

**MOBILE BASED EDUCATIONAL APPLICATIONS IN
BANGLADESH**

BY

**NOURIN AHMED
ID: 171-25-582**

This Report Presented in Partial Fulfillment of the Requirements for the
Degree of Master of Science in Computer Science and
Engineering

Supervised By

Dr. Sheak Rashed Haider Noori
Associate Professor
Department of CSE
Daffodil International University

DAFFODIL INTERNATIONAL UNIVERSITY

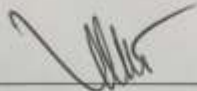

DHAKA, BANGLADESH

MAY 2018

APPROVAL

This Thesis titled “**Mobile Based Educational Applications in Bangladesh**”, submitted by Nourin Ahmed to the Department of Computer Science and Engineering, Daffodil International University, has been accepted as satisfactory for the partial fulfillment of the requirements for the degree of M.Sc. in Computer Science and Engineering and approved as to its style and contents. The presentation has been held on 7th May 2018.

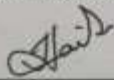

BOARD OF EXAMINERS

Dr. Syed Akhter Hossain
Professor and Head

Department of Computer Science and Engineering
Faculty of Science & Information Technology
Daffodil International University

Chairman

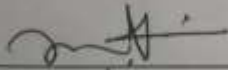

Dr. Sheak Rashed Haider Noori
Associate Professor and Associate Head
Department of Computer Science and Engineering
Faculty of Science & Information Technology

Jahangirnagar University

External Examiner

DECLARATION

I hereby declare that, this thesis has been done by me under the supervision of **Dr. Sheak Rashed Haider Noori**, Associate Professor, Department of CSE Daffodil International University. I also declare that neither this thesis nor any part of this thesis has been submitted elsewhere for award of any degree or diploma.

Supervised by:

Dr. Sheak Rashed Haider Noori
Associate Professor
Department of CSE
Daffodil International University

Submitted by:

Daffodil International University

ACKNOWLEDGEMENT

First I express my heartiest thanks and gratefulness to almighty Allah for His divine blessing makes us possible to complete this project successfully.

I fell grateful to and wish our profound our indebtedness to **Dr. Sheak Rashed Haider Noori, Associate Professor**, Department of CSE Daffodil International University, Dhaka. Deep Knowledge & keen interest of my supervisor in the field of mobile application influenced me to carry out this thesis .His endless patience ,scholarly guidance ,continual encouragement, constant and energetic supervision, constructive criticism , valuable advice ,reading many inferior draft and correcting them at all stage have made it possible to complete this thesis.

I would like to express my heartiest gratitude to **Prof. Dr. Syed Akhter Hossain**, Head, Department of Computer Science and Engineering, for his kind help to finish my thesis and also to other faculty member and the staff of CSE department of Daffodil International University.

I would like to thank my entire course mate in Daffodil International University, who took part in this discuss while completing the course work.

Finally, I must acknowledge with due respect the constant support and patients of our parents.

ABSTRACT

This thesis is on “**Mobile Based Educational Applications in Bangladesh**”. Using mobile devices, to enable new ways of learning has been a big area of interest in research for quite some time. Mobile devices provide the opportunity to move freely. The increased amount of mobile devices and advancement in mobile technologies has brought these new learning applications into the reality.

Mobile applications are software which are developed for using on mobile devices and made available through application stores. Mobile applications have been developed in the online stores and application stores have become highly competitive online places. This research reports the current status of the educational environment of Bangladesh through mobile application online.

The research was done primarily through online research. The statistics of the comparison of the availability of the educational applications for different sectors are presented in this thesis. This thesis helps user to find the appropriate sectors for their expected required application in time and also get to know the status of their expected applications in the online application store.

Also the findings of this research will be useful for Bangladeshi developer to understand which educational sector they need to develop or which sector is still undeveloped or less developed in which ways in Bangladesh.

