APPROVAL

This Project titled “**ONLINE BOOK STORE MANAGEMENT SYSTEM**”, submitted by **Afia Afroj Ifti, Farhana Akhter** and **Nishat Salam Nisa** to the Department of Computer Science and Engineering, Daffodil International University, has been accepted as satisfactory for the partial fulfillment of the requirements for the degree of B.Sc. in Computer Science and Engineering and approved as to its style and contents. The presentation has been held on 02-12-2022.

BOARD OF EXAMINERS

DECLARATION

We hereby declare that, this thesis base project has been done by us under the supervision of **Mr. Abdus Sattar, Assistant Professor of CSE Department**, Daffodil International University. We also declare that neither this project nor any part of this project has been submitted elsewhere for award of any degree or diploma.

ACKNOWLEDGEMENT

First we express our heartiest thanks and gratefulness to almighty God for His divine blessing makes us possible to complete the final year project/internship successfully.

We really grateful and wish our profound our indebtedness to **Mr. Abdus Sattar**, Assistant Professor of CSE Department, Daffodil International University. Deep Knowledge & keen interest of our supervisor in the field of “**Online Book Store Management System**” to carry out this project. Our project is based on “Web Development” His endless patience, scholarly guidance, continual encouragement, constant and energetic supervision, constructive criticism, valuable advice, reading many inferior draft and correcting them at all stage have made it possible to complete this project.

We would like to express our heartiest gratitude to **Prof. Dr. Touhid Bhuiyan** and Head, Department of CSE, for his kind help to finish our project and also to other faculty member and the staff of CSE department of Daffodil International University.

We would like to thank our entire course mate in Daffodil International University, who took part in this discuss while completing the course work.

Finally, we must acknowledge with due respect the constant support and patients of our parents.

Abstract

In both developing and developed countries parents and students both are worried about buying books because nowadays they have much not time to find or buy books. All types of books are not available all library. So, this is very annoying. Now digital media and interfacing with new technologies is a part of day-to-day life for all people. That's why we want to develop an website which give more relaxation about students life and also working people. In this software projects, a central database containing various books in stock along with their title, author and cost. User can view the books according to category. This system also allows the users to plays orders for the books. We will also add the feature where user also can sell post their unused books. So, it will very helpful all those people who want old books or those books which are not easily available in market. And this will take a very short time. From this website, people can order book from anywhere at any time. It will play an important role for all book lover. We hope this software project helps of all people who are busy for their work.

CHAPTER 1

INTRODUCTION

1.0 Introduction

An online bookstore is a projects that acts as a central database containing various books and allows users to search and purchase books with their title, author and cost. This project is a website that performs as a central book store. This project is developed by using asp.net as the front end and sql as a back-end. When a user visit the website can see a huge amount of books arranged in so many categories. Users may select book and immediately the system will show the price. And they can purchase books without going outside. But for the transaction users have to give some other details and confirmation. Admins are for update, delete or add books with details, cost and process the orders for delivery.

The software has three main components: -

1. Execute on new user to register and login.
2. Implement user to choose any book.
3. Implement the user to buy books.

1.1 Motivation

Now-a-days people are extremely busy with their work. They have little time but a lots of work to do. For this reason they haven't enough time to go to stores, dealing with crowds and wasting time. So now the easiest way is shopping in online without going stores. And now books are also in online shop. There are many online book stores, but these are not very easy to everyone to use it comfortably. So we decide to make a user friendly website to create an online book store. which will allow users to use more efficiently and more comfortably. With this website users can search and purchase a book online based on title

author and category. And they can order their desired books through online. Transaction system is credit card payment and cash on delivery. Using this website the user can buy a book online rather going out to a book store and wasting time.

1.2 Rationale of the study

In this era, the ease of placing an order at the click of a button has led to a sudden increase in online shopping similarly in online bookstore. This time saving experience is also a hassle-free task. The various categories of this online bookstore, makes it more user friendly. Users can easily navigate and choose what they are looking for. It allows users to buy books anytime of the day or night while relaxing at home or any other situation. New arrival and best seller categories will help users to choose which book are in trend. So users easily can get the right choices and purchase undoubtedly. Meanwhile admin acknowledge the customer's preferences.

