DECEMBER 2020

APPROVAL

This Project titled **Development of Web-based Medical Information Provider**, submitted by **Md. Shawn Shikder Sonet, Shimul Chandra Gharami** and **Md. Abdul Halim** to the Department of Computer Science and Engineering, Daffodil International University, has been accepted as satisfactory for the partial fulfillment of the requirements for the degree of B.Sc. in Computer Science and Engineering and approved as to its style and contents. The presentation has been held on **5th December, 2020**

BOARD OF EXAMINERS

DECLARATION

We hereby declare that, this project has been done by us under the supervision of **S.M. Aminul Haque, Associate professor, Department of CSE** Daffodil International University. We also declare that neither this project nor any part of this project has been submitted elsewhere for award of any degree or diploma.

ACKNOWLEDGEMENT

First we express our heartiest thanks and gratefulness to almighty God for His divine blessing makes us possible to complete the final year project/internship successfully.

We really grateful and wish our profound our indebtedness to **S.M. Aminul Haque Associate professor**, Department of CSE Daffodil International University, Dhaka. Deep Knowledge & keen interest of our supervisor in the field of **Web Development** to carry out this project. His endless patience ,scholarly guidance ,continual encouragement , constant and energetic supervision, constructive criticism , valuable advice ,reading many inferior draft and correcting them at all stage have made it possible to complete this project.

We would like to express our heartiest gratitude to -----, -----, and Head, Department of CSE, for his kind help to finish our project and also to other faculty member and the staff of CSE department of Daffodil International University.

We would like to thank our entire course mate in Daffodil International University, who took part in this discuss while completing the course work.

Finally, we must acknowledge with due respect the constant support and patients of our parents.

ABSTRACT

Nowadays hospitals and Clinics are opening up day by day. But we all are not aware of their quality. Most of the time we don't know about their locations, their consultants, nurses and sits availability. We don't know which clinic or hospital is specialized for which treatment and services. For getting any information of any health service providing hospital or clinics we have to go their specific website to get the best suitable hospital for us to get the better services it is not an easy process. If we get a good number of hospitals or clinics information in a same website with reviews and recommendation it is easier to take the decision for choosing the appropriate hospital or clinics in short time.

At a time we are not concern about our emergency ambulance services and health support. Most of us we don't have any contact number of nearer Ambulance service provider. For this we have to suffer a lot without getting ambulance service, sometimes it may cause for one's death also. It is also difficult to find out the pharmacies in unknown places. It is offering a great opportunity to be connected with vast number of clients through online.

Our project motive is to combine the solutions of these major problem in a single website named as **MedstepBd**.

CHAPTER 1

INTRODUCTION

1.1 Introduction

As a nation we are not aware and concern enough about our health. We don't take regular checkup and treatment. So we have to lose a lot of lives every year only for lack of proper treatment.

If we go for buy a new smartphone or television at first we check out review the quality and service of that device through online video or blog such as YouTube or googling but when we go for any major treatment which can drive oneself to a better life or death then we don't feel to check the service or quality from where we are going to take treatment. That is not unusual that, every year a large amount of people getting harassment and getting worse effect for their health causing wrong treatment.

A table of case filed on number of death cases for wrong treatment is given below.

Table 1.1: Case filed about wrong treatment in Bangladesh:

Year	Number of Death
2017	69
2016	65
2015	104
2014	122
2013	53

Our website is providing the location of the clinic and hospital. It is helping to identify the location and direction by map support. There is option to drop review of their service and getting the idea to choose for getting service from the hospital and clinic by checking out their service rating and recommendation.

Most of us we don't have any contact number or way to hire ambulance services in emergency time. This problem is more acute for outside of Dhaka city. Various reason is behind of it:

1. We don't feel to save ambulances contact number, because we don't need them always though in emergency time there is no doubt how necessary it is.
2. If we collect contact number of the ambulances there is no surety about their availability in exact time when we need the service.
3. Since there is a few numbers of online ambulance service provider website but they are fully under a company or organization. That's why they have only few ambulance and can't cover the whole city because these are not enough.

Our website is offering all ambulance service provider to be connected with vast number of clients through online by our website which is a great opportunity to them and at the same time our website users are getting the facility to having contact facility with most number of ambulance service providers fully free which ensuring the most reliable and 24 hours ambulance service at any time and any emergency situation.

1.2 Motivation

We were motivated to fulfill this project to solve several problems below:

- Difficulties to find out hospital in unknown places.
- Unavailability of emergency ambulance services.
- No reliable evaluation and review system of health care centers services.
- Hospital and Clinic choosing problem for appropriate treatment.
- No platform for the ambulance service provider to be connected independently with mass people through online

1.3 Objectives

Our project was implemented for completing the following objectives and goals:

- To help for hiring emergency ambulance service through online in required area choosing from nearest available ambulances.
- To provide the facility to the ambulance service provider to be connected with mass people.
- To provide the available ambulance service provider information.
- To get recommendation for choosing clinics and doctors in your area.
- To checking the location and tracking direction to find out required hospital.

- To give the facility to Compare the hospitals and clinics by their star ratings and user review.
- To provide the facility to get information and booking appointments through embedded hospitals website link.

1.4 Expected Outcomes

We have determined to create a website which will provide three Solution in one website.

- It will help to find out the hospitals by providing Information and recommend the best by review system.
- It will provide the numerous contact information of nearer available Ambulance Services.
- It will help the ambulance service provider to be connected with mass people.

1.5 Report Layout

In the First Chapter of this report we have discussed about the preliminary Introduction, main objectives, goals and expected outcome. In the second chapter we have discussed about the Background for implementing this project, We have discussed about Comparative works which has been done before, we have discussed about their limitations and which we have meet by this project. We have also show the comparative analysis in tabular format. At chapter 3 we have mainly discuss about which tools and software we have used to implementing this project. In chapter 4 we have describe about the design of our website including both Frontend and Backend. In chapter 5 we have focused on the testing result of various features and options of our project. How it impact on our society and daily life have been mentioned in chapter 6. At the last chapter of this report has been discussed about the conclusions and the scopes in future.

CHAPTER 2

BACKGROUND

2.1 Preliminaries/Terminologies

In this modern age we Internet has become more essential part of our day to day life. It has become more available day by day and providing a great impact in every aspects of life. We tried to find out our facing problems and difficulties solution through internet. Nowadays taking any decision we check it online. For example if we want to buy a new smart phone, television, cars, bike or any types of gadget we check out its review and ratings to buy it. But at the time of taking health service we don't feel to check the review or recommendation. Therefore every day a lot of hospitals and clinics are opening up but they are not aware to improve and maintain their quality of services. For this reason we have to face many difficulties to have treatment services such as:

- Lack of cleanliness,
- Poor maintaining system,
- Wrong treatment.
- Wrong distribution of appointment serial.
- Wrong report delivery.
- Unexpected delay of report delivery.

On the other hand our ambulance facility is not enough for general public demand. Though handful organization is working for providing ambulance service with their limited ambulance and drivers witch is not reliable and failure to fulfil the public demand in emergency time.

At the same time our large part of our ambulance service provider are not getting clients for the lack of proper communication platform. So, we tried to bring up a solution to face those problems.

2.2 Related Works

There are some ambulance service provider web platform is providing under a specific organizations with limited Ambulances and drivers. They are being mentioned below:

- Ambulanceall.com
- Lamyea Ambulance service
- Munshi ambulance service in Dhaka

2.3 Comparative Analysis

As there is some website which are providing hospital information and some are offering ambulance service, but they are performing with individual different website. Google is providing rating option, but that is not so reliable and compact.

Which has comparatively proved tis website as unique:

- Hospital and Ambulance Information in same website.
- Only one website which offering to review and rating option all over the country.
- Ambulance service provider are able to create account independently to be connected with public users.