Chapter 1: Introduction

1.1 Introduction

The learning process changes over time, much like the lifestyle and the terms and qualifications of employment do. The learning process welcomes more reinforcing components, which contribute to the development of information, communication and interactive environment. For example, the rapid development of web technology, such as the internet, brings learning through electronic devices (E-learning) to the fore. E-learning is defined as any use of web technology to create educational activities and experiences. The potential is exciting and amazing [5].

1.2 Motivation

All the previous research on mobile education in Bangladesh mainly directs to assess the processes, usage, evaluation and challenges of mobile learning in Bangladesh [2, 3, 4]. Such a research was conducted based on health service in Bangladesh which was the main theme of motivation for this research [1]. Until now, there is no research found which is conducted directly on mobile educational applications and represents the current situation of the applications, its uses and the future development. Hence, the objective of this research is to understand the current situation of the mobile educational applications in Bangladesh. To accomplish this research objective, a long research has been conducted to analyze all the mobile educational applications that are already developed for the users of Bangladesh.

1.3 Rationale of the Study

The need of wireless and mobile devices helped e-learning, can be also considered as m-learning (Mobile learning or learning through Mobile or wireless devices) [4]. In terms of

mobile learning applications or m-learning, it means learning that is done through portable devices such as smartphones and tablets. Mobile learning is one of the most educational trends for the coming years. One of the positive features of m-learning is that there is a high availability of mobile devices worldwide as well as in Bangladesh nowadays and this trend continues to move forward.

A research that offers the knowledge for Bangladeshi developer to understand in which educational sector they need to develop or which sector is still undeveloped or less developed in which ways of mobile applications in Bangladesh. From this research, one can understand that which undeveloped sections of educational application need to be developed.

One can perceive the number of students for each sector and also get to know whether the sector is developed, less developed or still undeveloped. The statistics of the comparison of the availability of the applications for different sections are visualized here. The research objective is to direct or help any developer to get the chance to know the statistics of which sections of educational application are still undeveloped or less developed so that they can focus to develop on these sections instead of focusing the developed sections.

Current status in the field of educational applications of Bangladesh is visualized to all by this research. Users also get the chance to know about the applications developed in Bangladesh which can be used for the educational purposes. It must be beneficial for students, parents and teachers and also for them who love to seek knowledge for various purposes in life. This research helps to learn the users about their expected applications are available or not for their specific categories. It helps users to reduce the loss by searching in application store to find the applications they are expected to have with exact necessity.

1.4 Expected Output

As per objectives of this research and based on the collection of data, there should be a categorization to segregate the type of educational applications and to understand in a clear point of view. Afterwards, the availability of the applications in various categories should be displayed. Then, the quantity of the applications on each categories should be ensured. Based on the available applications, the users who are targeted for using these categorical applications should be revealed. To access these particular applications properly and definitely by the particular users, there should be dedicated factor or factors.

Chapter 2: Mobile Based Educational Application

This chapter represents the meaning and background studies that have been considered and used in order to research the mobile educational applications in Bangladesh. This chapter includes mobile education, mobile application and educational application.

2.1 Mobile Education

Mobile Education refers to the mobile learning or m-learning which allows teaching and learning within the classroom by using portable devices such as smart phones, laptops and tablet PCs having networks without wires. It gives instructors and learners increased flexibility for interactions within the classrooms.

2.1.1 Advantages of Mobile Education

There are some important advantages of mobile education. It creates flexibility by eliminating the fixed time period and a fixed place. Nowadays it takes learning flexibility even further by making instructional content such as videos, podcasts, and other multimedia formats available on smartphones or tablets, so that learners get the flexibility of being able to access this content with specific instructions and directions on their mobile devices to reduce the time they normally need.

Mobile education needs to be convenient. And technology makes it possible for the same learning courses to be available on all types of devices that a user or learner might use or interact with on a daily basis, from PCs and laptops to tablets and smartphones.

