2. **One cafeteria (Accommodation 60) :** they have one cafeteria which give healthy food with reasonable price.
3. **Six training rooms with digital and modern facilities (Multimedia, Air conditioner, sound system) :** they have six rooms for training class with digital projector monitoring and sound system where 60 persons can stay.

I. Research department

1. **On different aspects reproductive health, maternal & child health, nutritional status, and contraceptive use:** to their destiny for improve their health mission for mother and children. They use some drama in their projection for knowing mothers condition of pregnancy, they use some nutritional plate, card, wall-paper to teach children.
2. **Operational research and Survey :** this is analytical methods of problem solving and making decision to useful management. They research some complications problem, mother and child problem and infertility issue.

3. **Clinical trial on different contraceptives before being introduced in family planning program:** before being introduced the family planning program they trial some different contraceptives of health care.

j. Trainee's hostel and meeting facilities

1. **Hostel for 6months trainees (CSBA, Midwifery, EOC):** they give some facilities to stay students of training courses.
2. **A well decorated conference room with a seating arrangement of 65 person :** for collaborate and discussion matter deserve some space of solidarity that is why need a well decorated conference room for meeting.
3. **Fully finished 37 rooms are available including 8 VIP cabins with all modern things :** for some visited person have 8 VIP cabins for stay and for rest.

Objective of the department

1. Increase contraceptive prevalence rate (CRP) by providing and promoting family planning services.
2. To reduce the population rate and growth.

3. Formation of planned of families.
4. Reduce maternal and infant mortality rate through client motivation.
5. Provide advice and counseling, treatment, assistance and follow-up regularly.

Chapter 03

3.1 The effect on Ante natal care of neonatal health

The antenatal care department is important to all the pregnant women. The department plan to provide all of the preparation of full trimester of pregnancy. This is a women health care service of maternity term. Is order to the diagnosis disease and injured of complicating obstetric conditions without any symptoms and give information about their lifestyle, pregnancy and delivery, personal issue, their needs and what they want, their problems of pregnancy of wanted or unwanted steps, and why etc are counseling and provide them some skills of some methods if they want. Some women feel shy that is why they ask to know about it and give some knowledge. They provide full check-up and regular follow-up service to know their health conditions of pregnancy. Ante natal care is a beneficial influence of intrauterine growth and gestational duration of pregnancy. Either by diagnosis and regular treatment of pregnancy complications as like

- Toxaemia
- Anemia
- Gestational diabetes
- Gestational hypertension
- Maternal infection or sepsis
- Antepartum hemorrhage (bleeding in the genital track from 24 weeks of pregnancy)
- Intrauterine growth retardation
- Delivery complications
- Post partum hemorrhage
- Gestational weight gain

This all risk factor are modifiable to reducing these problems and promote healthy lifestyles that benefit both mother and child.

3.2 Aim and objective of ANC

1. To study the effect of antenatal care of pregnancy outcome.

2. To find out weight and height
3. Find out to the prevalence of low birth weight
4. Provide mental and physical support
5. To give them advice to eating healthy food.

3.3 Materials and methods

The materials and methods to provide health care service. The department is based on the mother and child care service which included for resident and urban health training center and family planning. During pregnancy of all trimester whose expected full one year considered for study of pregnancy. Some pregnancy is dangerous for underweight and malnourished women. Some critical situation occur for delivery time and some resulting delivery are miscarriage, abortion, still birth, twin deliveries were excluded from analysis to help their first term of pregnancy and advice them.

- At first they visit ANC for taken their new history with all the data of patient treatment and check their all information.
- Measure the height and weight for checking their body weight of BMI conditions.
- Counseling their all problems (ask personal problem for knowing situation of birth planning)
- Provide to take some methods if they want.
- Weight of the baby recorded data analyzed
- Visit almost between 32-42 weeks of pregnancy women.

Mostly the 60% rural area patients come to visit in their department. And 40% urban area peoples are come to visit.

Neonatal health care

The neonatal health care of 28 days of age during first 28 days of baby suffer highest risk of dying it is thus crucial the feeding care of baby to provide during this period. Some of maternal problem some baby suffer illness. The neonatal is important to the premature and sick babies treatment of the sensitive problem to the sensitive environment which around them. They provide Neonatal Intensive Care Unit secure, incubators of stabilized in the room that rooms are designed to remove and decrease to the noise and light levels.

Until the birth from age of three months, the baby can be called a newborn baby. It is depended on the problems and illness of gestation at birth in weeks. They provide to the different level of the neonatal health care.

3.4 The levels of care

1. **Low dependency care:** this section for stable and growing babies, they provide careful treatment in the observation for babies who do not need to stay continuous in this section.
2. **Transitional care:** this transitional care is situated within the maternity of MFSTC Hospital. They give for babies who need to medical treatment and who are fine enough to be basic cared for their mother bedside.
3. **Intensive care:** This intensive care for serious problems of serious illness babies., those born more than 3 months, low birth weight-less than 1500 grams, genetic illness, who can be called a premature baby.
4. **High dependency care:** the high dependency care are important for less serious illness babies but some baby need a special and great deal of observation and support for whose baby are complete to recovering from dangerous and critical illness in the neonatal unit.
5. **Kangaroo mother care:** the kangaroo mother care means skin-to-skin contact care of babies. It is for low birth weight babies treatment and care. Whither baby kept in skin to skin and chest to chest care with their parents, specially with their mothers. This kangaroo mother care improves parental confidence and promote attention of bonding and increase milk production. They give this care at least one hour each time, as long as possible they give this 1 to 2 hour time for stay their mother chest.
6. **Breast feeding care :** this is very important step of newborn baby. Some women have breast problem for crack nipples and start bleeding and some problems babies cannot eat their milk. And this is a very important and essential food for baby. That is why they take extra care and teach mothers how to eat and latching on correctly.

Chapter four

4.1 Conclusion:

This internship prolong my theoretical knowledge when I saw to the practices continuity of Ante natal care service and effect on mother in ANC on neonatal health care treatment of guidelines ,and the effect on Ante natal care on neonatal health counselor work at MFSTC hospital, I learn lots of unknown thing of this hospital. This internship given me new acuteness and inspire to explore the career in Maternity care of pregnancy and neonatal health counselor of baby care and treatment. Into professional works of practices and extra activities of all sections.
