# APPROVAL

This thesis/project/internship titled on "RyzicMix [Music Streaming Service]", submitted by Arif Hossain Emon, ID:181-35-2459 to the Department of Software Engineering, Daffodil International University has been accepted satisfactory for the partial fulfillment of the requirements for the degree of Bachelor of Science in Software Engineering and approval as to its style and contents.

## BOARD OF EXAMINERS

Chairman

Dr. Imran Mahmud  
Associate Professor and Head  
Department of Software Engineering  
Daffodil International University

Internal Examiner 1

Nusrat Jahan  
Assistant Professor  
Department of Software Engineering  
Daffodil International University

Internal Examiner 2

Khalid Been Badruzzaman Biplob  
Senior Lecturer  
Department of Software Engineering  
Daffodil International University

External Examiner

Professor Dr M Shamim Kaiser,  
Professor  
Institute of Information Technology  
Jahangirnagar University

## DECLARATION

It hereby declares that this project has been done by **Arif Hossain Emon** under the supervision of **Mr. Khalid Been Badruzzaman Biplob**, Lecturer (Senior Scale), Department of Software Engineering, Daffodil International University. It also declares that neither this project nor any part of this has been submitted elsewhere for award of any degree.

## ACKNOWLEDGEMENT

I am highly indebted to **Mr. Khalid Been Badruzzaman Biplob** for their guidance and constant supervision as well as for providing necessary information regarding the project & also for their support in completing the project.

Besides, we would like to thank all the teachers who helped us by giving us advice and providing the equipment which we needed.

## **ABSTRACT**

Ryzic Mix is a web-based music streaming service that gives you access to listen to all kinds of songs.

Basic functions such as playing free type music are totally free, but you can also choose to upgrade to Premium.

If you have Premium, you can:

- played unlimited songs
- download unlimited songs

# **CHAPTER 1**

## **INTRODUCTION**

### **1.1 Project Overview**

Ryzic Mix is a web-based music streaming service that gives you access to listen to all kinds of songs.

This program enables you to search for music by artist name, song name and album name. You can use this website to create your own favourite-list.

### **1.2 Project Purpose & Motivation**

Within the past few a long time, patterns in music utilization have experienced a significant change.

The quick Web infiltration and the dynamic utilize of versatile gadgets have driven the development and advancement of hundreds of music applications like Apple Music, Spotify, Shazam, SoundCloud.

But as a web developer, I want to create my own music streaming website, where people can listen to music, they can purchase premium level to get premium things like:-

- premium songs
- download songs

### **1.3 Objectives**

Over the last few decades, music listening has progressed significantly. The days of having to purchase CDs, vinyl records, or cassette tapes are long gone.

You no longer need to purchase digital downloads. Nowadays, all you have to do is join up for a music streaming service and you'll have instant access to all the music you'll ever need.

### **1.4 Expected Outcome**

You'll also want to consider things like streaming audio quality and support for extra features, like digital assistants and more.

With all those factors in mind, I tried the best music streaming services you can subscribe to.

Our picks feature a variety of options, including several services that offer lossless audio and a couple that offer free ad-supported plans.

## **BACKGROUND**

### **1.5 BENEFITS**

This music streaming website is fully functional and flexible.

- It is very easy to use.
- It is Where People Listen to Music
- It Has Facilitated Easy Distribution of Music
- It Has Encouraged People to Pay for Music...Again
- It Has Enabled Artists to Better Analyze How People Interact With their Music

### **1.6 GOALS**

- To produce a web-based Music streaming service that allows customers to register and listen to music.
- Company to effectively manage their website to ease customer's task whenever they need to listen to music.

## 1.7 STAKEHOLDERS

Stakeholder refers to any person or group who will be affected by the system (web site) directly or indirectly.

Stakeholders include end-users who interact with the system and everyone else that may be affected by its using.

Concluding thoughts on Stakeholders, We identified following stakeholders for our Web site:

- User (internal/external)
- Admin
- Staff

## 1.8 GANTT CHART

## **CHAPTER 2**

### **BACKGROUND STUDY**

#### **2.1 Methodology**

The methodology to be used is Agile Method. This is because the system will be standing alone with a new prototype within very short span. It will therefore increase the chances of the system to be reviewed by the user of the system at the end of each prototype to make any amendments necessary until the final prototype is released. This will help the system to be developed more efficiently with the user requirements fully met.

#### **2.2 RELATED WORK**

There are so many music streaming services that have a huge range of songs, podcasts, and support many devices.

All major platforms and there's a free, ad-based plan that requires a paid subscription.

some music streaming services:

- spotify
- Apple music
- Amazon Music Unlimited
- Youtube Music

## 2.3 CHALLENGES

In my suggested website, I plan to address all of the aforementioned concerns by implementing a whole "music streaming services" system that uses a coordinating software to manage the entire website.

I'm always trying to learn more about the technology that I use frequently.

I discussed with my companion and other brothers what features and facilities should be included in such a system if they decide to build one, and tried to gather as many criteria as possible.