Learners prefer learning methods without hampering their daily routines. Information must be made easy to access. Finally, a learners learning habit that supports a higher quality of performance is the only outcome to be observed.

2.2 Mobile Application

A mobile application, most commonly referred to as an app in short form. It is a type of application software which is designed to run on a mobile device, such as a smartphone or tablet computer. Mobile applications in some cases provide users with similar services to the PC users also. Mobile applications are generally small in size in terms of space and individual software units with limited function. Mobile application provides limited functionality such as a game, calculator or mobile web browsing. Many of the applications may have avoided multitasking because of the limited hardware resources of the early mobile devices.

2.2.1 Source of Mobile Application

To access any mobile application, online users must enter into one of the several platforms. There are three renowned platforms for mobile applications in Bangladesh. One is "Google Play" which is for Android applications, another one is "App Store" which is for iOS applications and the other one is "Microsoft Store" which is for Windows Mobile applications. Some other stores are also available for mobile applications such as Amazon Appstore, BlackBerry World, Samsung Apps, Opera Mobile Store etc. "Amazon Appstore" which is an alternative application store for the Android operating system. The Amazon Appstore's Android Apps can also be installed and run on BlackBerry 10 devices. "BlackBerry World" is the application store which is for BlackBerry 10 and BlackBerry OS devices. "Samsung Apps" which offers apps for Windows Mobile, Android and Bada platforms. "Opera Mobile Store" is a platform independent app store for iOS, Java, BlackBerry OS, Symbian, iOS, and Windows Mobile, and Android based mobile phones. There are many other independent app stores for Android devices.

2.2.2 Modes and Versions of Mobile Application

All the mobile applications can be categorized based on internet accessibility needed or not such as offline and online mobile application. Mobile applications can also be considered into two categories, which are free version and paid version.

2.2.2.1 Offline and Online Modes Mobile Application

Offline mobile applications refer to the applications having utilizable features without an internet connection. If user had to spend some time without internet due to any reason such as electricity issues, areas without network coverage, shortage of mobile data etc. and if the mobile application provides the feature of offline mode, then the user doesn't need to waste any time sitting lazily waiting for the internet connection and doesn't need to get panic in the time they are bound to use this application.

The mobile applications that is utilizable only if internet connection is available are known as online application. User can use this type of application under the internet coverage. If the internet connection unavailable for some time users are unable to do anything even if in an emergency situation.

2.2.2.2 Free and Paid Versions of Mobile Application

Free version and paid version of mobile application can be categorized by payment status that means whether user have to pay or not for getting access to this application. The applications which do not required to pay are known as free version and those application which requires money to get access are known as paid application. Most of the user prefer free version of application over paid version. Sometimes in some free versions of applications, developer created some advanced feature which is not for free of cost. To access those features, user need to pay money.

2.2.3 Benefits of Mobile Application

As we are in a digital era, mobile applications are the most popular topic nowadays. The world has shifted from desktops to smartphones and is offering outstanding mobile applications to use. A faster and easier alternative to web browsing has been provided by the mobile applications. The user needs to launch a web browser and enter the URL and wait for the site to load for accessing or searching for the desired website. On the other hand, mobile applications are quick and take only a few seconds to launch. Mobile applications have the ability to serve multiple functions such as playing games, audio & video, news feeds, instant chat and many more. In short, it works as a direct channel that provides the user with all the information they need.

2.2.4 Usage of Application Platforms in Bangladesh

In Bangladesh, the percentage of user in various platforms are Android user is 79.21%, IOS user is 1.47%, Windows user is 0.86% and others are 18.46% in Bangladesh according to December, 2017 [6]. Android Phone are in first place. Apple users came at second place with a very large difference with the amount of android users, a very low percent of people use windows phone and other user who use other operating systems like blackberry, Symbian or bada. Android users in Bangladesh are high in percentage because of the variety of apps in app stores, low cost devices, easy to use interface and large amount of available free applications [7].