- An admin can easily upload the book details through the website.
- User can easily find many books and can select their own choices and purchase through any kind of payment method.
- Develop a user friendly online book store.
- Using this website, the user can purchase a book online instead of going out to a shop and wasting time.

1.3 Objectives

In the project, we propose to build an online bookstore for the people. The bookstore will contain fiction, stories, biography, literature, study material, any courses books like computer and be available to everyone. In our developing country many students find textbooks too expensive to purchase at school bookstores or local stores and many courses use the required textbooks for a few days in a semester. This becomes very wasteful and

spoil for students. This website provides a solution to this. It will provide a service in which students can buy books online without any trouble. There will be free shipping. They just do need to register with the site in order to books. The information of payment will be requested after adding any numbers of books in the cart.

1.4 Expected Outcome

- Without actually going outside, customers can get their books delivered and buying the required books. They can make payment online itself.
- The managing system of the store for shopkeeper becomes easier as customers are not visiting while ordering online.
- This system saves both time and passage-money of customers. Also saves shopkeepers convenience cost.
- User can get to perceive different kinds of books that they were unaware of by just searching in the system using keywords.

1.5 Overall Description

The project designed as an online bookstore that provides a web-based interface. It is the graphical user interface. It has a section for user to input query information to search the database. Then the users interface pass the input to the control function, that is implemented in Php. The control function is developed to process the input from the user's interface, generate the searching query and then gets data from the database and returns to the users interface. This control functions also have bridges to search some external real online bookstores. It can also generate the query from the user input and pass them to the commercial bookstore. The bridge can also handle the feedback from the commercial bookstore and parse the convenient information and display to the user in HTML forms.

1.6 Report Layout

Chapter 2, here we discuss the background of our project. We also add information about the allied work, the opportunity and challenges of the project and we are compared too many other applicant systems.

Chapter 3, here we give the engrossments of the project. We defined the different diagram and design requirements. We also discussed about the features.

Chapter 4, we present experiment result of our project and also specified front page of this project.

Chapter 5, we implemented and testing our project and we discuss about that.

Chapter 6, discussed about conclusion and the scope for further development of the project.

CHAPTER 2

BACKGROUND

2.0 Introduction

Increasing usage of smart phones, tabs and laptops. Because of that web movement rates also increased day by day. To make our life easier, web application is used to serve us and they also do create many different applications. The online book-store is a form of e-commerce and book sales industry in one form, it has many advantages such as transaction activities can be anytime, anywhere, anytime, shortening the time of book selection, improve service efficiency. That will more interactive for people from buy it. Day by day they will know the application of this website and they will be used for it. In this chapter we try to give the overall idea of our web application “Online book-store”.

2.1 Related Works

Rokomari:

Figure 2.1: Rokomari

This website has many different category and each category contain their own types of all books. It is inspire to buy books. . This website sorted by price low to high, high to low. So, from this it will be very easy to find books. This website has filter from where people can show categories.

BdeBooks:

Figure2.2: BDeBooks

This website also designed with many categories. It can be searched through first alphabet only. This website offers online free reading Bengali books. Any book can download from this website. So, this website attracted people to read book in smart devices only.

Boi Bajar:

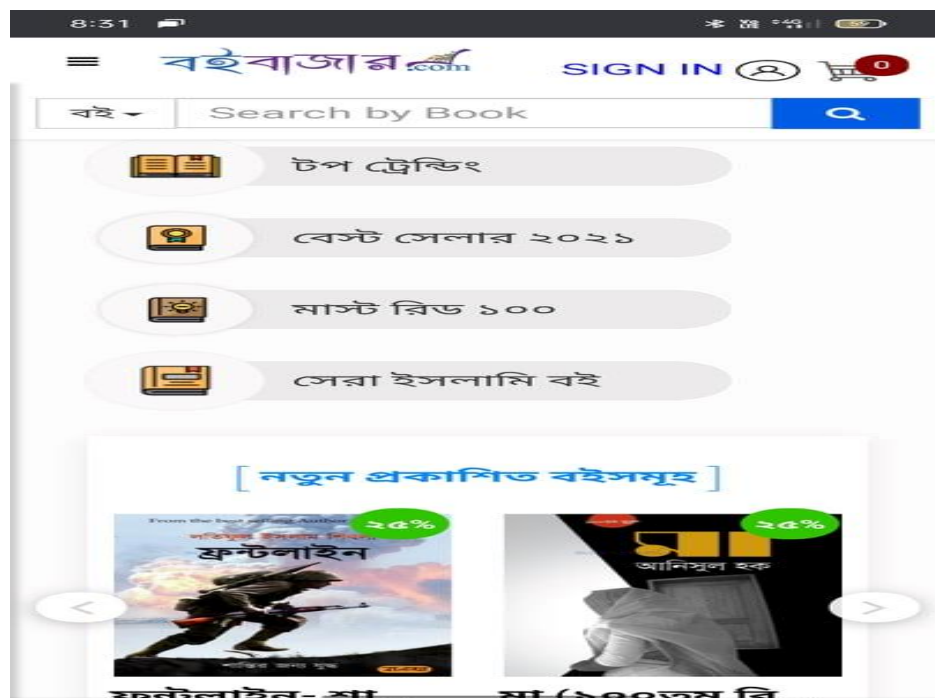

Figure 2.3: Boi Bajar

This website has designed with book and author's category. it can be searched by book name or author name. It is best for those customer those who want the books by authors name.

Boi Ghar:

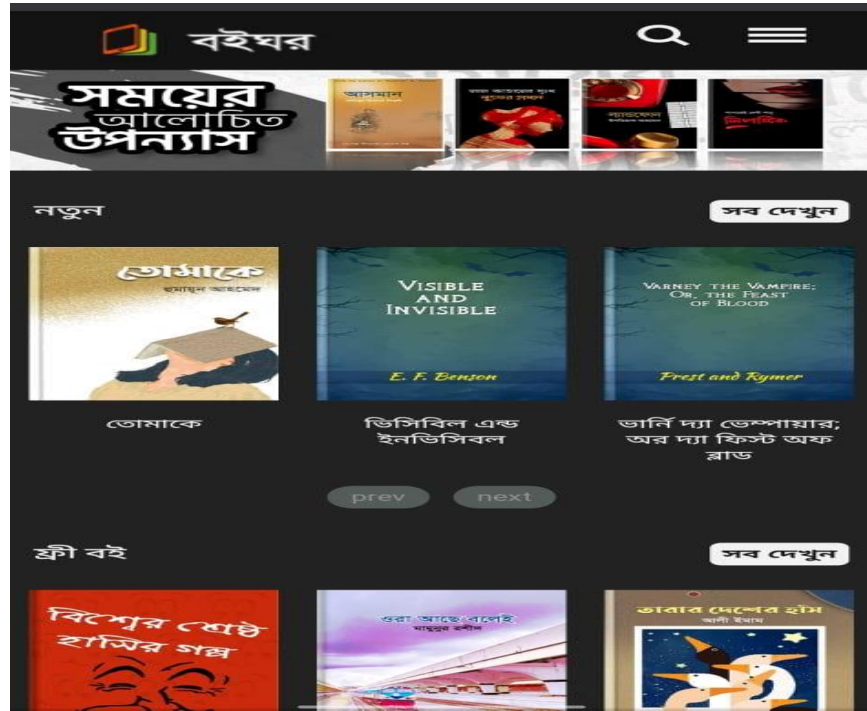

Figure 2.4: BoiGhar

This website offers dashboard where all category books are shown with its own type

Boichoi:

This website has designed by book names. It has dashboard with books part

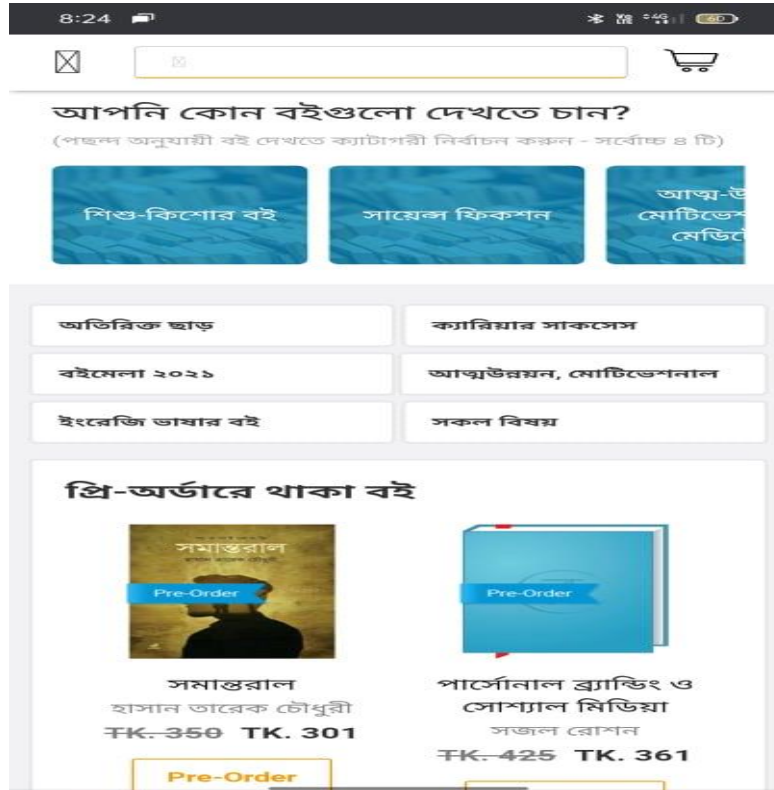

Figure 2.5: Boichoi

This website has designed by book names. It has dashboard with books part

Boi Khata:

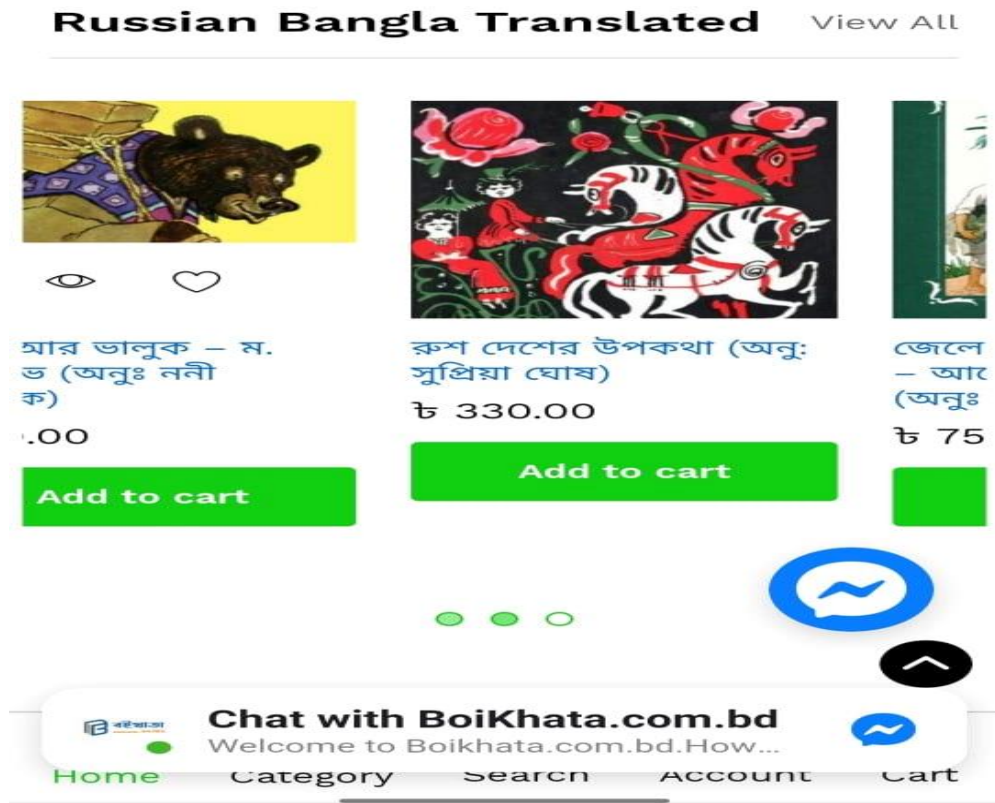

Figure 2.6: Boi Khata

This website has given Bangla translated book in all languages

Boi Bichitra:

This website dashboard is well designed. For this reason, customer has find books very easily. Their website is very attractive for people.