## CHAPTER 3

### SOFTWARE REQUIREMENT SPECIFICATION

#### 3.1 FUNCTIONAL REQUIREMENTS

<b>FR-01</b>	<b>Registration</b>
<b>Description</b>	After filling the required data, the client can register himself/herself in our proposed system.
<b>Stakeholders</b>	Customers
<b>Priority</b>	High

<b>FR-02</b>	<b>Login</b>
<b>Description</b>	users will be able to Login into the system with his unique username,email and password.
<b>Stakeholders</b>	Customers,Staff,Admin
<b>Priority</b>	Hign

<b>FR-03</b>	<b>Search</b>
<b>Description</b>	User can search songs,based on ARTIST name,language and Album name.
<b>Stakeholders</b>	Customers
<b>Priority</b>	High

<b>FR-04</b>	<b>Favourite</b>
<b>Description</b>	user can add songs in favourite list.
<b>Stakeholders</b>	Customers
<b>Priority</b>	High

<b>FR-05</b>	<b>Recent Played song/History</b>
<b>Description</b>	User can Scroll through recently played/viewed songs.
<b>Stakeholders</b>	Customers
<b>Priority</b>	High

<b>FR-06</b>	<b>Free Membership</b>
<b>Description</b>	Users can listen limited free songs and can't download songs
<b>Stakeholders</b>	Customers
<b>Priority</b>	High

<b>FR-07</b>	<b>Paid Membership</b>
<b>Description</b>	Users can listen Unlimited songs and able to download unlimited songs.
<b>Stakeholders</b>	Customers
<b>Priority</b>	High

<b>FR-08</b>	<b>Add Employee</b>
<b>Description</b>	Admin can add staff
<b>Stakeholders</b>	Admin,Staff
<b>Priority</b>	Medium

<b>FR-09</b>	<b>Update/Add song to database</b>
<b>Description</b>	staff/admin can update/add songs in database
<b>Stakeholders</b>	staff,admin
<b>Priority</b>	High

### 3.2 Non-Functional Requirements

ID	Name	Description	Priority
NFR-01	Forget password	user can Reset their password through forget password.	High
NFR-02	security	Using token based authentication, session, it will be secure from unauthorized access.	High
NFR-03	Availability	The system should always be available for access at 24 hours, 7 days a week.	High
NFR-04	Maintainability	This way how easy to support, change and enhance the system.	Medium
NFR-05	performance	the customer can enter quickly,easy without any effort as an organized way and our web site will be more reliable.	High

### 3.3 SPEED AND LATENCY REQUIREMENTS

SLR-01	Data generate result must be faster
Description	<ul style="list-style-type: none"><li>• Dataset would be inserted in PostgreSQL Database using “Python manage.py make migrations”( command).</li><li>• UI design-build on the user fulfills table data set and Show.The database we have to use “python manage.py migrate”( command).</li></ul>
Stakeholder	All Users
Priority	High

### 3.4 ACCURACY REQUIREMENTS

For all type of users,it must be needed to accurate.

- All users are capable to show accurate page.
- staff/Admin can upload songs
- Free Membership users can listen limited songs
- Paid membership (Monthly/Yearly)
  - a. Unlimited song
  - b. Unlimited download

### 3.5 CAPACITY REQUIREMENTS

We must develop a system which is capable to handle database , manage http request etc

CR-01	This system will handle thousands of data
Description	User has so many info such as:song,membership profile,user favourite list etc.Thats why this system need to handle thousands of data every month.
Stakeholder	Admin
Priority	High

## **3.6 Dependability Requirements**

### **3.6.1 Reliability Requirements**

Here are the reliability requirements of RyzicMix

- Users can easily search song, add song to favourite list
- Premium users make online payment
- Admin/Staff can also update/add songs
- Users can see their song history

### **3.6.2 Availability Requirements**

Here are the availability requirements of RyzicMix:

- This system needs nginx server to load traffic.
- This system needs AWS S3 storage to handle data
- This website should run on any web browser

## **3.7 Security Requirements**

Web security is very important for making websites. I write some security related requirements are given below

- Authentication and password management.
- Authorization and role management.
- Audit logging and analysis.
- Network and data security.
- Code integrity and validation testing.

### 3.7.1 Access Requirements

Here some access requirements for RyzicMix

- Only for registered user can listen songs
- Paid membership can do listen unlimited songs and download songs
- Any public can visit this website

### 3.8 Privacy Requirements

- Here we are using activate and non-activate account system.
- All customer account info hidden from others.

### 3.9 Usability and Human Interaction Requirements

Usability requirements deal with how easy it is for an operator to make use of the system. Because there are two basic types of operators (humans and other systems), there are different approaches to expressing these requirements.

In general, usability when applied to system-to-system interfaces deals with the complexity of the interfaces, their ease of implementation, and their efficiency of operation.

#### 3.9.1 Ease of Use Requirements

Our application is easy to use and also easily understandable

EUR-01	This website must be usable for all types of users
Description	This website is enough usable to the customer and admin.
Stakeholder	User, Staff, Admin
Priority	High

### **3.10 Maintainability and supportability requirements**

#### **3.10.1 Maintenance Requirements**

- Check that all of your pages are loading without errors.
- Run a backup and make sure a previous version of your site is stored.
- Make updates to website software and plugins.
- Check that all of your forms are running properly.