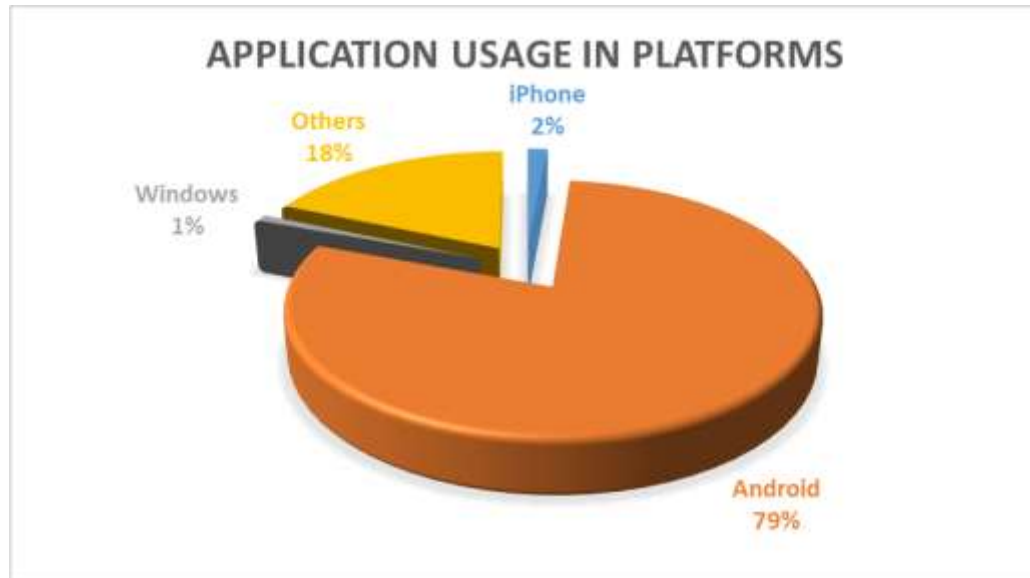

Figure 2.1: Percentage of users in various platforms.

2.3 Educational Application

The mobile application which is used for learning or something related to study purposes is known as educational application. User access these types of application for purpose of their study, academic text books available through applications, to check results of various exams, learn things out of the box, learn through video or audio recording, learning through games and many other purposes.

2.3.1 Educational Application in Bangladesh

Educational applications are getting popularity day by day in Bangladesh. Educational applications are increasing in current situation. Developers in Bangladesh are trying to develop more and more applications for learners in Bangladesh. Users are adopting practices gradually of using the educational application instead of learning through text books or tuition from coaching center or private tutor.

Chapter 3: Methodologies

The methodologies of this whole research have been summarized in this chapter. This summarizations consists of how this research has been started and what are the steps taken to fulfill the objectives.

3.1 Selecting the Related Applications

In this phase at first, to meet the objectives of this research, various platforms have been explored. Then, based on the usage of the platforms, a platform has been selected which covers the majority of the users in Bangladesh. Since, the required online applications have to be developed for educational purposes, many educational applications from the selected platform have been shortlisted. After that, based on the online research by doing study on these educational applications' details, only the applications from Bangladesh have been filtered manually. Finally, these filtered applications have been collected.

3.2 Extracting the Study Data

After filtering and collecting the data of the online applications from the platform, the application data have been sorted. From the sorted data and the descriptions of the applications, the targeted sectors of the education of Bangladesh have been possibly defined. Then, the number of applications of the targeted sectors have been counted and enlisted. Finally, the description has been summarized and present in understandable way. And examples of each targeted sectors have been discussed briefly as findings.

3.3 Analyzing the Study Data

In the last phase, after presenting the findings of this research by summarizing the targeted sectors, descriptions of the sectors and the number of the applications, the data have been analyzed. After analysis, the comparison among all the targeted sectors has

been showcased to show the differences among the sectors in terms of competition using number of applications. After that, the targeted sectors based the targeted application users have been analyzed and aligned with each other. And the percentage of the usage of the counted applications by the targeted users has been presented graphically. Finally, in the end of the analysis, the number of applications has been analyzed and categorized in levels based on quantity which also includes the targeted sectors to present its availability in the market and the scope of development.

