Tax Payment System

Submitted by

Md. Janip Ali Helal

ID: 171-35-2046

Department of Software Engineering

Daffodil International University

Supervised by

Kaushik Sarker

Assistant Professor & Associate Head

Department of Software Engineering

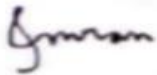

Daffodil International University

This Project report has been submitted in fulfillment of the requirements for the Degree of
Bachelor of Science in Software Engineering.

APPROVAL

This project titled on “Tax Payment System”, submitted by Sadman Fahim Arpan (ID: 171-35-2046) to the Department of Software Engineering, Daffodil International University has been accepted as satisfactory for the partial fulfilment of the requirements for the degree of Bachelor of Science in Software Engineering and approval as to its style and contents.

BOARD OF EXAMINERS

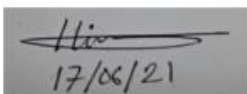

Dr. Imran Mahmud
Associate Professor and Head
Department of Software Engineering
Daffodil International University

Chairman

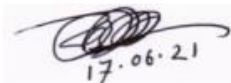

Md. Shohel Arman

DECLARATION

I hereby declare that project titled “Tax Payment System” has been completed by me under the supervision of Kaushik Sarker, Assistant Professor & Associate Head, Department of Software Engineering, Daffodil International University for the purpose of achieving degree of Bachelor of Science from Daffodil International University. This is also declared by me that neither this project nor any part of this project has been used or submitted elsewhere for any kind of degree or awards.

.....
Md. Janip Ali Helal

Supervisor

ACKNOWLEDGMENT

First and foremost, all the praise and thanks go to the Almighty Allah for all the blessings for all my project work, giving me patience and enabling me to complete this project on time.

I would like to express my special thanks to my respected supervisor Kaushik Sarker for giving me his proper direction and for helping me to finish all the work in the end. I am especially grateful to my supervisor for his assistance throughout the project. His excellent guidance, advice, valuable constructive advice, has made it possible for me to complete this project with confidence.

I am very blessed to have the opportunity to study at Daffodil International University. I would like to express my deep gratitude to our honorable department Head of Department, SWE, for encouraging me and giving me such an opportunity. I want to thank all my respected teachers who teach us in a great, interesting and understandable way. I am grateful to them for making my journey the easiest and most enjoyable.

I am grateful to my parents as well as all the members of the family. My whole study journey would not have been so easy without their endless support and co-operation.

I am grateful to all my department staff members, lab technicians and non-teaching staff members for their ultimate support throughout my journey.

Finally, I would like to express my love to my batch mates, to the DIU members for their kind co-operation and comfort that helped me finish all the work.

ABSTRACT

The essential goal of our project is to compile a client's tax summary or tax returns. After successfully submitting all of the paperwork, a client registers himself with the Tax Information System, enters all of his information, and uploads different documents that are required for the preparation of Tax Summary and Schedules for an interview. When all of the processes have been done, the admin prepares Tax Returns or Tax Overviews for all of the clients. The admin contacts the clients and arranges an appointment to address different topics related to the Tax Overviews.

If the customer has paid the fee for the preparation of his Tax Summary, he will download his Tax Summary in PDF format.

CHAPTER 1

INTRODUCTION

1.1 Project Overview

In recent years, several developed countries have implemented tax reforms. Local conditions as well as the accelerated internationalization of economic practices prompted such changes. Local considerations hastening tax changes included the need to address fiscal imbalances and the transition from a centralized strategy to a market economy. Due to the difficulty of reducing spending, tax reform has been an important part of the fiscal stabilization plan. The move from strategy to market necessitated the replacement of administered rates with market-determined prices, the replacement of physical controls with financial controls, and the replacement of physical controls with financial controls and the replacement of public-sector gains with tax revenues.

In a globalizing climate, tax changes are also essential. To improve competition and encourage international investment, the tax system's performance and enforcement costs must be reduced. Globalization also results in a lack of customs revenue, which must be offset with domestic revenues. In reaction to changes in growth policy, Bangladesh's tax system had to be reformed as well. Bangladesh's taxation system is well-developed. Bangladesh's tax system is mostly a two-tier system focusing on the central government and local government organizations. Local councils and counties are the most common examples of these local authorities.

1.2 Project Purpose

The purpose of this document is to describe all the requirements for the targeted Tax payment Govt. of Bangladesh. The intended audience includes all the Citizen of Bangladesh in the potential system. These include, but are not necessarily limited to, the following: Government Employee, Tax officer, Circle, Officer, Tax payer.

Developers should consult this document and its revisions as the only source of requirements for the project. They should not consider any requirements statements, written or verbal as valid until they appear in this document or its revision.

The Government Employee, Tax officer, Circle, Officer, Tax payer should use this document and its revisions as the primary means to communicate confirmed requirements to the development team. The development team expects many face-to-face conversations that will undoubtedly be about requirements and ideas for requirements. Please note that only the requirements that appear in this document or a future revision, however, will be used to define the scope of the system.

1.2.1 Tax Calculation

In this system, we can calculate all types of taxes. In our country people of different professions make a living through different means such as agriculture, government jobs, private jobs, owners of different institutions, teachers and many other people living in our country and earn money in different ways. If a person earns 500,000 takas from agriculture, his tax amount will be 25,000 takas. If there are children with disabilities in the family, the number of taxes decreases and the number of taxes increases based on the value of the property deposited. Different districts and Upazilas are different for each region of the union.

1.2.2 Benefits & Beneficiaries

We have beneficial aspects of this solution. They are pointed out below:

- Ensure better revenue distribution,
- Efficient collection of revenue,
- User-friendly service,
- Higher rate of collection,
- Standard solutions for all tax types in whole tax system,
- Integrated solution for all revenue types,
- Significant decrease of costs and faster tax collection.

1.2.3 Goals

- Make the project in Live server
- People Will use it for his/her next tax payment
- Build National awareness to Make our Country More Developed.
- Tax calculations and payments are easy for people of all professions.