2.4 Scope of the Problem

We have not good options for choosing the appropriate health care center by providing the review and correct information. The number of our ambulances are not satisfying our public demand. If we can add them to our website and connect with general people through online, our ambulance service will more available, secure and cheaper. It can bring a revolutionary change to online ambulance booking system.

2.5 Challenges

- Till now our whole country is not in networking coverage area.

- To use our application user should have smart phone or networking device which enable to browse websites.
- Third challenge is to prevent the wrong information and fraud review.

CHAPTER 3

REQUIREMENT SPECIFICATION

In this chapter we shall discussed about the requirements and necessities to implement and running our project

3.1 Business Process Modeling

Business Process Modeling helps to understand the interaction with the user and provider graphically to easily understand the whole system.

The model of our project is given below.

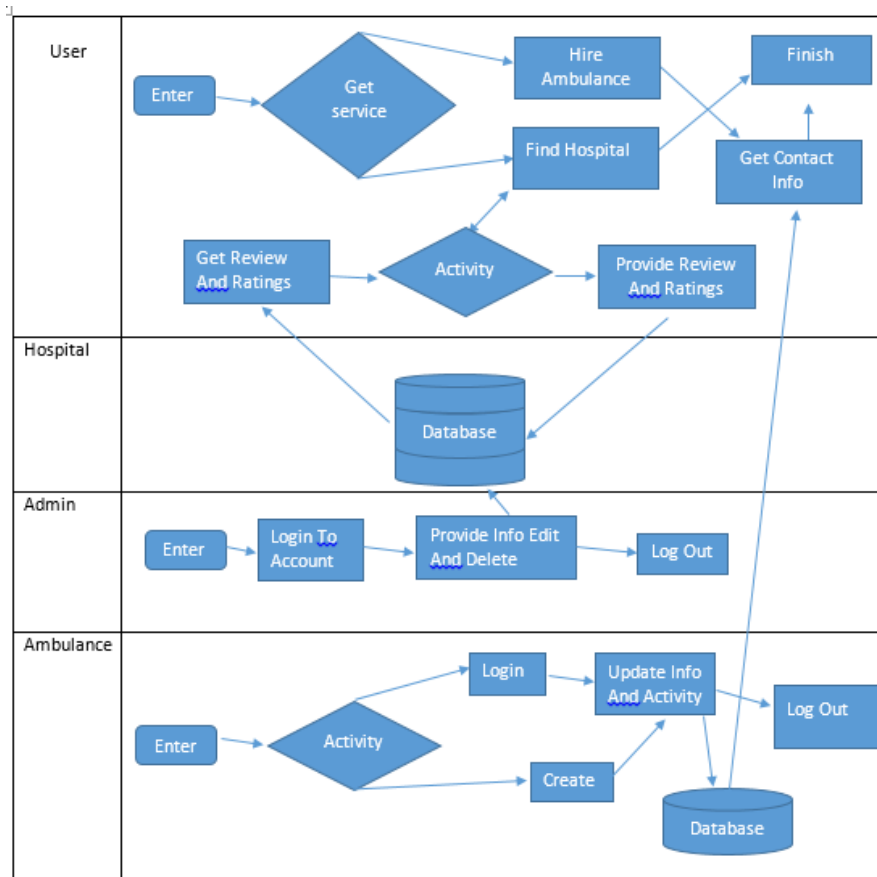

Figure 3.1: Business process model representation.

3.2 Requirement Collection and Analysis

For implementing our website we had to collect some requirements. We can categorize our all requirements into software section and hardware sections.

3.2.1 Software

To make more user friendly website and available to end users we have used latest programming and hypertext languages. We have used the framework which also developed by popular languages. We focused on minimizing the run time executions and lessen the bugs and errors.

For building up the website, we need the accompanying Software Requirements:

- Operating System: Windows 10
- Development Tool: Visual Studio IDE/ Code Editor, Pixie Color Picker, XAMPP
Local server
- Language: HTML5, CSS3, JavaScript, PHP, JavaScript library – jQuery
- Database: MySQL
- Framework: Bootstrap (for Front End), Laravel(for both Frontend and Backend).
- Browser: Google Chrome, Mozilla Firefox.

3.2.2 Hardware

For building up the application, we had to use an internet connected Computer accompanying following Hardware Specifications:

- Processor: Core i5
- RAM: 4 GB

- Space on plate(disk): least 512MB

3.3 Use Case Modeling and Description

Use case model describes the interaction among the actors of any system. It helps to understand the system easily by a graphical representation.

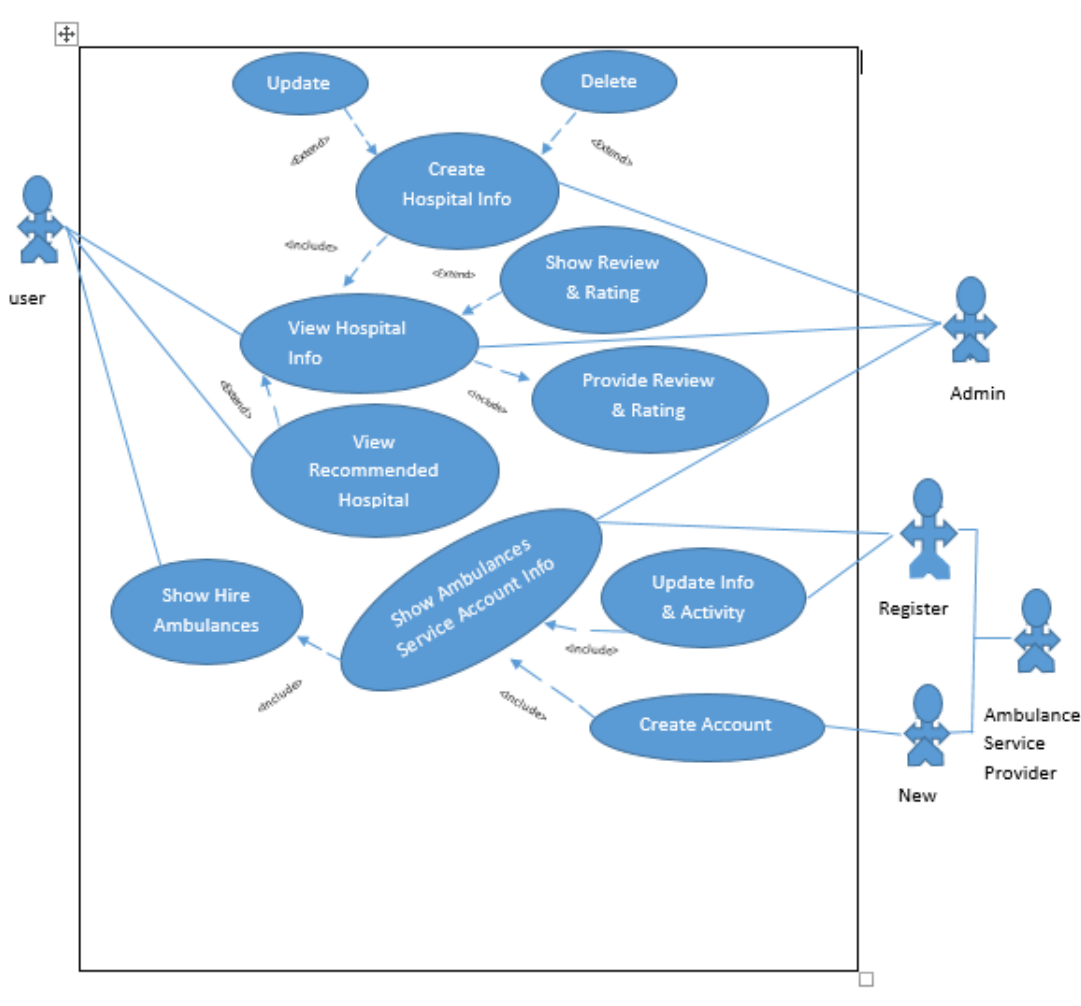

Fig 3.3: Use Case Diagram.