#### **3.10.2 Supportability Requirements**

- When the system did not work perfectly then need to check database and others work
- Update all type of plugins

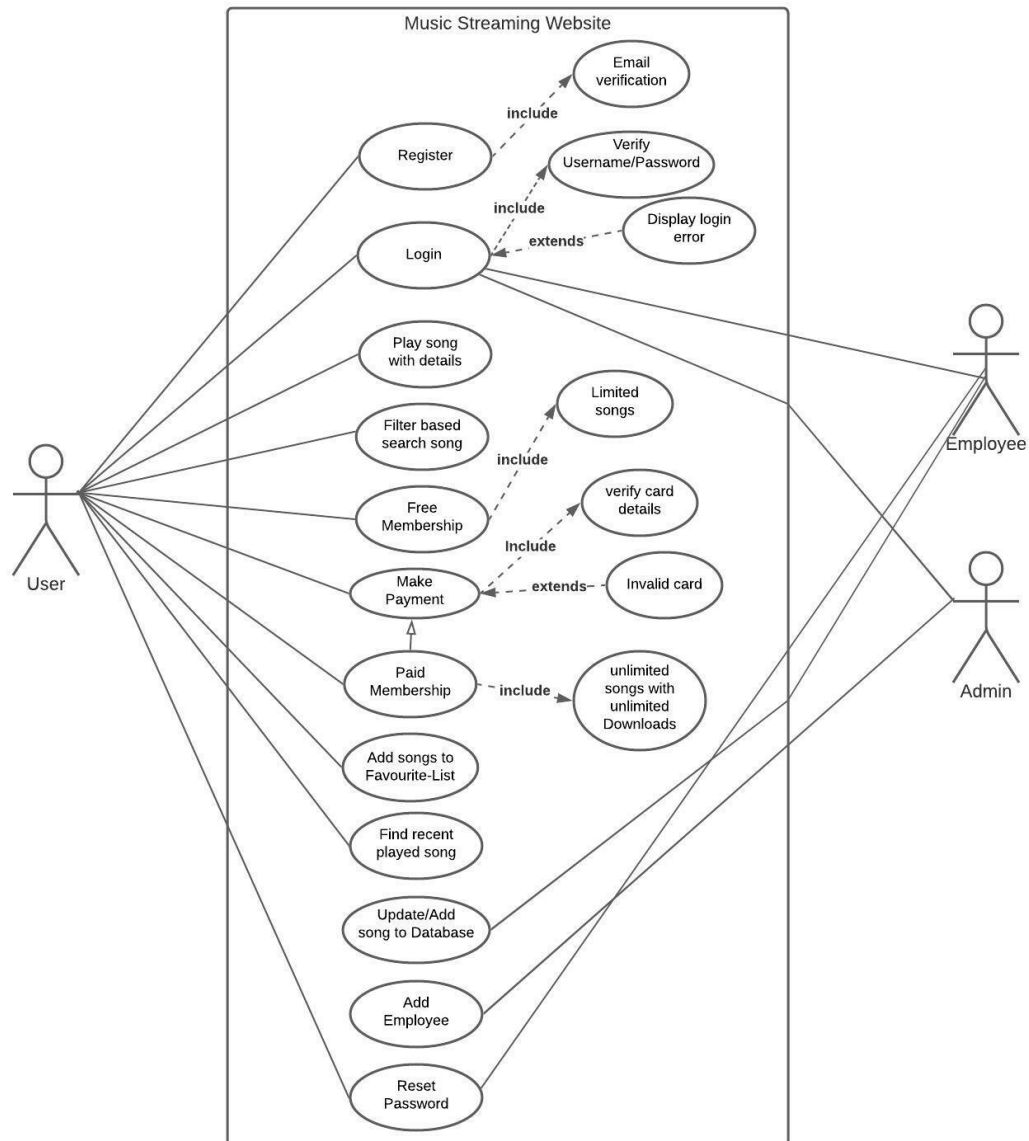

### **3.11 Adaptability Requirements**

- the customer can enter quickly,easy without any effort as an
- organized way and our web site will be more reliable.
- The system should always be available for access at 24 hours, 7
- days a week.

# CHAPTER 4

## SYSTEM ANALYSIS AND DESIGN

### 4.1 USE CASE DIAGRAM

## 4.2 USE CASE DESCRIPTION

### 4.2.1 Register

<b>Use Case</b>	Register
<b>Primary Actor</b>	User
<b>Goal</b>	Anyone can apply for register & get email verification and verify his/her account.
<b>Precondition</b>	Must be fulfill register required fields
<b>Trigger</b>	Access this website
<b>Scenario</b>	<ul style="list-style-type: none"><li>• User can register into this website</li><li>• Public enter the URL &amp; the url show the “registration” pages.</li><li>• Public enter all required information into “Registration” form</li><li>• Get email verification</li><li>• Verify his/her account</li></ul>
<b>Exceptions</b>	<ul style="list-style-type: none"><li>• System cannot get registration application from user</li></ul>

### 4.2.2 Login & Logout

<b>Use Case</b>	Login & Logout
<b>Primary Actor</b>	User,Employee,Admin
<b>Goal</b>	Enable user,employee, admin access to the system through website And finally logout
<b>Precondition</b>	All type of users has a valid username and password
<b>Trigger</b>	Access this website
<b>Scenario</b>	The user enters his/her username and password in the returning user setio of the “ Sign in “ screen.
<b>Exceptions</b>	Display login error message.