1.3 Stakeholders

There are three types of Stakeholders in our Solutions. They are:

- **Area Officer**

In the TPS the major and sensitive role is played by the Area Officer, in TPS this role is played by the Main character. The Area officer will check and validate all the process of Tax payment. Audit Circle officer work and tax payer details report.

- **Circle Officer**

In the TPS the secondary important role plays by circle officer, He can check the report of tax payer and audit tax payer properties information.

- **Tax Payer**

The role of a tax payer is also a most important role because, it's the main primary actor of our system. A tax payer can register in the system and input validated information for calculate how much max he/she have to pay. And see his/her report, and track his/her tax payment process in home. He /She can payment the tax using online mobile banking system or credit card.

1.4 Project Schedule

Project Schedule is important for every project to complete on time.

1.4.1 Gantt Chart

It is a graphic view of overtime-planned tasks. It's a very efficient way to show on a particular day what work is planned to be completed. It also helps to demonstrate the start and finish times of my project.

Activities		W 1	W 2	W 3	W 4	W 5	W 6	W 7	W 8	W 9	W 10	W 11	W 12	W 13	W 14	W 15
Planning	Ideas	█

1.4.2 Project Timeline

The Project timeline record is given below:

Task	Date
Topic Selection Seminar	20/10/2020
Brainstorming Project Topic & Name Selection	21/10/2020 – 27/10/2020
Submit Project Proposal	28/10/2020
Requirement Specification	29/10/2020 – 10/01/2021
Mid Term Defense	25/02/2021
System Analysis & Design	27/02/2021 – 25/03/2021
Development System	27/03/2021 – 18/05/2021
System Testing	21/05/2021 – 25/05/2021
Complete Project	26/05/2021

Table 1.4.2: Project Timeline

CHAPTER 2

SOFTWARE REQUIREMENT SPECIFICATION

Functional requirement: Tax Payer

Requirement ID	FR.TP.1
Requirement Name	Log in
Description	Tax Payer can log in using user name and password

Requirement ID	FR.TP.2
Requirement Name	Calculate Tax
Description	Customer can Calculate Tax

Requirement ID	FR.TP.3
Requirement Name	Select Assessment From
Description	Customer can Submit Tax Information in Assessment From

Requirement ID	FR.TP.4
Requirement Name	Tax Payment
Description	Customer can Pay Tax

Requirement ID	FR.TX.5
Requirement Name	Select Report
Description	Customer can See Details about his Tax

Functional requirement: Circle Officer:

Requirement ID	FR.CO.1
Requirement Name	Log in
Description	Circle Officer can log in using user name and password

Requirement ID	FR.CO.2
Requirement Name	See Tax Payer Submission
Description	Circle Officer can see all Tax Payer Submission

Requirement ID	FR.CO.3
Requirement Name	Submit Report for Tax Payer
Description	Circle Officer can Submit Report

Functional requirement: Area Officer:

Requirement ID	FR.AO.1
Requirement Name	Log in
Description	Area Officer can log in using user name and password

Requirement ID	FR.AO.2
Requirement Name	Assessment Tax Payer Return
Description	Area Officer can Assessment all Tax Payer

Requirement ID	FR.AO.3
Requirement Name	Action for Tax Payer
Description	Area Officer can Action for Tax Payer

2.3 Performance Requirements

Reliability, safety, security, and availability are all part of the dependability criterion, but reliability is the most important. These requirements are also required.

2.3.1 Capacity Requirements

Both forms of user data must be handled by the device.

CR-1	System will handle many data
-------------	------------------------------

Description	The system must be able to accommodate a wide range of data types.
Stakeholder	Area Officer

2.4 Dependability Requirements

Four dimensions are used to assess dependability. Availability, Reliability, Safety, and Security are only a few examples. As a result, our device must meet these four dimensions.

2.4.1 Reliability Requirements

The likelihood that the machine will run without loss is referred to as reliability.

RR-1	System must be available 24/7
Description	The system must be available at all times, updated, and free of malware.
Stakeholder	N/A

2.4.2 Fault-Tolerance Requirements

It is critical to ensure 0% crash and correct performance for consumers in order to ensure fault-tolerance.

FTR-1	Without a single device bug, the system manages all user data.
Description	Both users will use our system at the same time, and the system must manage requests without errors.
Stakeholder	N/A

2.4.3 Safety-Critical Requirements

In my project, there are no safety-critical requirements.

2.5 Maintainability and Supportability Requirements

It is important to provide after-sales assistance or service to end customers.

2.5.1 Maintenance Requirements

MR-1	System helps to manage tax payer
-------------	----------------------------------

Description	It is very important.
Stakeholder	Area Officer

2.5.2 Supportability Requirements

There is some dimension of supportability requirements. They are:

- Maintainability
- Configurability
- Compatibility
- Serviceability

2.5.3 Adaptability Requirements

There are no adaptability requirements of my project.

2.6 Security Requirements

The importance of security specifications for device solutions cannot be overstated. It should be based on practical needs. Software Protection is concerned with the application system's security.

There are some specifications in terms of protection. They are:

- Sign in an area officer, circle officer or tax payer.
- Get access according to logged in user.
- Sign out as an area officer, circle officer or tax payer.

2.6.1 Access Requirements

In my project, there is no prerequisite for entry.

2.6.2 Integrity Requirements

In my project, there is no provision for authenticity.

2.6.3 Privacy Requirements

In any scheme, it is important to have privacy standards. Any consumer can join the system by checking their details and using their accessibility settings to ensure privacy.

2.7 Usability and Human-Interaction Requirements

The primary goal of any device solution is to make it user-friendly and simple to use.

2.7.1. Ease of Use Requirements

Our Solution is easy to use and understandable

EUR-1	System must be usable & easy for the user
Description	This solution is easy for user to manage system
Stakeholder	Area Officer, Circle Officer and Tax Payer

2.7.2 Understandability Requirements

In my project, there are no well-defined criteria.

2.7.3 Accessibility Requirements

In my project, there are no clear usability criteria.

2.7.4 User Documentation Requirements

In my project, there are no conditions for user documentation.