We can see that, there are three actors are include in our project's use case diagram. The main actor of this project are User and Ambulance Service Provider who is enable to grab the information provided by another two actors Admin and Ambulance Service Provider. Admin is the main controller of total information Database and another actor's activity. Ambulance Service provider can create and maintain his account to provide and update his/her information and activity.

Actors:

- User
- Admin
- Ambulance Service Provider

3.4 Logical Data Model

In our project we used MySQL to store and call back the data into database. We had to store the following Data and Information to our database:

- For Admin:** Email and Password
- For Ambulance Service Provider:** Email and Password, Account Information, Track availability and Action information.
- For Hospital:** Hospital Information, Review and Ratings, Images.
- Others:** Some data and information to execute the websites in frontend decoration and Backend options.

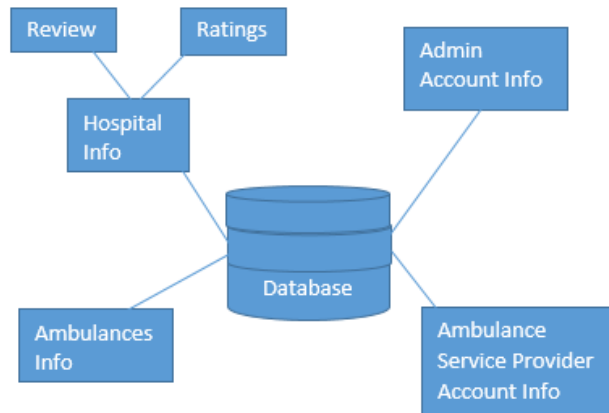

Fig 3.4: Database Model

3.5 Design Requirement

Our website is dedicated for all end users. So it is very important to be easier and user friendly to both expert and inexperienced users. It should ensure that every user needs to use it without any difficulties and complexity. Every developer tries to present his project to his/her user so that it can be easily accepted and it basically depends a lot on its look. So we tried to use a simple and easy user interface for our **MedstepBd** Website.

CHAPTER 4

DESIGN SPECIFICATION

Design and looks of our website will be describes in this chapter

4.1 Front-end Design

A Websites usability depends on the Frontend design of a website. SO we tried to make the Frontend Design of the website to be simple and straight forward.

Homepage:

It is the Homepage view of our website which showing the Logo, Navigation Bar, Contact information. It is also showing a button to Take Your Service option. It has been added in front of the webpage so that user can easily find out the service option and get one's required service as soon as possible.

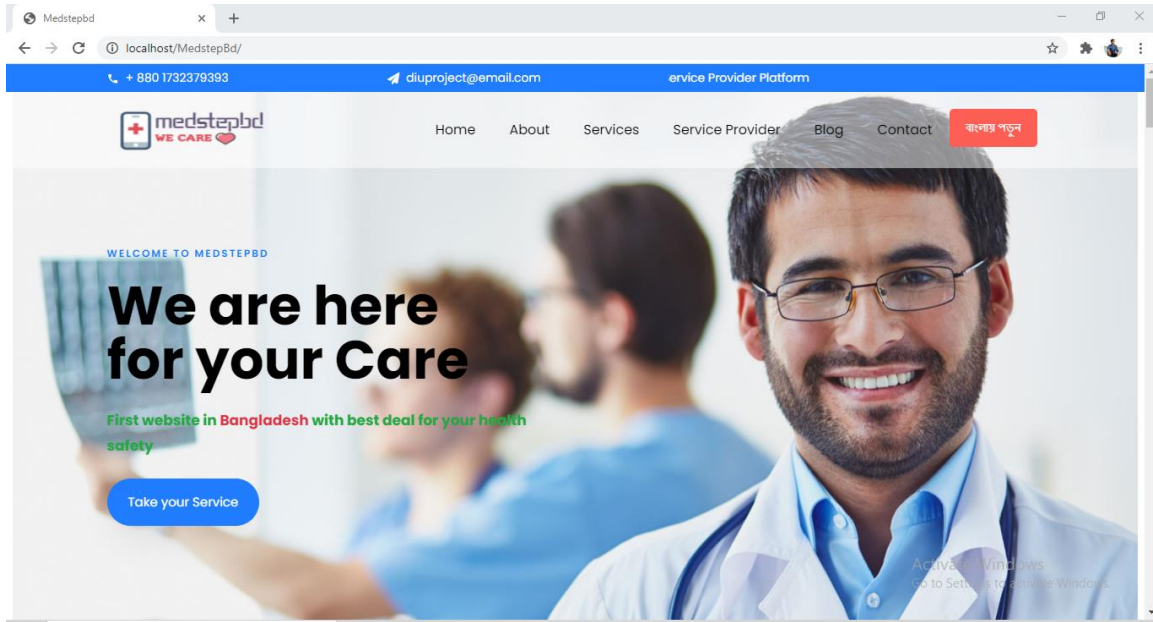

Fig 4.1.1: Homepage

About Section:

It is showing the main objectives and which types of services are offering this website. It is showing a button to contact with the management authority.

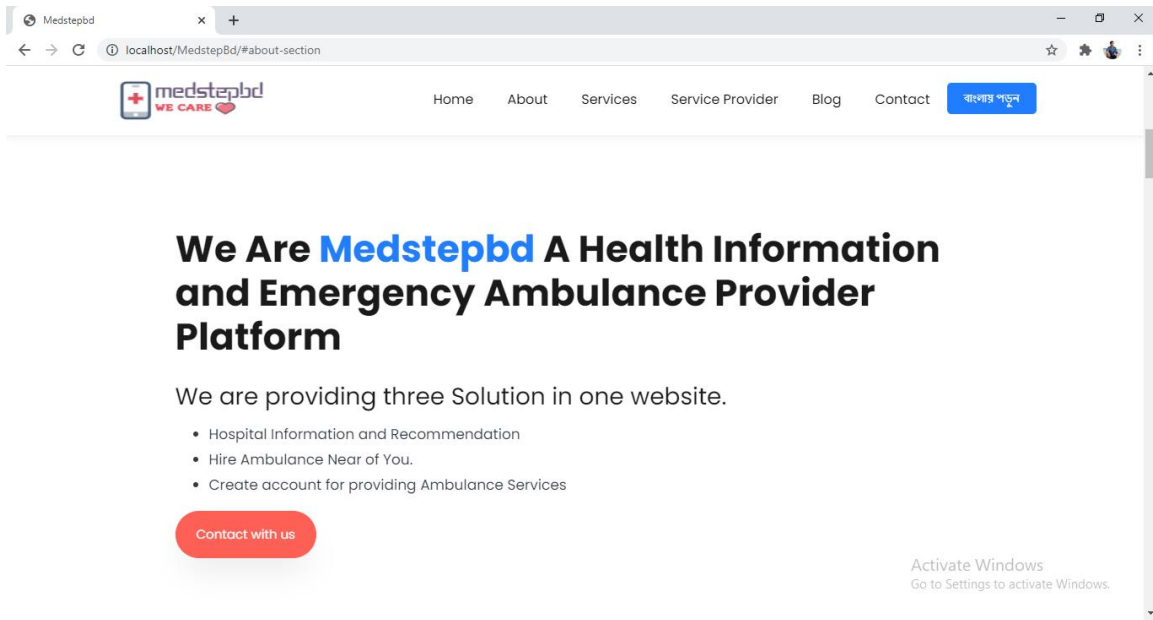

Fig 4.1.2: About Section

Service Section:

It is displaying the Service Options.