### 4.2.3 Reset password

<b>Use Case</b>	Login & Logout
<b>Primary Actor</b>	User,Employee,Admin
<b>Goal</b>	Enable user,employee, admin access to the system through website And finally logout
<b>Precondition</b>	All type of users has a valid username and password
<b>Trigger</b>	Access this website
<b>Scenario</b>	The user enters his/her username and password in the returning user setio of the “ Sign in “ screen.
<b>Exceptions</b>	Display login error message.

### 4.2.4 Play song with details

<b>Use Case</b>	Play song with details
<b>Primary Actor</b>	User
<b>Goal</b>	Played song successfully
<b>Precondition</b>	user must have a account.
<b>Trigger</b>	Played song
<b>Scenario</b>	<ul style="list-style-type: none"><li>• User must have a account</li><li>• Played song successfully</li></ul>
<b>Exceptions</b>	Can't listen song because of “@Login_required”

#### 4.2.5 Filter based search song

<b>Use Case</b>	Filter based search song
<b>Primary Actor</b>	User
<b>Goal</b>	search song successfully
<b>Precondition</b>	user must have a account.
<b>Trigger</b>	Search song
<b>Scenario</b>	<ul style="list-style-type: none"><li>• User must have a account</li><li>• Search song based of “song name”, “singer name”, “album name”</li></ul>
<b>Exceptions</b>	Input wrong details

#### 4.2.6 Free Membership

<b>Use Case</b>	Free membership
<b>Primary Actor</b>	User
<b>Goal</b>	Create account successfully with “free membership”
<b>Precondition</b>	user must have an account.
<b>Trigger</b>	Create account
<b>Scenario</b>	<ul style="list-style-type: none"><li>• User must have a account</li><li>• Then this account count to be an Free Account</li><li>• User can listen limited song</li><li>• User can’t download songs.</li></ul>
<b>Exceptions</b>	N/A

#### 4.2.7 Make payment with paid membership

<b>Use Case</b>	Paid membership
<b>Primary Actor</b>	User
<b>Goal</b>	User buy paid membership
<b>Precondition</b>	user must have an free type account.
<b>Trigger</b>	Buy membership
<b>Scenario</b>	<ul style="list-style-type: none"><li>• User must have a account</li><li>• Then this account count to be an Free Account</li><li>• User buy monthly/yearly membership</li><li>• User can listen unlimited song</li><li>• User can download unlimited song</li></ul>
<b>Exceptions</b>	N/A

#### 4.2.8 Add songs to favourite

<b>Use Case</b>	Add songs to favourite
<b>Primary Actor</b>	User
<b>Goal</b>	User add songs to favourite list
<b>Precondition</b>	user must have an account.
<b>Trigger</b>	Add songs to favourite
<b>Scenario</b>	<ul style="list-style-type: none"><li>• User must have a account</li><li>• Then they add songs to favourite</li></ul>
<b>Exceptions</b>	User wants to add songs to favourite without login

#### 4.2.9 Find recent played song/History

<b>Use Case</b>	Find recent played song / [Song History]
<b>Primary Actor</b>	User
<b>Goal</b>	User can see their song history
<b>Precondition</b>	user must have an account.
<b>Trigger</b>	Go to song history
<b>Scenario</b>	<ul style="list-style-type: none"><li>• User must have a account</li><li>• Then user can see their song history</li></ul>
<b>Exceptions</b>	User wants to see their songs history without login