Chapter 4: Findings and Analysis

In this chapter, collection of data and findings of this research work have been presented here. The targeted sectors generated from the collective information of applications, a short description of those categorized applications to understand for whom and for which educational sector these applications are referring to and finally total number of similar applications found under the particular targeted sectors are presented here. In addition, the analysis on these researched data are provided also. Based on data collection, comparison among all targeted sectors, quantity based categorization of the applications and the percentages of applications coverage by targeted users are presented here in the end.

4.1 Researched Targeted Sectors

The data after research on numerous applications related to this thesis has been collected and presented aligning with the targeted sectors below.

Targeted Sector	Description	Total Number of similar apps found
Pre School	These applications have been developed for helping the under aged children to learn the very basics of education such as Bengali and English letters, numbers, colors etc.	30
School/ High School	Users of these applications mainly gets the educational help for class one to twelve. They also get features of practicing using these applications.	34

Targeted Sector	Description	Total Number of similar apps found
Law Study	To get essential concepts on law, these applications have been developed for particular users.	141
Engineering Study	For the purpose of the study in Engineering, These applications have been offered by the developers. Users get opportunity to practice their lessons here.	21
Medical Study	Users of these applications mainly gets the educational help for medical study. Additionally, they also get the collection of the questions related to their study materials.	50
Religion Study	These applications have been developed for serving the learning materials about religions to the corresponding users. Users get the chance to study and learn about religion's rulings and histories.	77
Learning Drawing/Art	To learn the basics of drawing, sketching etc. at the very beginning of these topics, these applications have been made with simplicity.	5
Learning Photography	For the purpose of learning the basic knowledge in photography, these applications have been offered. Many enthusiasts get opportunity to learn and practice them.	7
Study of Health/Fitness	Users of these applications normally gets the information regarding problems and solutions of various health issues.	91

Targeted Sector	Description	Total Number of similar apps found
Learning Language	These applications have been developed for learning foreign languages in various methods for speaking and writing.	36
Learning Cooking	For the purpose of learning cooking or various recipes, these applications have been developed for the interested users.	76
Historical/ Story Books	To get historical story or educational story or popular writings, these applications have been presented to the users.	89
Dictionary	These applications have been developed for the purpose of learning the meaning of new words or translations.	23
BCS Study	For the study and preparation of BCS examination, These sort of applications have been made.	89
Bank Job Preparation	To get prepared for any bank jobs in Bangladesh, these applications have been developed for corresponding job seekers.	5
Engineering job Preparation	This application has been built to take preparation for engineering job, mainly mechanical engineering job.	1
Teachers job Preparation	For the purpose of taking preparation and collection of questions for teacher's job, these types of applications have been offered.	11
Training for Freelancing	To get knowledge on how to earn from freelancing, these applications have been built for them to earn independently.	40

Targeted Sector	Description	Total Number of similar apps found
Learning Business	These applications have been developed for those users who are willing to start a business or learn how to develop a business.	30
Educational/ Job Exam Results	In these applications users get the opportunity to receive educational or job exam results easily.	45
News	To get updated various types of news of Bangladesh, these applications play a very good role in general knowledge.	40
Online Training	For the purpose of training in various topics online, These applications have been developed for the users who are interested in personal development.	11
Lists of Educational Institutions	These applications have been built to focus on making lists of numerous educational institutions of Bangladesh.	13
Study Abroad	To study for the purpose of going abroad, these applications have been developed for the users such as IELTS, GRE etc.	17

Table 4.1: Researched targeted sectors with descriptions

4.2 Researched Examples of Targeted Sectors

After research there plenty of applications examples available to present. Based on the targeted sectors, about the sectors and example of each sector has been shown here.