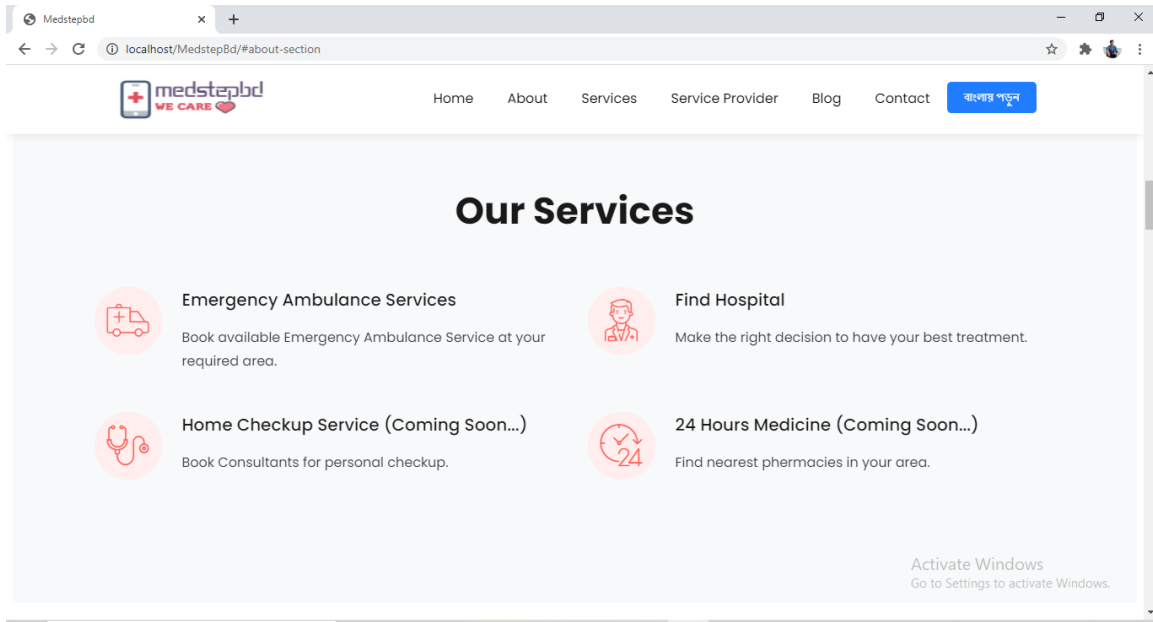

Fig 4.1.3: Service Section

Blog Section:

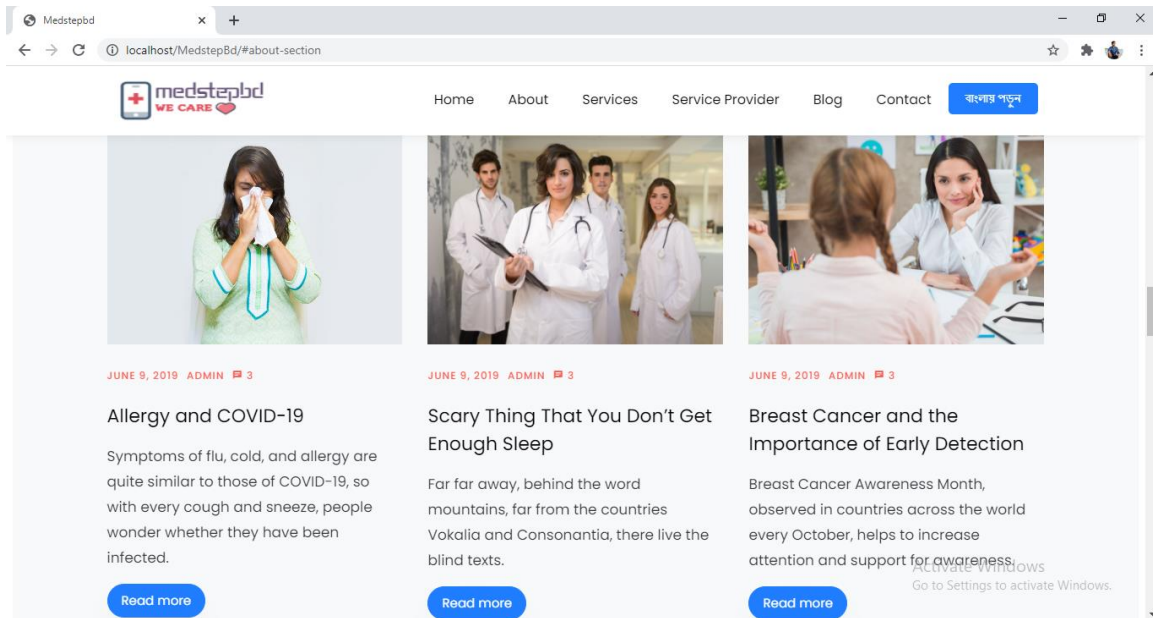

Fig 4.1.4: Blog Section

Contact Section:

Find Ambulance page

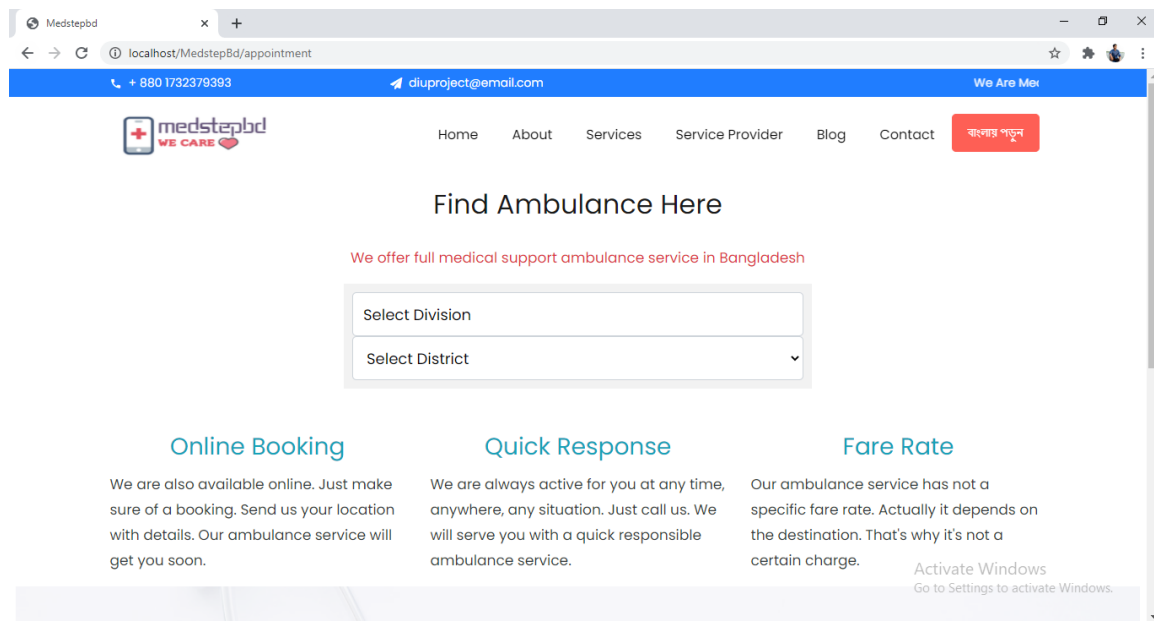

Fig 4.1.6: Find Ambulance Page

Ambulance Details Page:

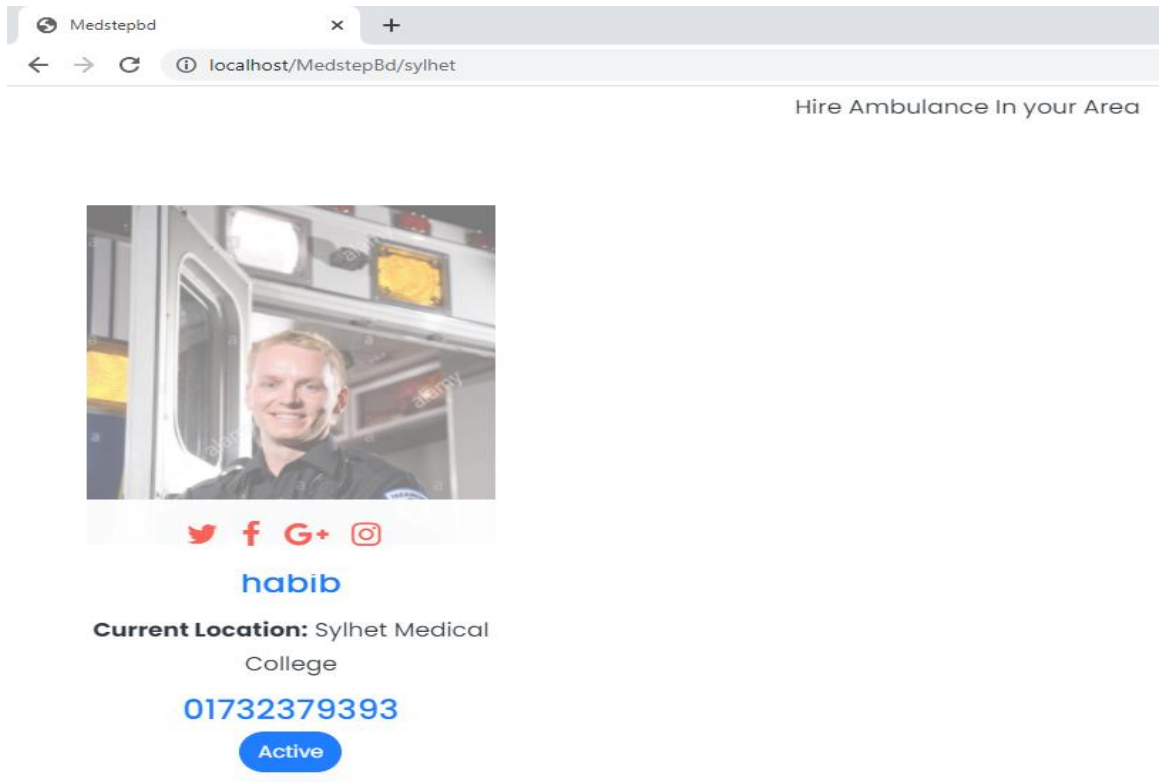

Fig 4.1.7: Ambulance Details Page

Find Hospital Page:

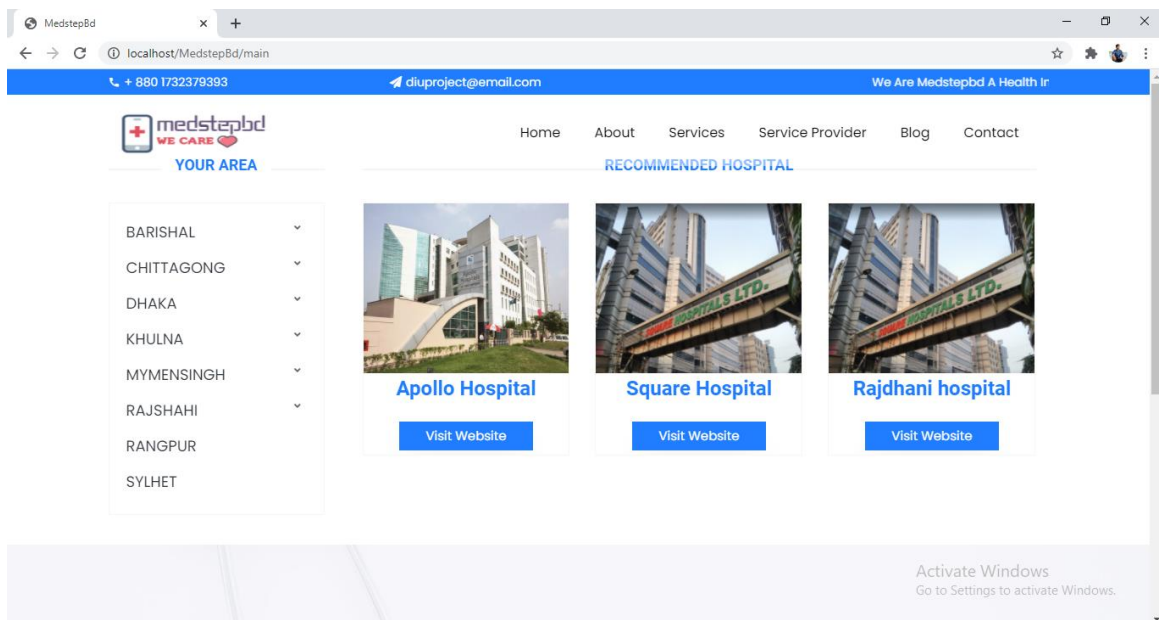

Fig 4.1.8: Find Hospital Page

Hospital Details page:

The screenshot shows the 'Hospital Details page' for Evercare Hospital Dhaka. The page features a blue header with contact information: + 880 1732379393, email: diuproject@email.com, and 'ider Platform'. The main navigation includes Home, About, Services, Service Provider, Blog, and Contact. The 'medstepbd WE CARE' logo is prominently displayed. A 'YOUR AREA' dropdown menu lists various locations: BARISHAL, CHITTAGONG, DHAKA, KHULNA, MYMENSINGH, RAJSHAHI, RANGPUR, and SYLHET. The central content area includes a photograph of the hospital building, a Google Map showing the location of Evercare Hospital Dhaka (Plot 81 Block, E, Dhaka 1229) with a 3.9-star rating and 1,202 reviews, and a 'Visit Website' button. Below the map, there is a section for 'Apollo Hospital' with a star rating and a 'Drop Review Here' button. The footer contains an 'Activate Windows' notification.

Fig 4.1.9: Hospital Details Page.

Hospital Review Page:

Service Provider Page:

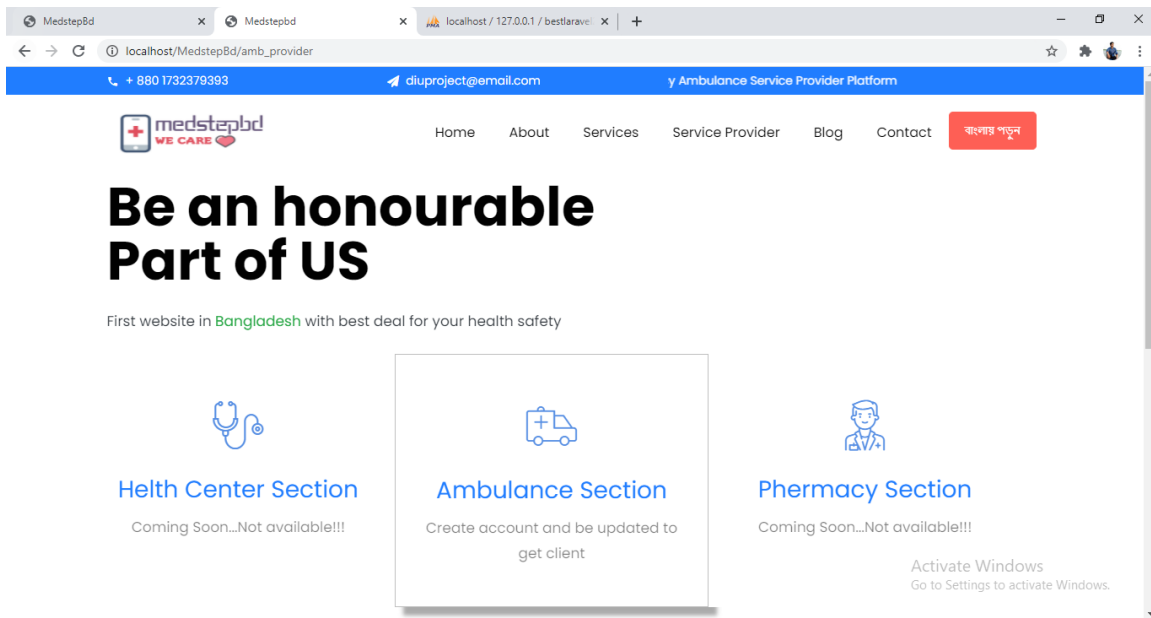

Fig 4.1.11: Service Provider Page

Ambulance Service Provider Login Page:

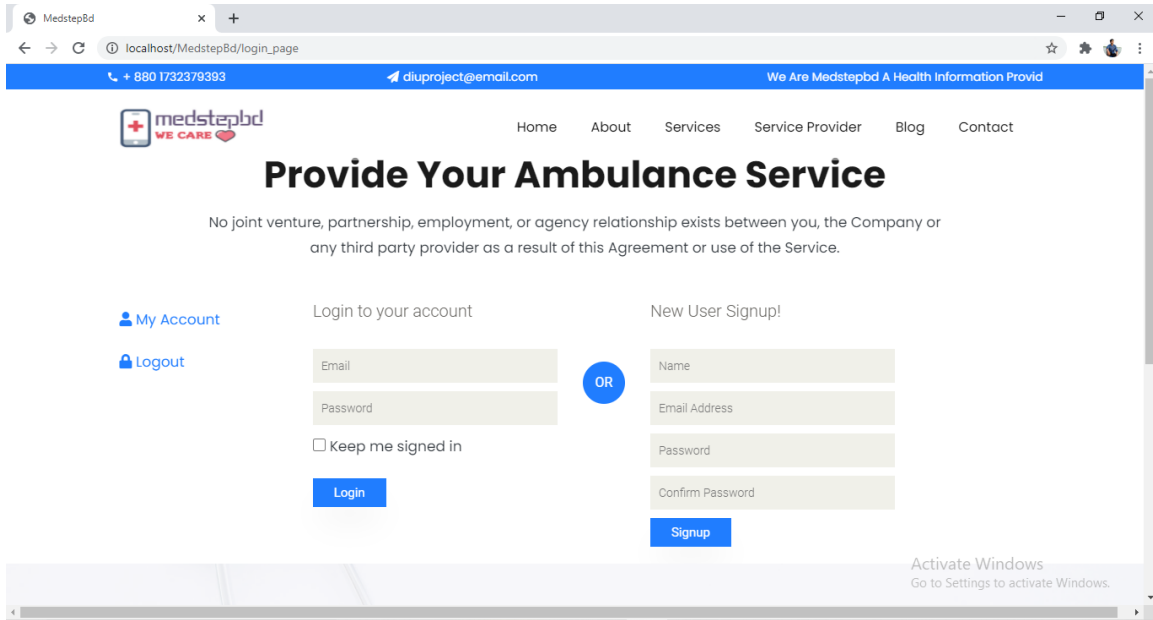

Fig 4.1.12: Ambulance Service Provider Login Page

Ambulance Account Page:

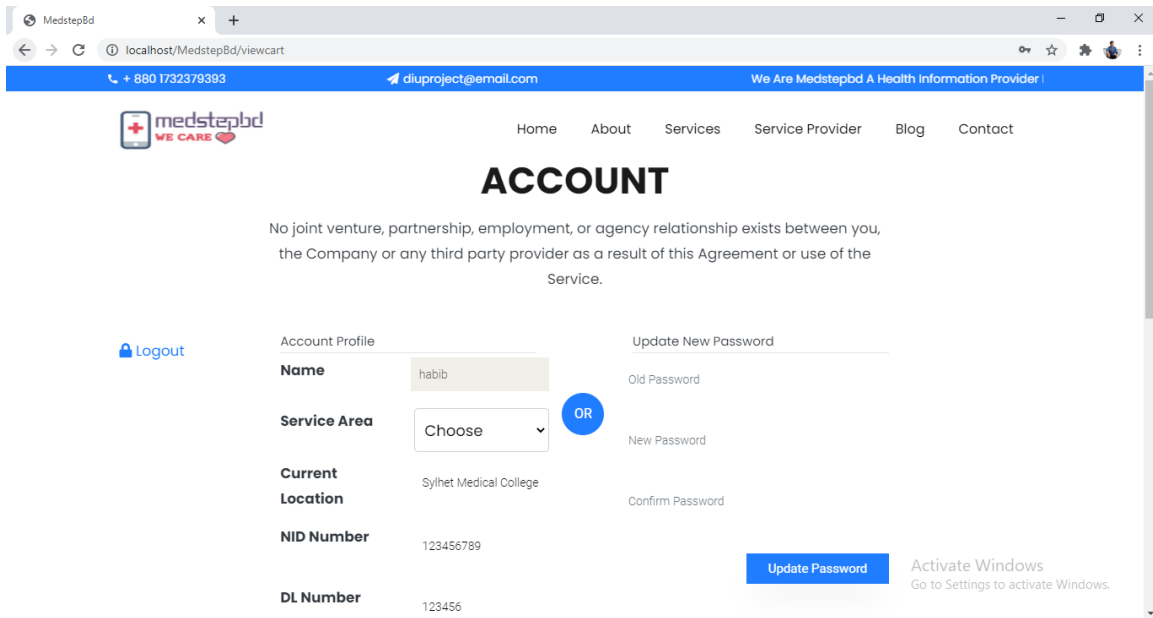

Fig 4.1.13: Ambulance Account Page

4.2 Back-end Design

We have implemented Backend design for administrative controlling. Admin will be able to control the site from backend by login with admin account.

Admin Login Page:

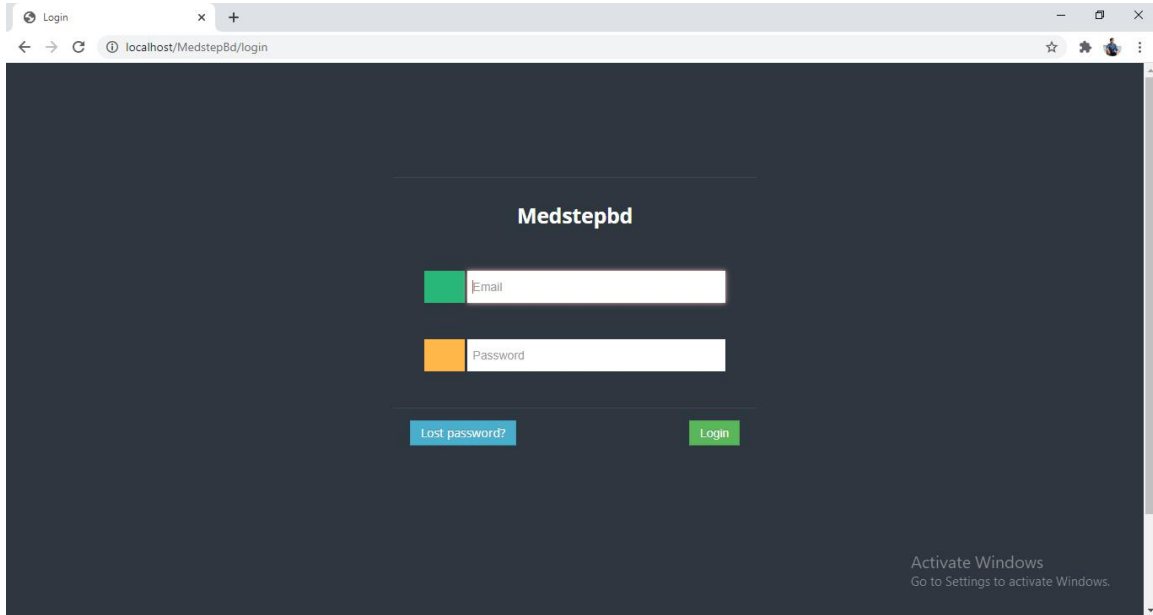

Fig 4.2.1: Admin Login Page

Admin Dashboard:

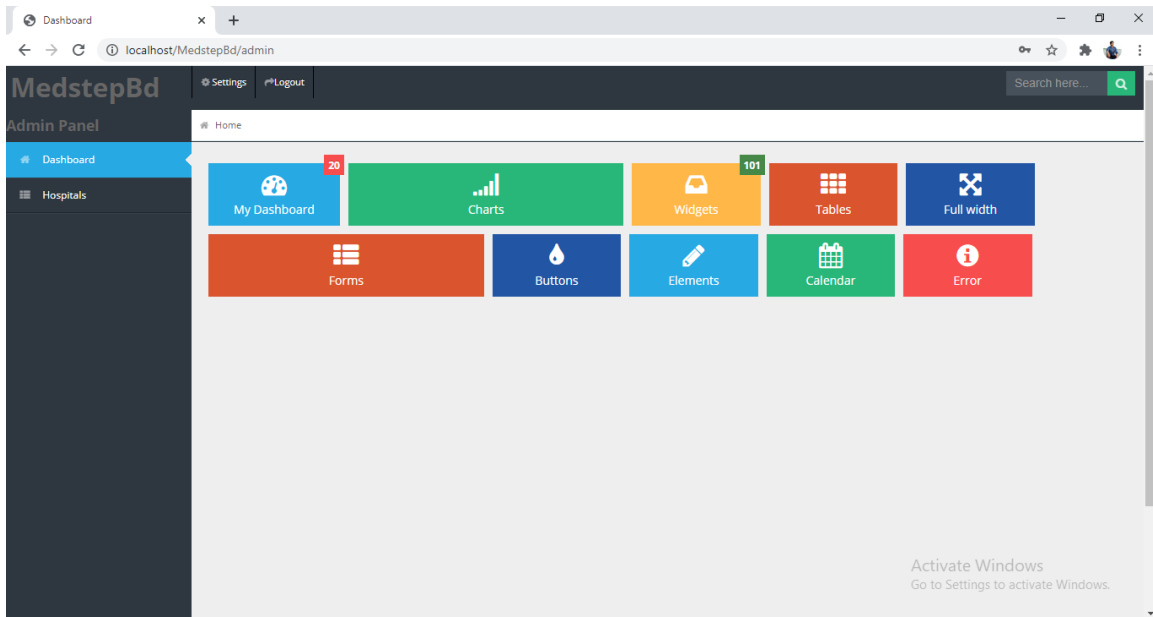

Fig 4.2.2: Admin Dashboard Page

Add Hospital Page:

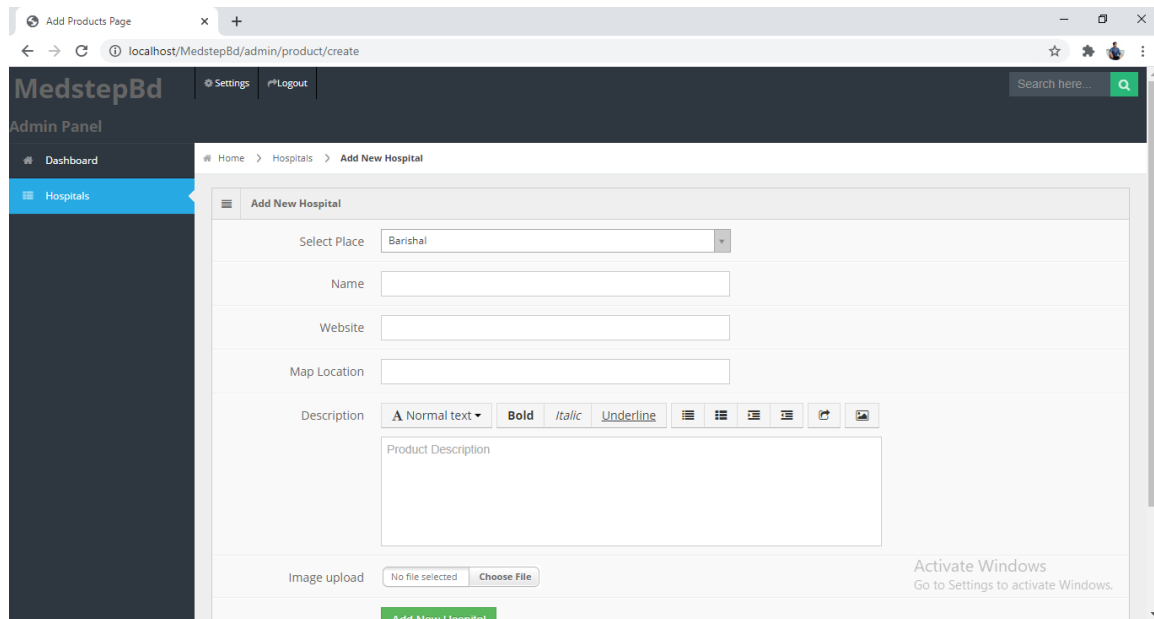

Fig 4.2.3: Add Hospital Page

List of Hospital Page:

There is some options to Update, Delete and Controlling the Hospitals.