2.7.5 Training Requirements

In my project, there are no training specifications.

CHAPTER 3

SYSTEM ANALYSIS & DESIGN

3.1 Use Case Diagram

There are two actors in our use case diagram. This diagram will refine my project in details

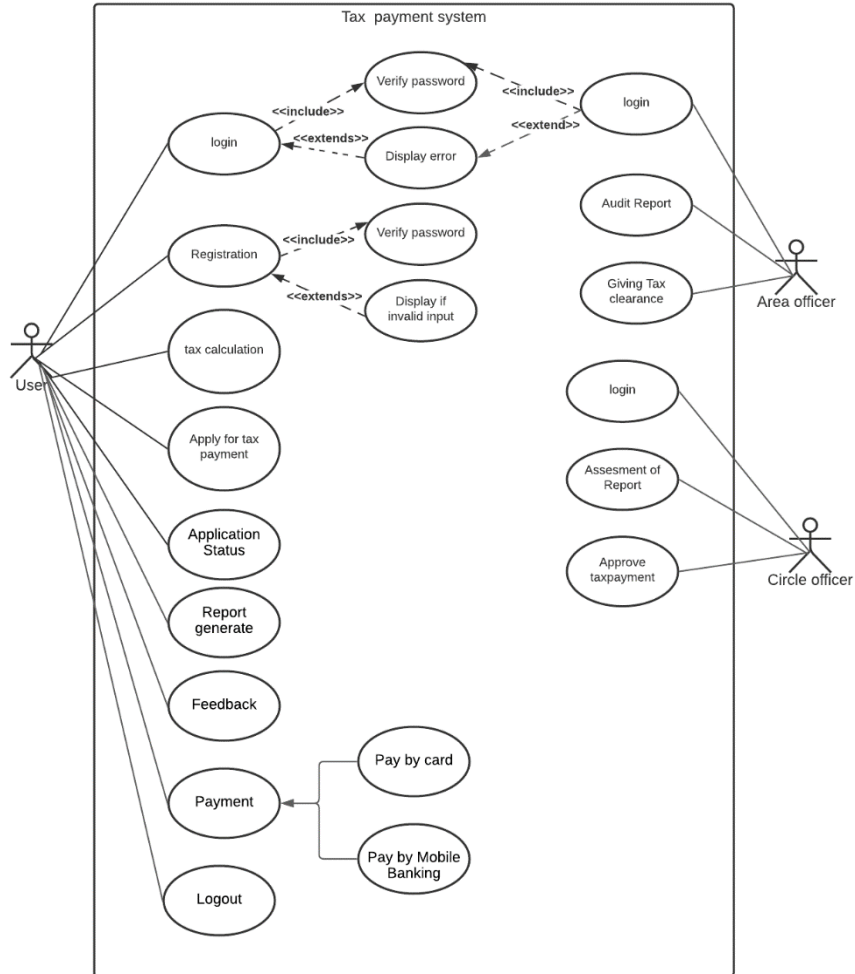

Figure 3.1: Use case for tax payment system

3.2 Use Case Description

3.2.1 User Description

Name of Use Case:	Tax Payer
Description:	Tax Payer Input Information, Submit Return, Calculate Tax, Tax Payment
Actors:	Tax Payer
Preconditions:	<ol style="list-style-type: none">1. Tax Payer must be Registered2. Must be Submitted Information3. Must be Calculate Tax
Postconditions:	<ol style="list-style-type: none">1. Tax Payer must use Payment gateway option2. See Report
Flow:	<ol style="list-style-type: none">1. Tax Payer Registration Account for Payment2. Select Tax Return Information3. Input All Information4. Calculate Tax Charge5. Tax Charge Payment6. View Feedback /Report
Alternative Flows:	5. In step 5 of the normal flow, if the tax payer Payment by Credit Card or Mobile Banking.
Exceptions:	
Requirements:	The following requirements must be met before execution of the use case <ol style="list-style-type: none">1. Tax Payer Must be Registered2. Must Be Input Details Tax Return Information

3.2.2 Circle Officer Description

Name of Use Case:	Circle Officer
Description:	Circle Officer Assessment Tax Payer Information and Submit Report
Actors:	Circle Officers
Preconditions:	1. Officer Must be Registered
Postconditions:	
Flow:	<ol style="list-style-type: none">1. Circle Officer Login their Portal2. See Tax Payer Details3. Assessment Tax Payer Return Document4. Create Reports
Alternative Flows:	
Exceptions:	
Requirements:	The following requirements must be met before execution of the use case <ol style="list-style-type: none">1. Must Be Registered

3.2.3 Area Officer Description

Name of Use Case:	Area Officer
Description:	Area Officer See Assessment Report, See Payment, See Details and Action against Tax Payer
Actors:	Area Officers
Preconditions:	1. Officer Must be Registered
Postconditions:	
Flow:	1. Area Officer Login their Portal 2. See Tax Payer Details 3. See Assessment Reports 4. Take Action
Alternative Flows:	
Exceptions:	
Requirements:	The following requirements must be met before execution of the use case 1. Must Be Registered

3.3 Activity Diagram

3.3.1 User Registration Activity

Users can register with their correct information then will have to verify the email verification.