#### 4.2.10 update/add song to system

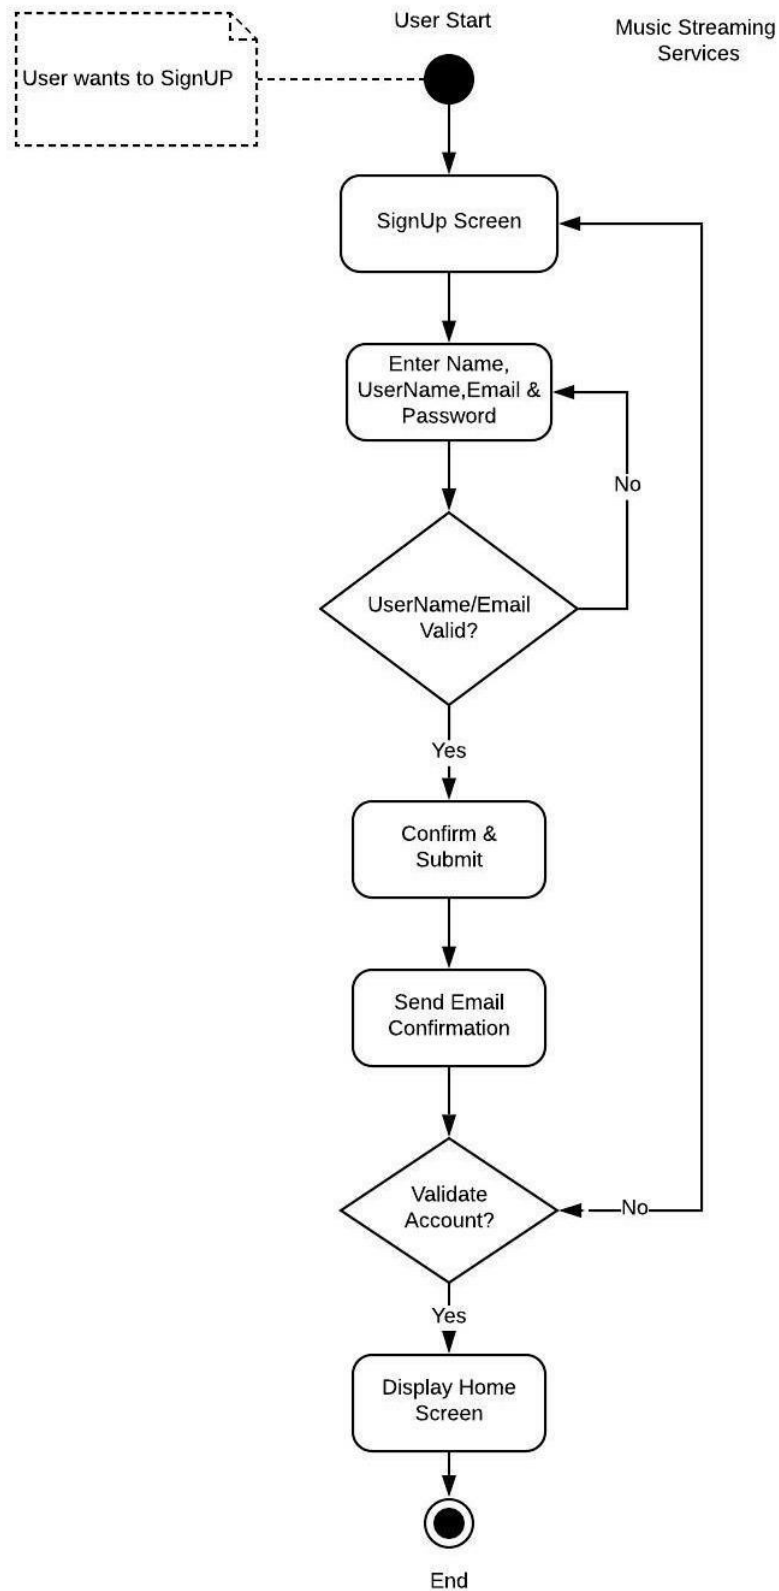

<b>Use Case</b>	update/add song to system
<b>Primary Actor</b>	Employee
<b>Goal</b>	Employee add songs to system
<b>Precondition</b>	employees must have an account given by admin
<b>Trigger</b>	Add songs to system
<b>Scenario</b>	<ul style="list-style-type: none"><li>• Employees must have a account</li><li>• Then they can add songs to database</li></ul>
<b>Exceptions</b>	N/A