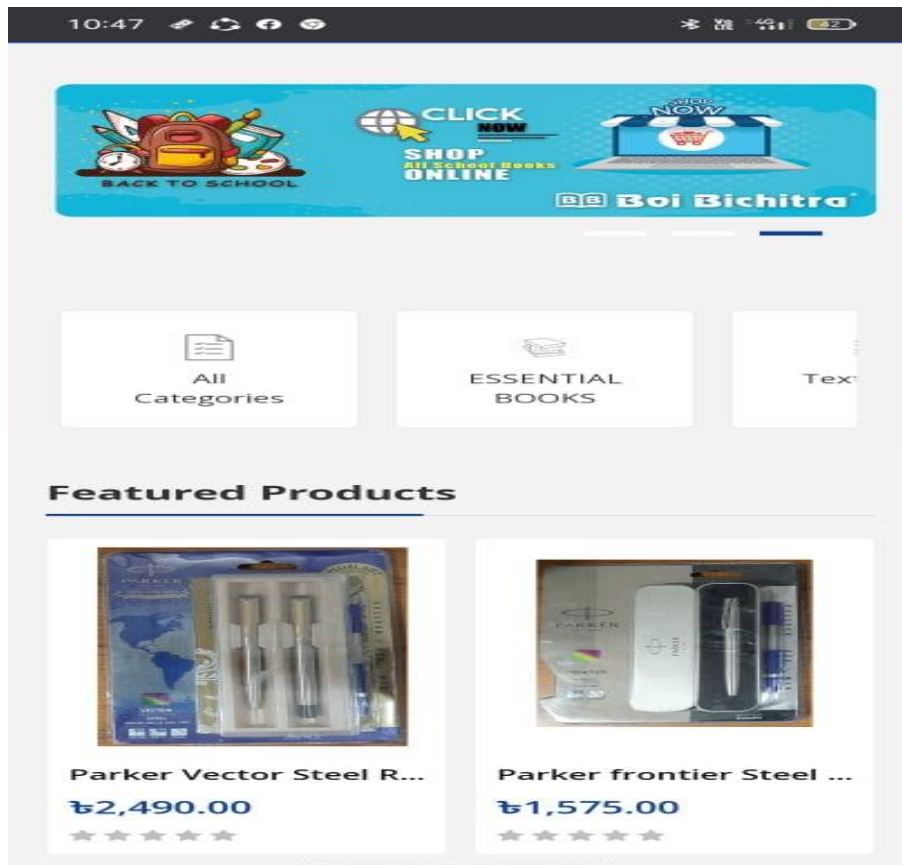

Figure 2.7: Boi Bichitra

Eboi Ghar:

This website dashboard is category wise. When selected one category it gives all books of this category.

Figure 2.8: Eboi ghar

Boi Poka:

This website has given publishers and author's section. Those people want publishers book they will easily find out.

Figure 2.9: Boi Poka

2.2 Research Summary

As a user, they can easily find any kinds of books what they want. In our country, people are used to buy books from existing library where many times were wasted. In this app, user can log –in, choosing book any time. Here users have the option of choosing many books. Through this application, users can save their time. So, books will increase the demand for the edge. This research will helpful book lovers people and attracted people to buy books.

2.3 Scope of the problem

Different website is designed or featured very different way. Scope of problem are given below

- Some website doesn't add old book category.
- Few applications has no searching option.
- Don't have right to sell user.
- Add different categories section
- The categories are beautifully divided.
- User can also sell books in old category.

2.4 Challenges

- Developing any project, we have to face some challenges. Similarly, in this project we face some accusations. At first, we are trying to think out this application with user encouragement resource so we have to complete this application with full fill of user's indictments. The challenges requirements which we mentioned below.
- There are different section of old categories where only old books are added.
- User can also sell their old books which they no longer need.
- User can find book very easily.
- User can create account without paying any money.
- Once user log in the data log in data will be saved.

CHAPTER 3

REQUIREMENT SPECIFICATION

3.0 Requirement Collection and Analysis

This website application is for any kind of smart phone, laptop, tab user. For smooth work this application requires very simple configuration.