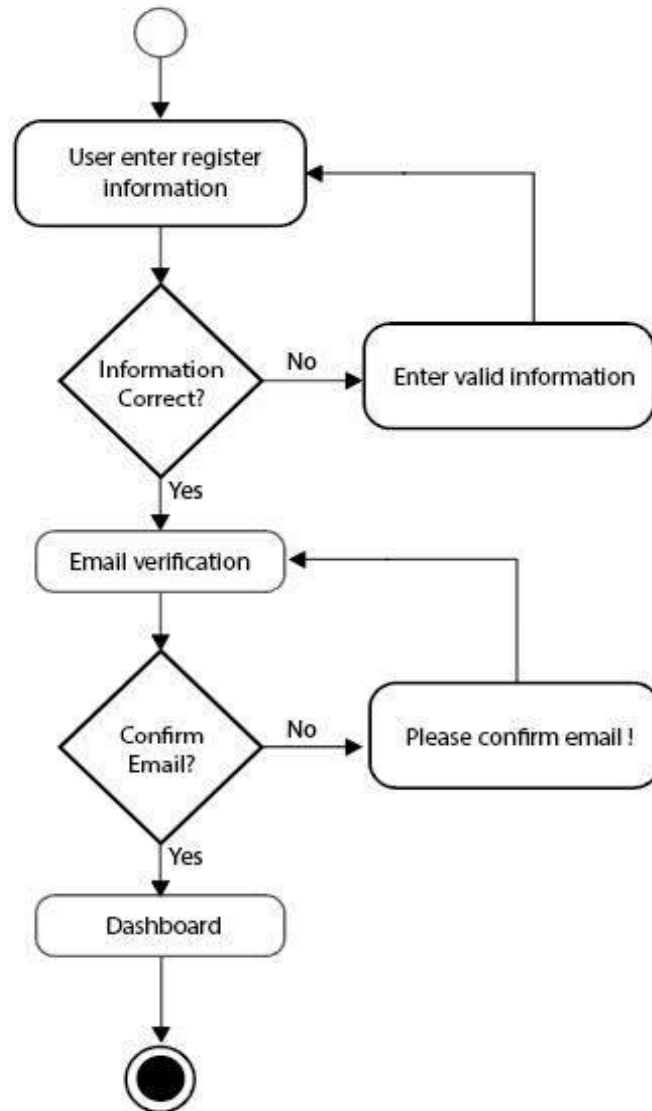

Figure 3.3.1: User Registration Activity Diagram

3.3.2 User login Activity

Users can login with their email and password

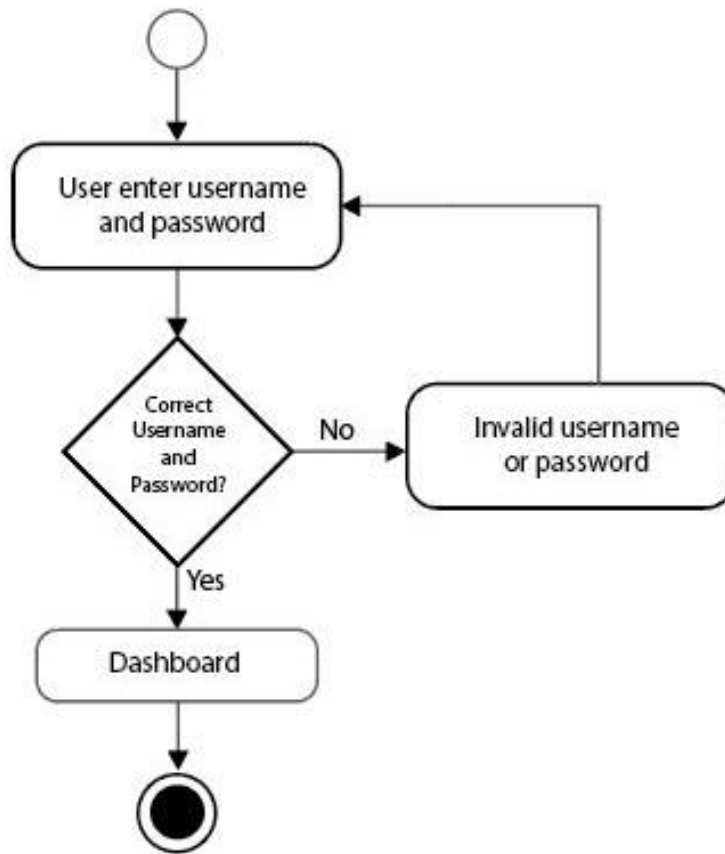

Figure 3.3.2: User login Activity Diagram

3.3.3 User Tax Calculation Activity

This method will be used to calculate the amount of tax to be paid to the user.

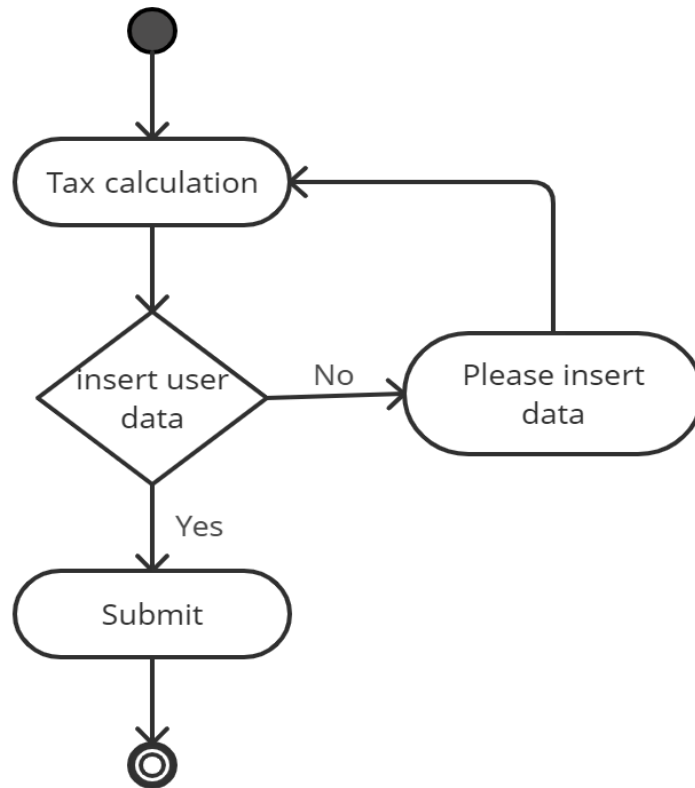

Figure 3.3.3: User Tax Calculation Activity Diagram

3.3.4 Taxpayer Apply for payment Activity

The taxpayer has to give the correct information for tax payment.