#### 4.2.11 Add employee

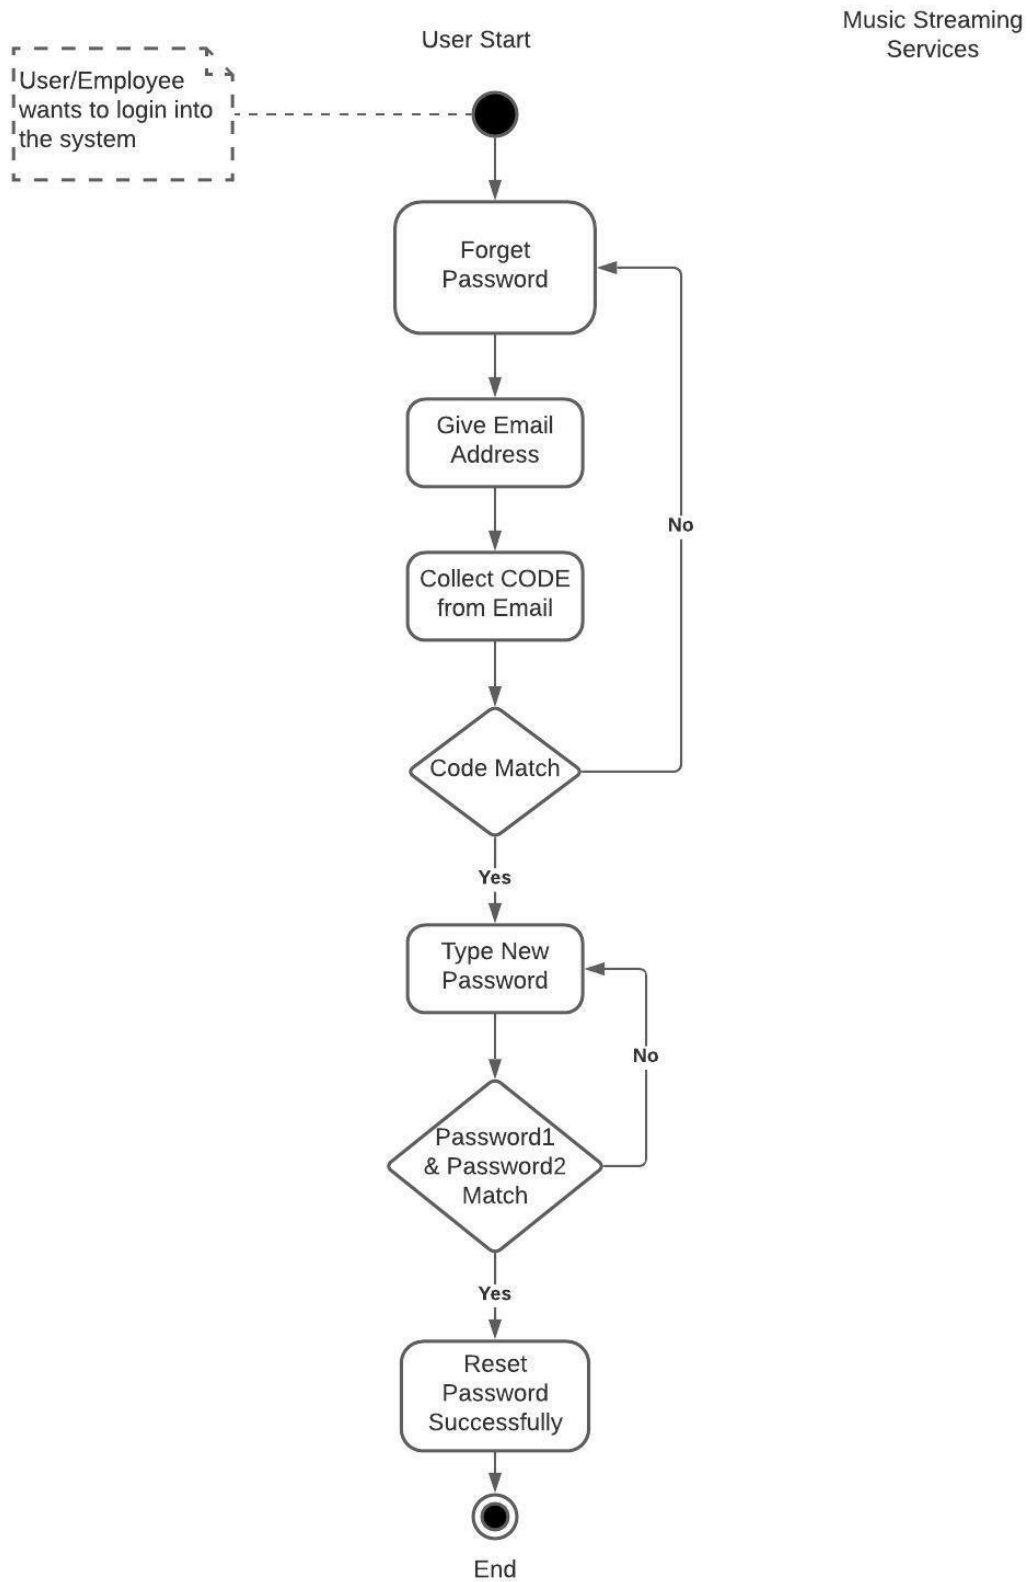

<b>Use Case</b>	Add employee
<b>Primary Actor</b>	Admin
<b>Goal</b>	Admin add employee in system admin panel
<b>Precondition</b>	Actor must be a admin
<b>Trigger</b>	Add employee in admin panel
<b>Scenario</b>	<ul style="list-style-type: none"><li>• Admin add employee to system</li></ul>
<b>Exceptions</b>	N/A

## 4.5 Class Diagram

Class Diagram for  
Django framework

## 4.6 Entity Relationship Diagram

## **4.7 Development Tools and Technology**

### **4.7.1 User Interface Technology**

- HTML
- CSS
- Bootstrap-4
- JavaScript,Font-Awesome
- JQuery
- Stripe-API

### **4.7.2 Implementation Tools and Platforms**

- Django Framework (Python) [ for backend ]
- PostgreSQL [ Database ]
- Windows CMD [ Terminal1 ]
- Git-Bash [ Terminal 2 ]
- Visual Studio Code+Atom [ IDE ]

## **4.8 Technologies Involved**

This project is created by using a variety of technologies.

HTML is a markup language that is used to produce electronic documents (called pages) that are displayed on the Internet.

I use Bootstrap in my project because it is flexible and easy to work with.

Styles are added to the page using CSS3.

Javascript and jQuery (a javascript framework) are used for having validations using regular expressions and to add interactivity to the webpage.

For Backend I use the Django web framework, Django framework is based on the Model-View-Template (MVT) architecture.

For payment methods, I use Stripe API.

In the database, I use PostgreSQL, which is a free and open-source relational database management system.