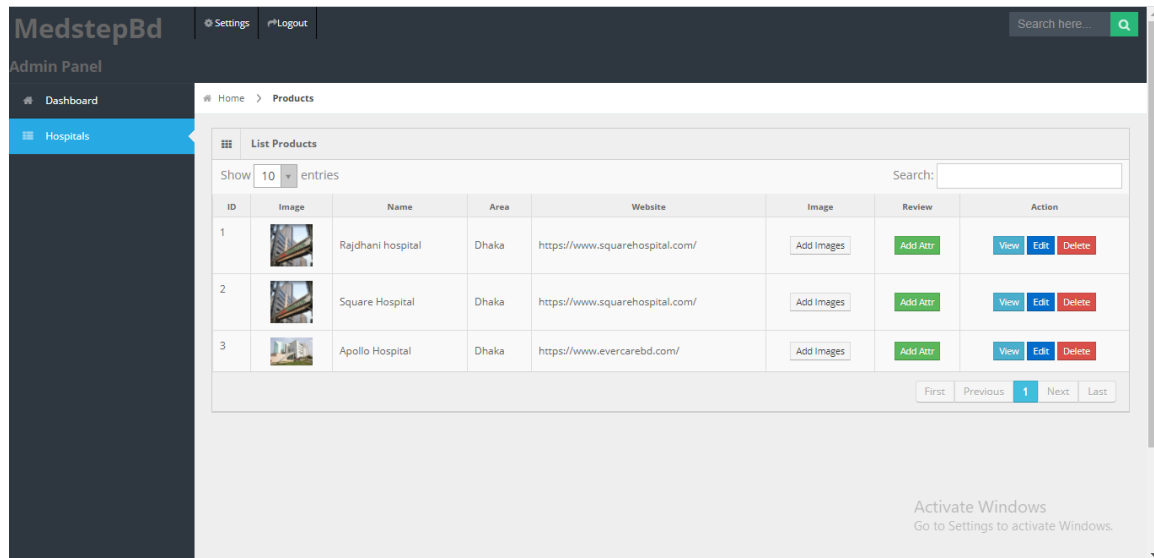

Fig 4.2.4: List of Hospital Page

4.3 Interaction Design and User Experience (UX)

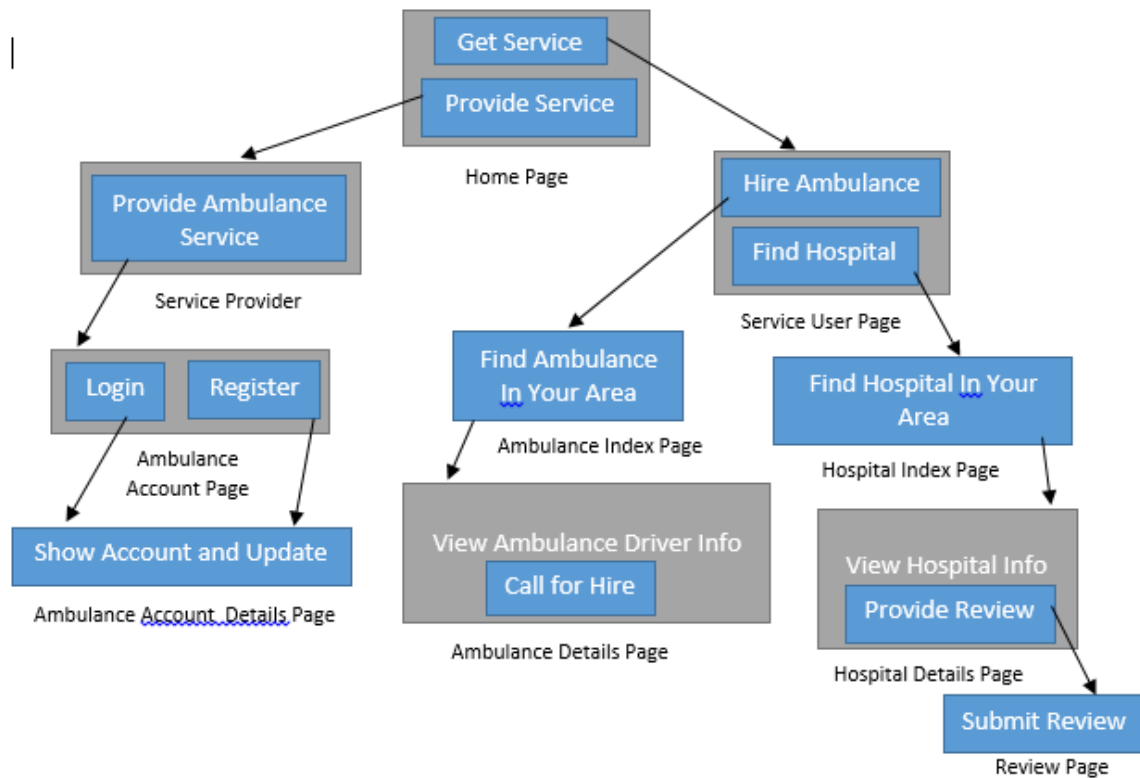

Fig 4.3: Interaction Design

CHAPTER 5 IMPLEMENTATION AND TESTING

5.1 Implementation of Database

We have used MySQL to implementing database to our website. SQL is most popular and hugely used in websites and application development. It is suitable for implementing web application all over the world. It has been used for storing and fetching data for our website.

Database implementation description:

- Hospital Information, their Images are stored to the database by admin.
- Hospitals Review and ratings are added from the input form given by the use of the website.

- Ambulance Service Provider information will be added by the service provider, they are also able to update by login to their account with their registered email and password.
- Several options which are controlling input option and navigations those were added by developers to database.

5.2 Implementation of Front-end Design

Any website's usability and Looks depends on Frontend design implementation. More refined frontend design offers more acceptancy to its users. How much frontend design will be refined and straight forward it will be much acceptable and user friendly to its user.

For our website's frontend design we have used the following languages and framework:

Framework:

Bootstrap: We used the latest version of popular CSS framework Bootstrap 4. Bootstrap is a fully free open-source framework of CSS used for responsive web applications. It helps to design responsive websites without coding a lot of lines.

Languages:

HTML: HTML refers Hyper Text Markup Language. Most of the web developers use HTML language for creating Web pages. Structure of a Web page can be described by HTML. It describes how to display and arrange the elements in browser.

CSS: CSS refers Cascading Style Sheets. CSS describes how elements will be arranged and how colors will be displayed. It perform for design various contents, fonts, and colors for presentation and their seperations.

JQuery: We have use some JQuery (JavaScript Library) to add some fascinating animation to improve the looks of our webpage.

5.3 Testing Implementation

There is so many features and options in our MedstepBd website. To test our project we have to check out all of our features and options of our website to examine that all of our options are working or not. We have checked the options and compare with expected outcome.

Options which are declared in navigations are listed below:

- Home
- About
- Services
- Service Provider
- Blog
- Contact
-

We had to check all options individually. At first we had to run our project by local server in our personal computer.

Home: When we are in Homepage of the website and click the option it will reload the same page. But when we browse the another page and click on this option or Logo it will return to the Homepage

About: It will drive to the About Us section which is belongs to Homepage.

Services: It should take to the service section by clicking on that option where we shall get another two options:

- Emergency Ambulance Service
- Find Hospital

Service Provider: By clicking that option it will refer to the **Service Provider** Page, where we shall get the **Ambulance Service Provider** Option.

Blog: It will show the Blog section belongs to Homepage will show by clicking this option.

Contact: By clicking that option it will refer to the **Contact** section, where we shall get the **Contact Information** with the management system authority of that website.

There are also some subpages:

Under **Take Your Service** Option

- Find Hospital Page:
- Hospital Detail Page
- Hospital Review Page
- Emergency Ambulance Service Page
- Find Ambulance Page
- Ambulance Information Page

Under **Service Provider** Option:

- Service Provider Page
- Ambulance Service provider Account Login , Register Page
- Account Page

For Backend Controlling we shall get more pages with several options:

- Admin Login Page
- Admin Dashboard
- Add New Hospital
- List of Hospital Page

5.4 Test Results and Reports

We have evaluated all options action and text that if those are working as expectation or not. Before making available to its user it should be ensured its functions accuracy to be accept by its users.

Table 5.5: Testing result of Specified Options:

Serial No	Testing Option	Expected Outcome	Actual Outcome	Result
.1	Clicking On Logo	Home Page	Home Page	Pass

CHAPTER 6

IMPACT ON SOCIETY, ENVIRONMENT AND SUSTAINABILITY

6.1 Impact on Society

MedstepBd is the website which offering the option to choose hospital by evaluating Review and Ratings. It is providing the facility to give the feedback of the services of Hospitals and Clinic By own review and Ratings. Ata time it is providing the Location Information, Direction to find Hospital, Official webpage link. It can take a great Impact to improve the clinics Service quality which is blessings for all of us in our society.

On the other hand It makes a great opportunity to get clients for the Ambulance Service Provider. A great part of our unemployment young generation can join for providing

ambulance service providing by registration on this website. Our Ambulance service providers are being more available to the public users through online.

At the same time it is ensuring the more possibility to get ambulance in emergency time in required area.

6.2 Ethical Aspects

To fulfil this website main objectives and goals we should maintain some Ethical aspects which has been described below:

- User should give the actual review and ratings.
- Admins will have to evaluate the information of this website is right or wrong because it can have a great impact to any patient.
- Every information and data should checked and updated within a short period of time.
- Ambulance service provider should give their actual information about them and their availability.
- Since there is option to book ambulance by phone call so they should demand their charge by maintaining actual fare rate.
- Ambulance service provider should service their clients with full professional responsibility.

CHAPTER 7

CONCLUSION AND FUTURE SCOPE

7.1 Discussion and Conclusion

If **MedstepBd** can provide the correct information about Hospitals and clinics it can help its user in many ways. Review and recommendation is depending on its user. If they help to meet its goal by providing their valuable feedback and ratings it can become a useful and informative website for the users which actually near the right information to get the proper decisions to have treatment.

Our ambulance service provider can serve their service with responsibility it can be a best platform to get ambulance in emergency time and can bring a revaluation t this sector in our country and can have a better impact to service provider and user both sides.

7.2 Scope for Further Developments

We are determined continue for development process of this website in future. In future we want to add some more services so that it may be more batter and useful.

Updated version of this website will offer more services for its user. This website is essential for the mass population. We are expecting in recent future when everyone will be most dependable on the networking technology then everyone will like to use this type of technology and that time our project will be more popular among the mass population. For near future we have some expected plans and ideas to add some more services in this website:

- Online checkup service.
- Online Pharmacy and medical Equipment service.
- Digital payment system for Ambulance service.
- Ambulance locator using google API.

Etc..