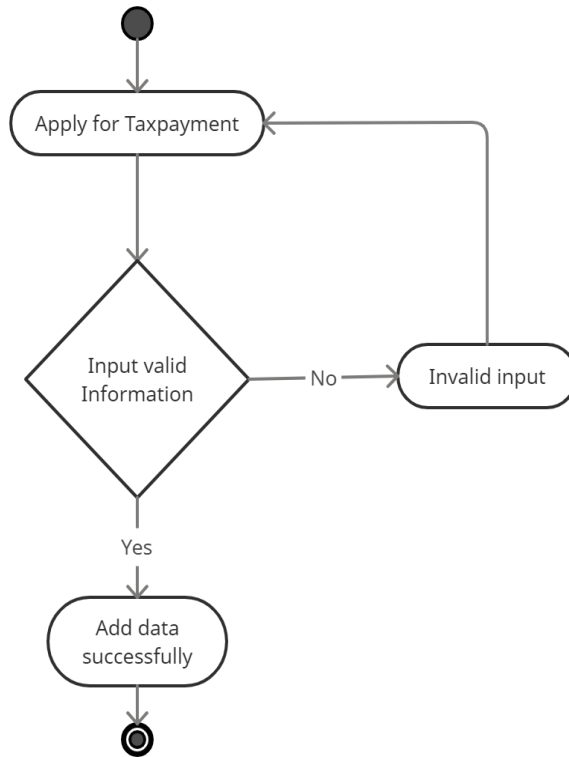

Figure 3.3.4: User Apply for Tax payment Activity Diagram

3.3.5 Audit report Activity

Admin can check report.

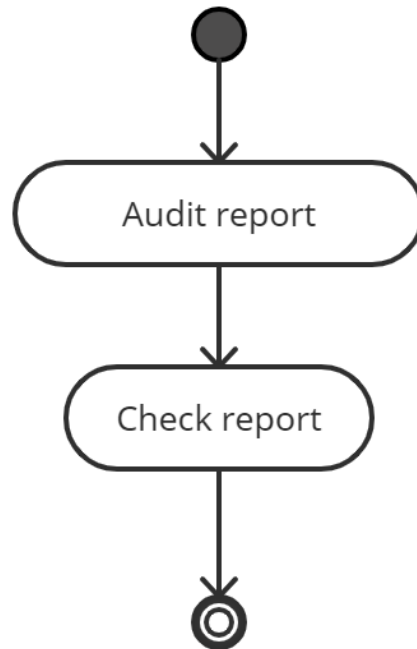

Figure 3.3.5: Audit report Activity Diagram

3.3.6 Giving tax calculation Activity

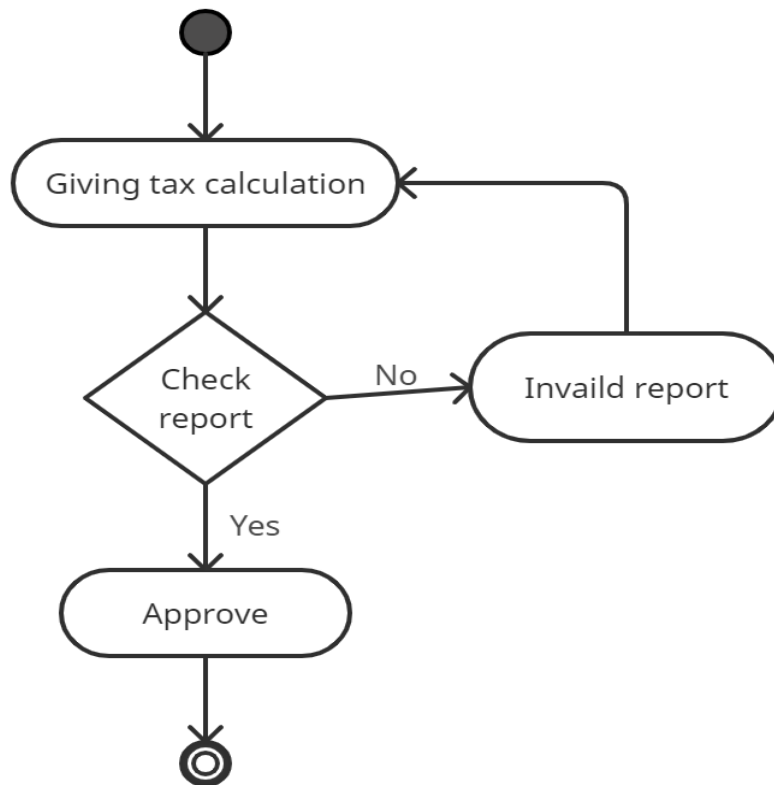

Figure 3.3.6: Giving Tax calculation Activity Diagram

3.3.7 Report Assessment Activity

This method will check whether the taxpayer is paying the tax at the right time.

Figure 3.3.7: Report Assessment Activity Diagram

3.3.8 Payment Activity

Users can make payments through mobile banking or card.

Figure 3.3.8: Payment Activity Diagram

3.3.9 Feedback Activity

The user will give feedback with this method.