## CHAPTER 5

### SYSTEM TESTING

#### 5.1 Testing Strategy

A test strategy is an outline that describes the testing approach of the software development cycle. The purpose of a test strategy is to provide a rational deduction from organizational, high-level objectives to actual test activities to meet those objectives from a quality assurance perspective.

#### 5.2 Test Case Table

##### 5.2.1 Test Case 1 (Login)

Test Case - 01	Test Case Name:Login
System : User Login	Subsystem: N/A
Designed By: Arif Hossain	Design Date: 1-8-2021
Execute By:Arif Hossain	Execution Date:5-10-2021

Step	Action	Expected System response	Pass/Fail	Comment
1	When system user fills up the user login field and click login button	If user don't enter email id /username then show "required"	Pass	Email/username field are required
2	When user enters email like abc@gmail.com	The system shows this fields is email required.	Pass	The valid email needs to login

### 5.2.2 Test Case 2 (Search song)

Test Case - 02	Test Case Name:Search song
System : Search song	Subsystem: N/A
Designed By:Arif Hossain	Design Date: 7-8-2021
Execute By:Arif Hossain	Execution Date:8-9-2021

Step	Action	Expected System response	Pass/Fail	Comment
1	When someone enter song name and click search product	If song name nearby match then the website show song.	Pass	Song name required
2	When user enters song name	The system shows song.	Pass	User can search song without account

### 5.2.3 Test Case 3( Make Payment )

Test Case - 03	Test Case Name: Make Payment
System : Payment	Subsystem: N/a
Designed By:Arif Hossain	Design Date: 10-10-2021
Execute By:Arif Hossain	Execution Date:28-10-2021

Step	Action	Expected System response	Pass/Fail	Comment
1	User give credit card information	If user give wrong credit card information then this system shows error	pass	Need valid card
2	When user enters like “ 5373 c cc n883 ”	This system shows wrong credit card	pass	N/A

### 5.3 Pass / Criteria

Pass or fail criteria will be set by the test engineers. They will prepare the pass / fail criteria on the basis of which input data are worked and which do not work well. Those data that are worked well will be considered as pass criteria. And rest of the input data will be considered as fail criteria.

Now we will give the pass / fail criteria below:

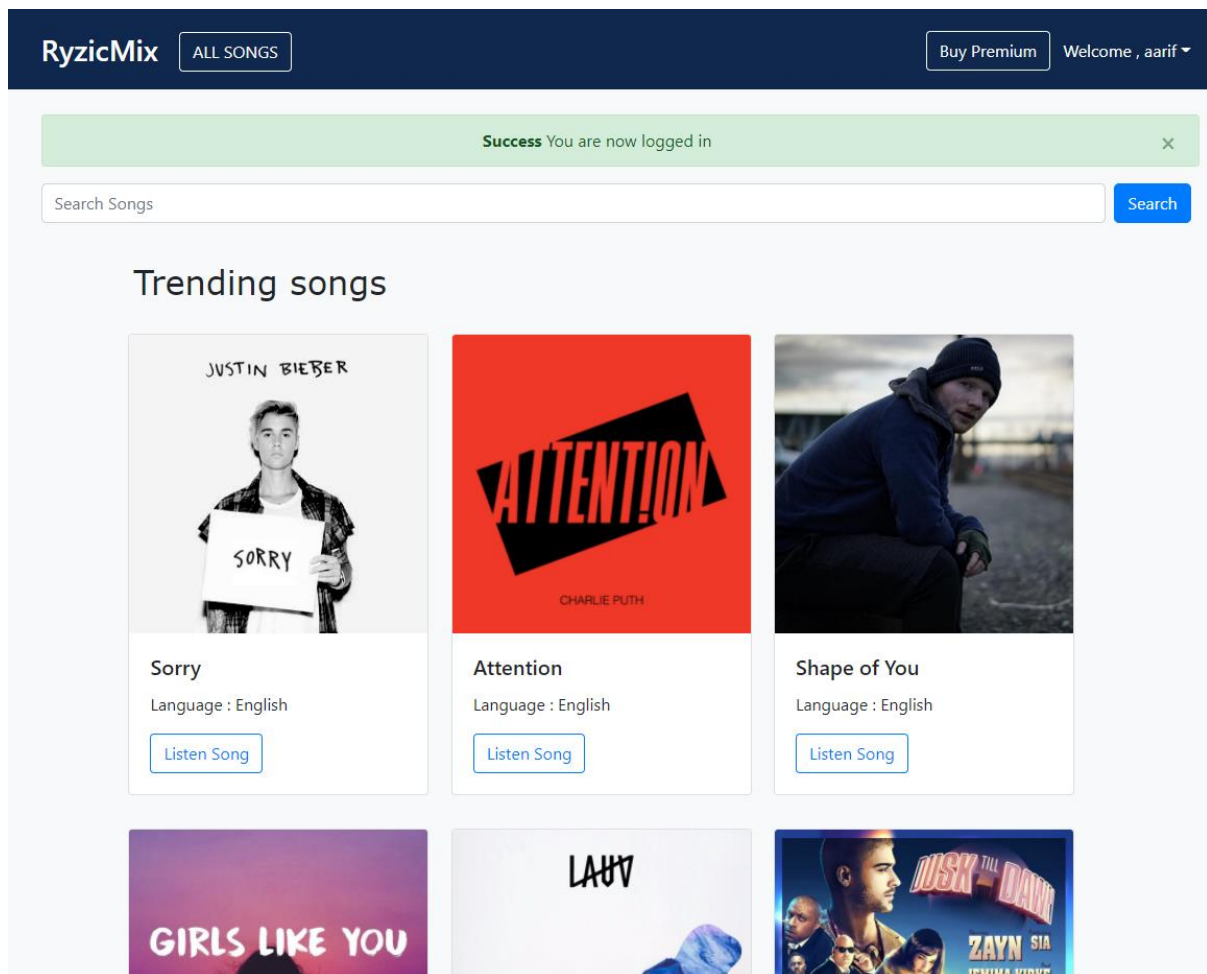

- System crash will not be considered as a pass case
- If any criteria pass 100% times, then it will be considered as pass criteria only
- If data can't be displayed to the application properly, then it is also to be considered as fail criteria.

## **CHAPTER 7**

### **PROJECT SUMMARY**

#### **7.1 LIMITATIONS**

- The main limitation is system cannot handle million data and signals at time.
- There is no registration system included in this application for recruiters; recruiters have to view the talents profile without registration.

#### **7.2 ACHIEVEMENT**

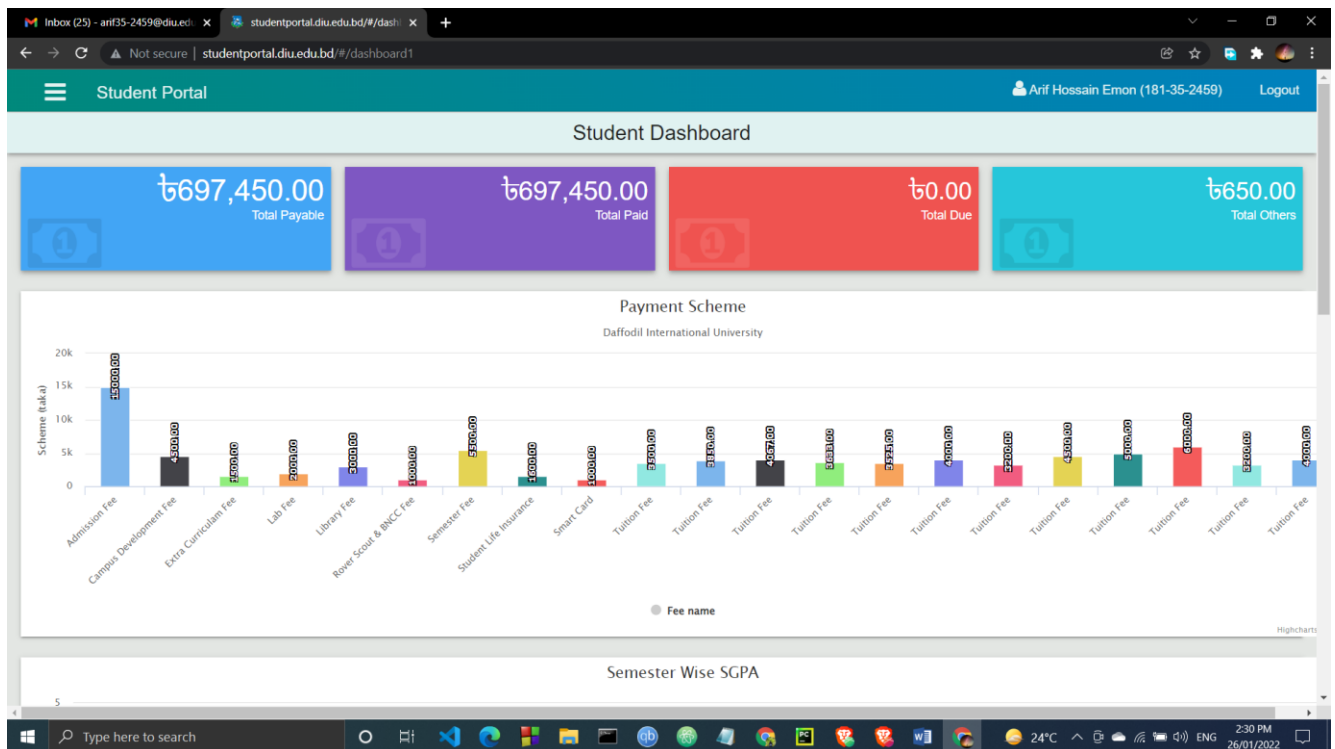

- Successfully built a project.
- Learned a new technology.
- Deploying a project is a new experience.
- Learned the real-life experience by uploading a project on the live server.
- Know about documents and the development process.

#### **7.3 FUTURE WORK**

Though the system was developed as much as needed and its work properly. But I have to add some new features to make the system fulfil. The future work will include some major changes, such as-

- Release mobile version
- Add playlist
- Add Extra features
- Looking for a music streaming service that has a huge range of songs

## 7.4 Account Clearance

## 7.5 Plagiarism Report