Hardware configuration required:

Smartphone, laptop, tab both user and admin

Software configuration required:

- Os: Windows
- DB: My Sql
- Server: Xampp

It also provides the following requirements that is required:

- Data accuracy
- Efficiency of working
- Real time location data show
- User friendly
- Effective

3.1 Features:

User panel

- Create account
- New category
- Old category
- Searching option
- Payment method
- Add to cart

Admin panel

- Dashboard
- Add category
- Add books
- Orders method
- Monthly payment summary

3.2 Entity Relationship Diagram and Description

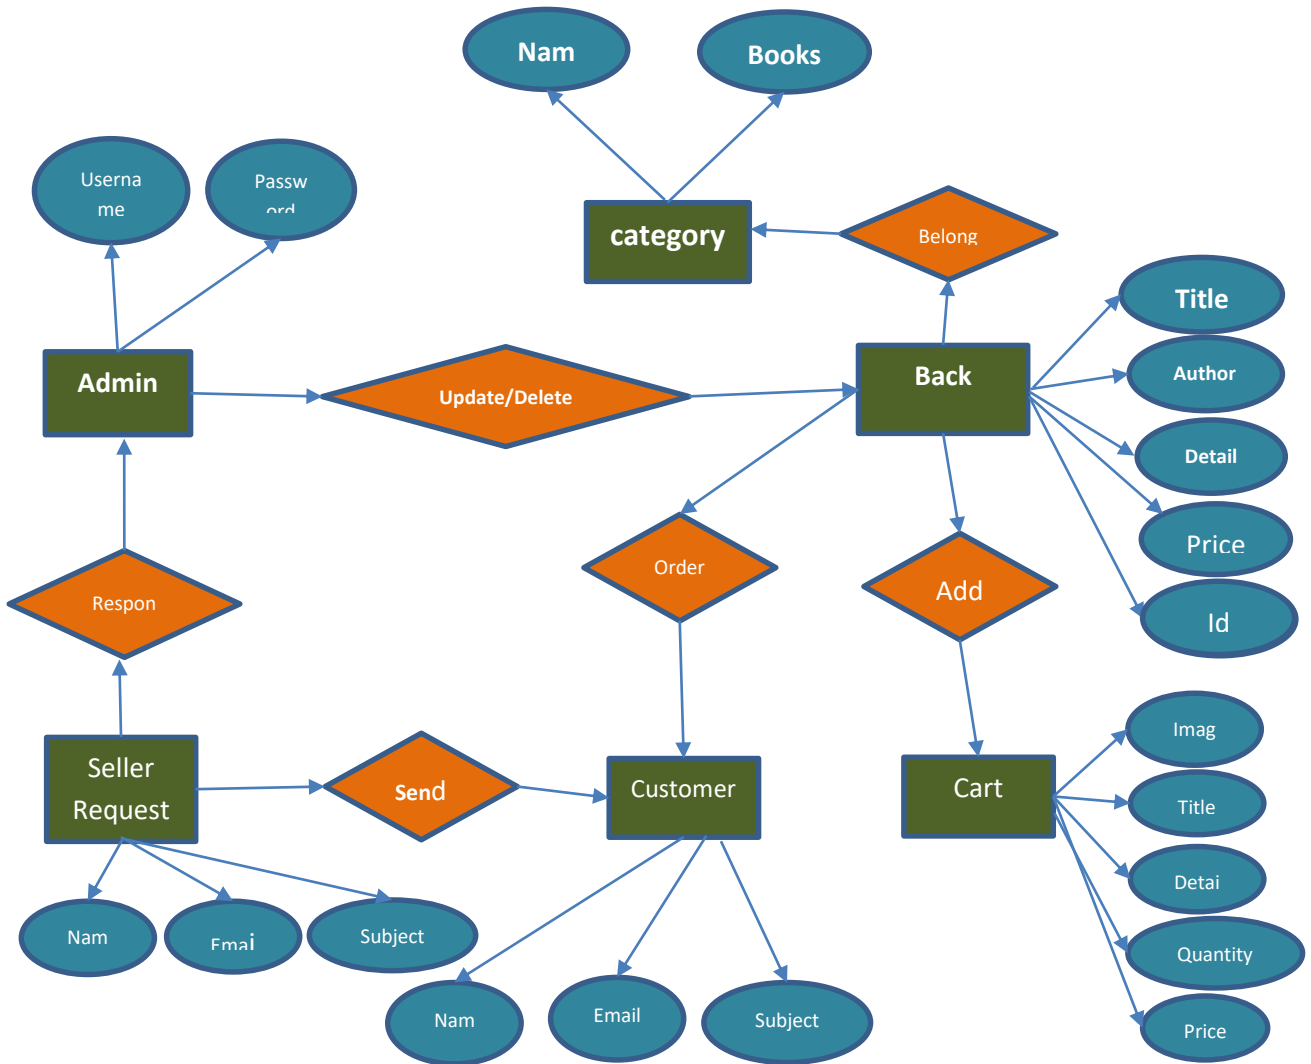

Figure 3.1: Entity Diagram

In our project, two entities are working in the total application which is user. The user opens the website and goes to home. There, the user logs in the software and views or buys books. When the user buys books, a message will go to the admin, then the admin confirms the orders.

CHAPTER 4

DESIGN SPECIFICATION

4.0 Introduction