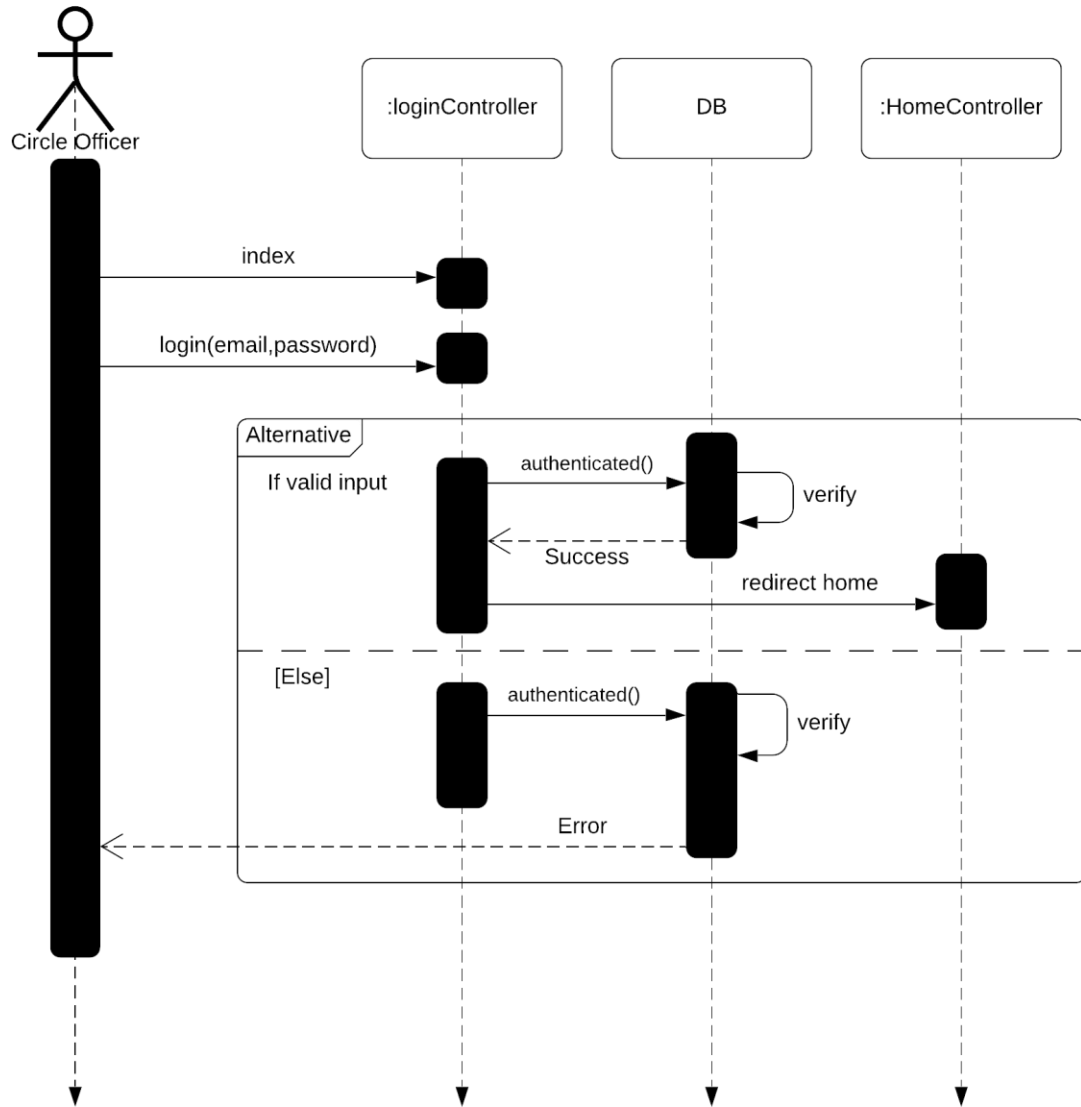

Figure 3.4.4: Circle Officer Sequence Diagram

3.4.5 Area Officer

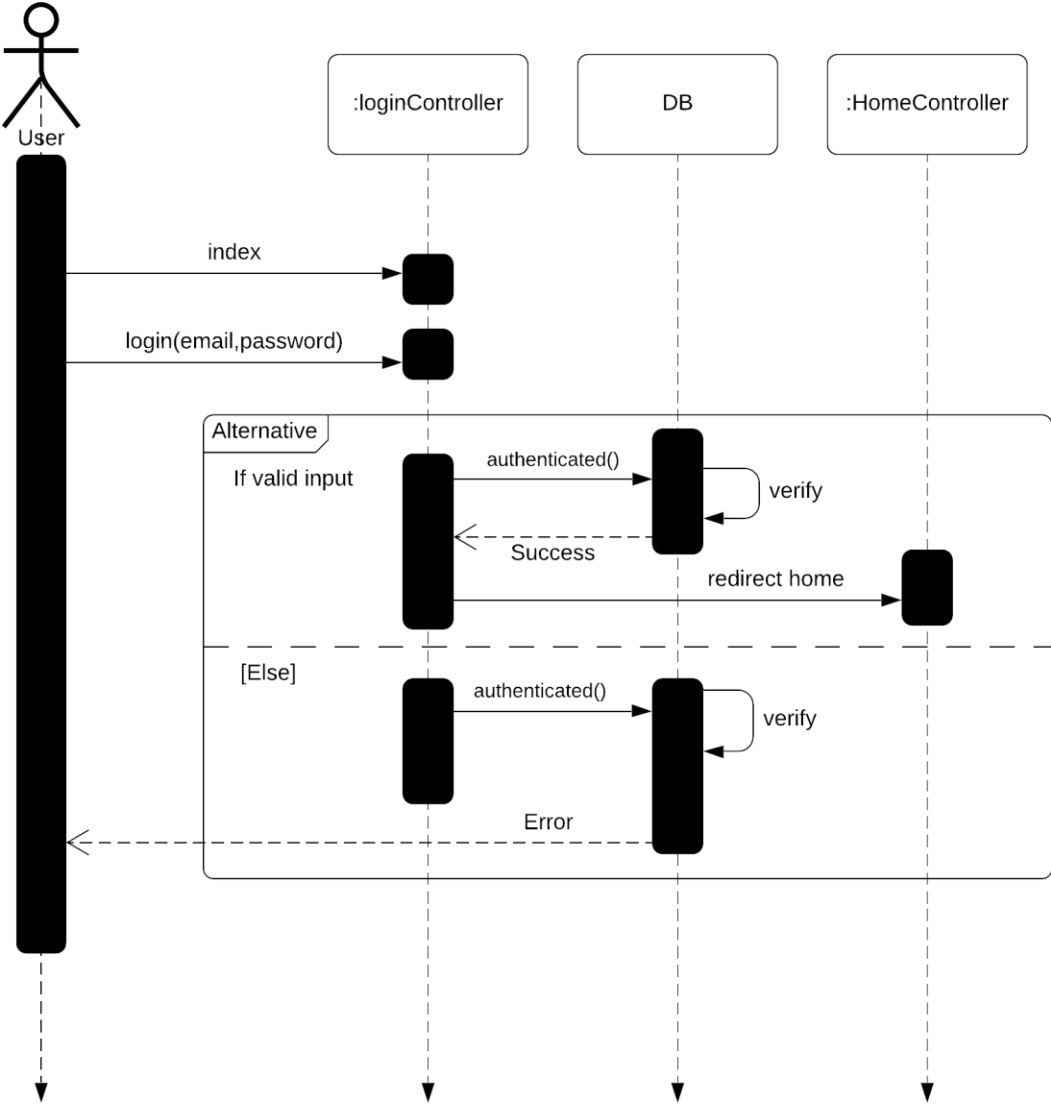

Figure 3.4.5: Area Officer Sequence Diagram

3.5 System Entity Relation Diagram

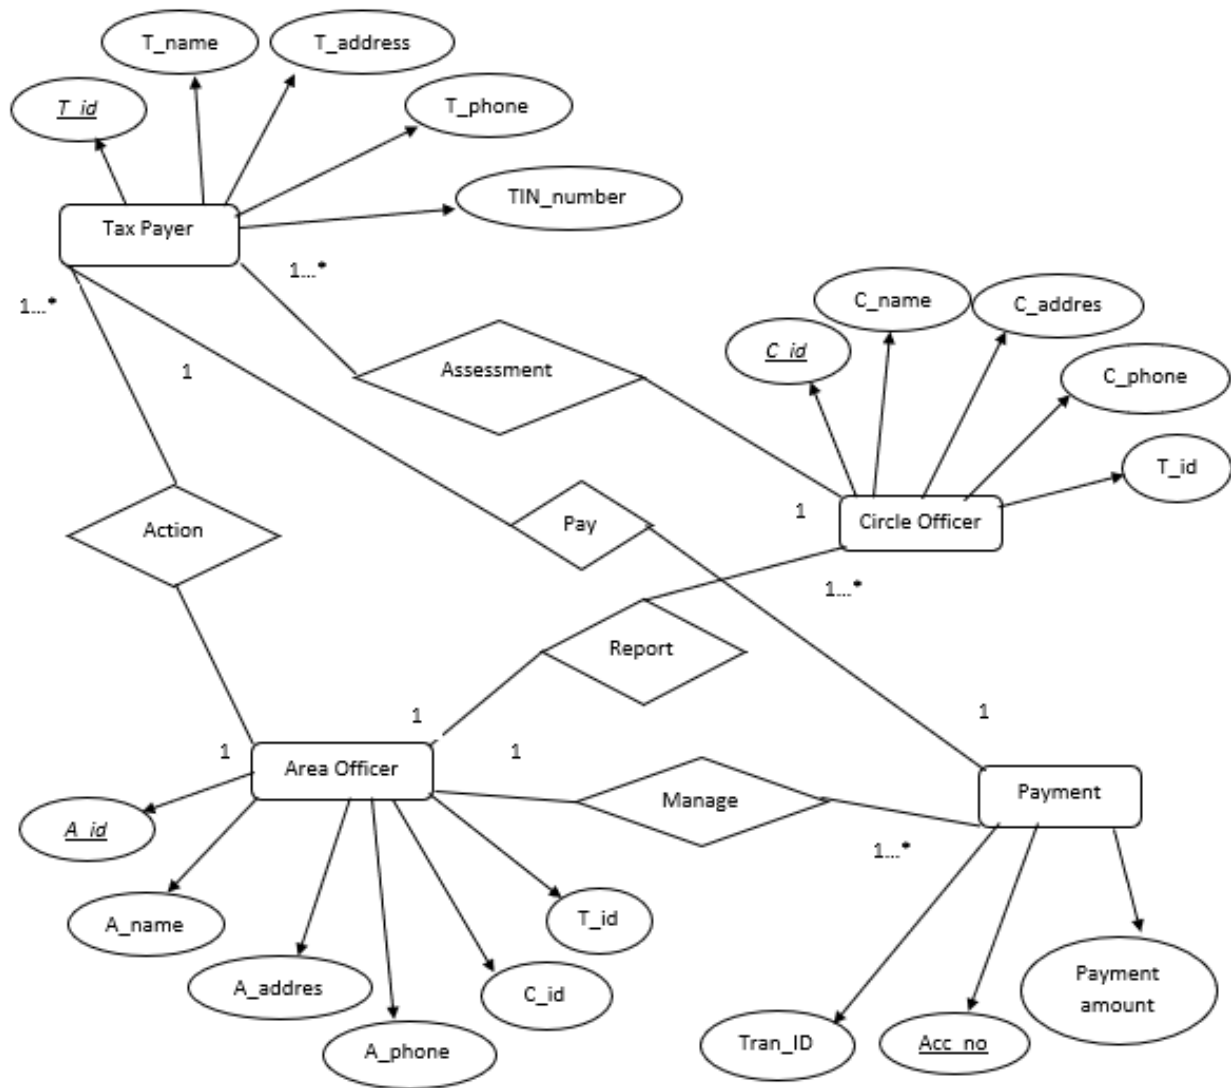

Figure 3.5: Entity Relation Diagram

3.7 Design and Implementation Constraints

3.7.1 Framework or Software Language:

The user interface for “Tax Payment System” is created using the Laravel system and a bootstrap prototype, with data stored in a MySQL database.

3.8 Development Tools and Technology:

- IDE: Sublime Text
- Database: MySQL
- UI: HTML, CSS, Bootstrap, JavaScript
- Framework: Laravel 6
- Language: PHP
- Web-Server: XAMPP Server

3.9 Project Organization

3.9.1 Software Process Model

The Waterfall Model was the first Process Model to be applied. In a Waterfall model, each step must be finished before the next phase can begin, and there is no overlap between the phases. The waterfall model was the first SDLC technique used in software creation. In "The Waterfall" approach, the entire software production process is broken down into phases. The output of one stage is used as the starting point for the next move. This implies that each stage of the creation process begins only if the previous stage has been completed. The waterfall model is a sequential modeling mechanism in which creation is seen as continually streaming downward through the phases of conception, initiation, analysis, design, construction, testing, production/implementation, and maintenance (like a waterfall).

The Waterfall Model is also known as a model of the linear sequential life cycle because it represents the process of software development in a linear sequential flood.

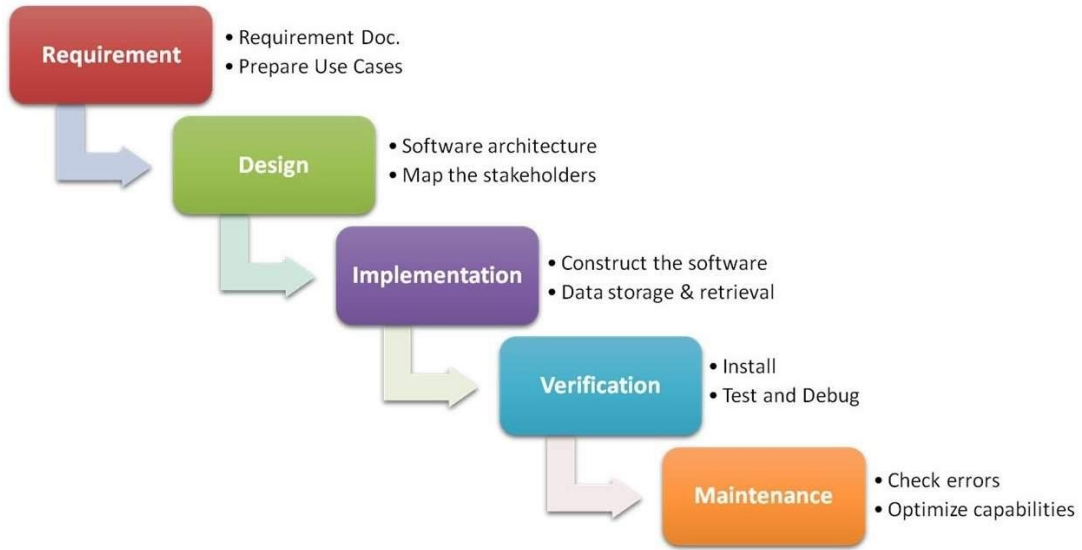

Figure3.9.1: Waterfall Model

CHAPTER 4

SYSTEM TESTING

4.1 Testing Features

Testing is described as an operation that verifies that the actual results match the expected results and ensures that the system is defect-free. Testing functions can be seen as a way to bring more flexibility to a current project or modify it.

4.1.1 Features to be tested

There are some features below:

- Login
- Tax Calculation

4.2 Testing Strategies

Each part of the program is handled differently by test methods. It's a collection of detailed guidelines for the test's existence and each stage of the scenario. It outlines which methodology to be used and which modules should be reviewed.

4.2.1 Test Approach

Checking is one of the most important aspects of any software project. It demonstrates the utility of apps. It also aids in the detection of program flaws and defects. As a result, the user perceives the software to be simple and error-free. Without using any automated tools, I manually evaluated and validated each work.

4.2.2 Test Category

- Integration Testing
- Module Testing

4.2.3 Success/Failed Criteria

The pass/fail test criteria will be decided by the test engineers. It all boils down to how well all of the requirements work together. When the test results are satisfactory, a pass or a failure will be determined. In any case, I'm certain that I'll graduate with flying colors. It would be considered an error if a function does not perform properly during the test.

4.3 Testing Environment

There are some key areas to set up for testing

- Operating System
- Browser
- System
- Application
- Database server
- Test data
- Network

4.4 Test Cases

Testing Case No-1 (Integration Testing)

Test Case ID.1	Module name: User, Circle Officer & Area Officer
Test Priority: High	Test Date:18.05.2021
Test Title: User & Officer's Login Verification with valid email & password	Test executed by: Md. Janap Ali Helal
Description: Test User's & Officer's Login Page	Test executed date: 18.05.2021
Pre-condition:	Users must have valid email and password.
Test steps:	<ol style="list-style-type: none">1. Go to login page2. Provide valid email & password3. Click Sign in button
Test Data:	User's: Email: test@gmail.com Password: test Officer's: Email: janip@gmail.com Password: 123456
Expected Results:	User should able to login
Actual Result:	User logged in successfully
Status (Pass/Fail):	Pass
Post-condition:	Successfully Logged in.

Table 4.4.1: Testing Case (User & Officer's Login)

Testing Case No-2 (Module Testing)

Test Case ID.2	Module name: Tax calculation
Test Priority: High	Test Date:18.5.2021
Test Title: Add teacher with validation	Test executed by: Md. Janip Ali Helal
Description: Tax Calculation	Test executed date: 18.05.2021
Pre-condition:	User must login and insert valid data
Test steps:	<ol style="list-style-type: none">1. After login go to Tax calculation2. Click tax calculation3. Insert data all the field4. Click Submit button
Test Data:	
Expected Results:	User add Successfully
Actual Result:	User add Successfully
Status (Pass/Fail):	Pass

CHAPTER 6

PROJECT SUMMARY

6.1 GitHub Link

<https://github.com/>

6.2 Limitations

I ran into several roadblocks in the way. I'm still studying the required technologies, but I haven't been able to overcome these obstacles yet. But I'm optimistic that given enough time, I'll be able to study advanced topics and improve the code significantly.

Mobile version: The user would choose it on their mobile device because it is a travel-related app. I was unable to create a mobile version of the program due to my lack of experience with mobile devices and a lack of time.

6.3 Obstacles and Achievements

From the beginning of the process, I've gained much too much useful information for developers.

To begin with, I have no idea how to properly create a design, such as how to write algorithms and diagrams for project work such as database design. Before now, I had no idea what the algorithm meant or how much of it a programmer needs to construct a project. Many key aspects of the language I used to develop this structure are critical. Before starting the logical section, I check to see if the database architecture and project UI are complete; if they are, then executing the code would be a breeze. In a summary, creating this software was a major milestone for me.

6.4 Future Scope

The software being developed is the software of good quality. I'm doing my hardest to fulfill the true need for the stage of the procedure. But still, there is space to expand more. I have introduced the program and do my hardest to produce an exceptional system.