Ever since online shopping immersed the internet and now it is in a trend. Even ardent book readers are looking for online bookstores to shop for their interest because shopping books over the online store is much convenient than browsing bookshelves in a library or a traditional bookstore. The main reason for shopping books through online is convenient is because it is easier to search by name or author or category and also it saves time, energy and money. So we designed a user friendly online bookstore website to buy books at any time and from anywhere. And we developed it with more features to make it more convenient for the users.

4.1 User Panel

Home Page

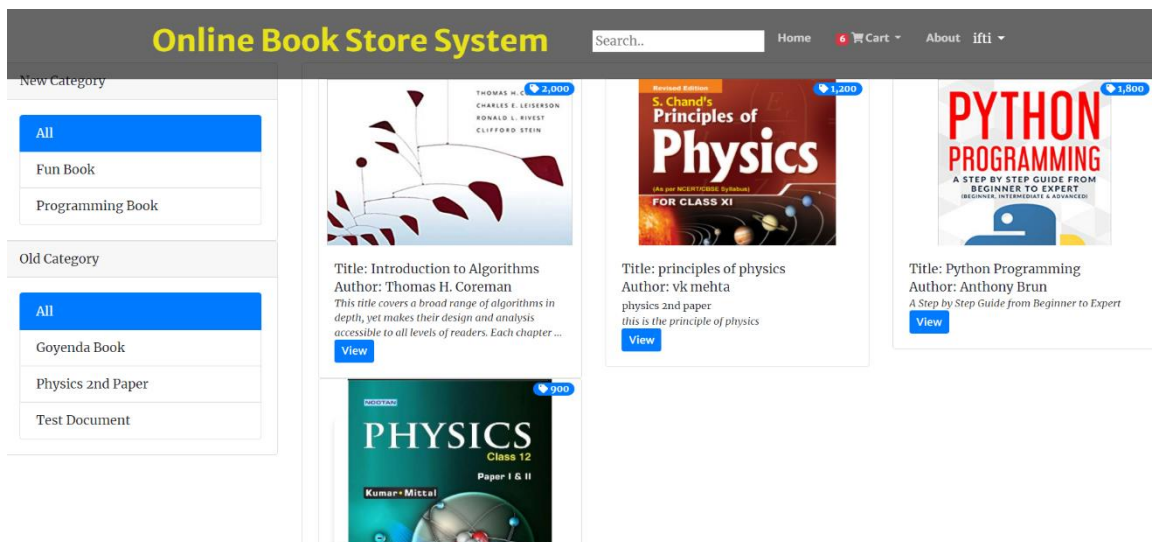

Figure 4.1: Home page

After login to the website our home page will be showed and it is presenting menu bar or options of this application. There is a search option to search books by author name , price range, book name. User also search by category that are visible in the menu. Some books are also viewed in this page for readers, view details option is here for the details of the book. And there is also cart, about and user's account option is here.

New categories:

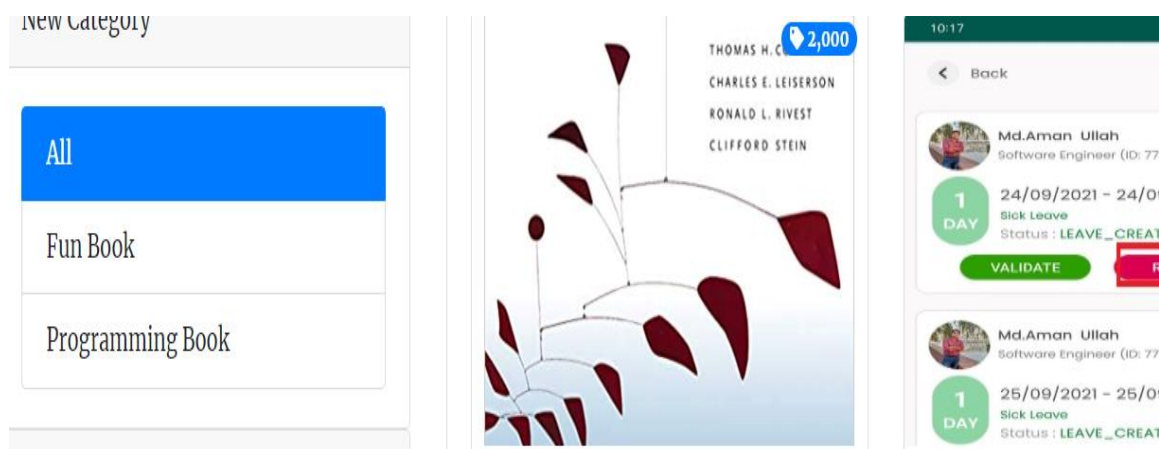

Figure 4.2: New category

This features has many different category and each category contain their own types of all new books. From this features users can very helpful to find their own book choices. Sometimes some of users has confused which type of books they bought but from these features user can easily choose their books by selecting categories and finding their books with in short time.

Old categories:

This features also has many different category and each category contain their own types of old book. In this feature all books are used/old books. Some user finds too many old books. So, this categories are helped these users to find old books very easily.

Log in:

Figure 4.15: system settings

In this option admin can edit system of the website.

4.3 Descriptive Analysis

In this web application, books can be find and also buy books very easily. In the first, user have to login then they can see a dashboard where new category and old category books. They have select category and then select category section. Then each section view their contain books. They also can view every book details and they have an option to add cart books. From add cart they can increased or delete books and for this they can easily buy books by clicking payment option. In payment option, user can select cash on delivery or mobile banking. Then a message will go the admin and admin can see the orders and by press confirmed he approved the orders. Also admin can add category by given name and description. Admin can also add users to sell their books. Admin has also sells report which if he want then print out this.

CHAPTER 5

IMPLEMENTATION AND TESTING

5.0 Requirements for Implementation

To implement our project we need some necessary requirements. Without those things we cannot run our project to reach our desired goal. Implementation process will start after fill up the requirements, which is mentioned below:

- Online connection
- Computer or android or iOS device

If this application is implemented then everyone who ardent readers or learners will be benefitted with it. As it is designed as user-friendly and have some useful features that users can comfortably use this application.

5.1 Testing Implementation

This is the process that can examine as in where an application tester or it can be the builder of that application will be able to check many cases for the execution of the application and specification. But maybe there have some obstacle in the application at the initial stage or in next.

Table Name: Testing table

Test Case	Test Input	Expected Outcome	Obtained Outcome	Passed/Failed	Testing Period
Browsing website	By valid laptop	Successfully Opened	Successfully Opened	Passed	13-10-2021
Browsing website	By Invalid Laptop	Re-enter warning for failure	Open denied	Failed	13-10-2021
Browsing website	Installed with empty field	Re-enter warning for failure	Open denied	Failed	13-10-2021
Browsing website	Installed by valid Laptop	Successfully Opened	Successfully Opened	Passed	10-11-2021

Figure 5.1: Testing Table

CHAPTER 6

CONCLUSION & FUTURE SCOPE

6.0 Discussion and Conclusion

Eventually our project has been completed. This project is made for both who buy books regularly or occasionally, both will be benefitted from this. And also for them who want to sale their old books to create place for the new books. And it will give an amazing user experience for the new or early user.

6.1 Future Work and Further Development

We have plans to adding more facilities to this application. This system has a lot of future scope to make it more users friendly. Firstly, we will add more feature for them. We will add payment gate method. Now this project has designed for website only. There are plans to make it a mobile app in the future. We also thought about making android and ios app in future. For this reason, it will be convenient to use more for user.