4.2.1 Preschool

The sector preschool is categorized for the children who are not admitted into any primary school yet and learn mostly from their parents or family or nursery school. However, preschool is also known as playschool or pre-primary school or kindergarten.

There are many applications in the online store under this sector which are helpful for the educational development of the children of Bangladesh. But the main users of this sector are the parents as well as some playschool teachers as beginners, because they are able to access the online applications to help the children to learn where the children are not able to search and install the applications by themselves. One of the best examples is the “হাতে খড়ি (Bangla Alphabet)” application which has been found in the google play store [8]. This application is free of cost and offered by shurjoMukhi Limited. And this application has got 4.5 rating out of 5 so far. In this application the main target is to teach the children the Bengali alphabet and practice with hand by taking help from parents also. This type of application with better qualities and features may help the parents and children more in the future.

4.2.2 School/High School

The sector “School / High School” has been categorized here for the possible benefited teachers and the students of the country. The students who are targeted here can be from both primary school, secondary school and high school. However, the teachers who are engaged in these stages of education are also considered in this sector. This sector covers Primary School Certificate (PSC), Junior School Certificate (JSC), Secondary School Certificate (SSC), Higher Secondary Certificate (HSC) etc.

The students considering under this sector use or want to use a lot of online applications to advance in their education. In similar way, the teachers of these stages also take help from these applications to prepare their lessons to teach the students in the classes.

Among the available online applications, an example is the “NCTB All Books Free (class 1-12)” application which is offered by Md. Razon Hossain [9]. This application has got the response from the targeted users and got rating of 4.4 out of 5. Students of these stages get opportunity to access all the books approved by NCTB, Bangladesh which are completely free of cost and really helpful for PSC, JSC, SSC and HSC candidates.

4.2.3 Law Study

Another sector considered in this research is the “Law”. After the HSC or A-Level degree this degree can be an option for many students to become a lawyer as well as a barrister in the future. This degree includes all the law, rules or regulations regarding everything about the country. The Law Degree covers a massive amount of theoretical parts to cover all topics of a country’s rules and regulations.

This sector showed the most number of online applications among all other sectors in this research. Most of the applications are made in such way that each application covers each field of the laws of the country. For example, there is an application named “Bangladesh Constitution 16 AMD” which covers the whole constitution of Bangladesh. [10] It’s just like a pocket dictionary to the students of law degree. This application has been offered by Ryan Marzan. And it got 4.3 rating out of 5. There are more applications which cover particular segmentation in details.

3.2.4 Engineering Study

This sector explains all the engineering degrees is the similar stage as Law degree. The engineering degrees also need the requirement of Higher Secondary Certificate degree but the students must be from science background. Since there are a lot of engineering departments in Bangladesh right now, the numbers of students are also increasingly huge currently. After getting these specific engineering degrees, students can consider themselves as engineers.

These degrees which are commonly known as bachelor in science degree have the vast scope of knowledge in each and every department. But there are very less applications found in the online store which covers only a few departments among so many of them. One of them is the “Electrical Bangla Book” application which has the rating of 4.4 out of 5 and is offered by AtikurRahmanProject [11]. This application covers the Electrical Engineering subjects in Bengali language. But there should be each and every departmental subject related applications in Bangladesh as per the requirements of the students and teachers of this stage.

4.2.5 Medical Study

The medical degrees are for the students who want to be a doctor in future. But they need one of the lengthiest course curriculums in education. They study on human body, their diseases, medicines of the diseases etc. Considering specially these students and teachers of this stage, this sector has been considered.

These degrees need a lot of hard work, patience, sincerity and guideline to be completed. Students can take help from the online applications. For example, the “মানবদেহ (Human body)” application is offered by Health tips bd [12]. It has got rating of 4.6 out of 5. Discussion of all organic and inorganic body problems along with solution, medication and instructions, which is related to human body can learn from this application. Also there are some mobile applications for study of alternative medical practice such as Homeopathy and Ayurvedic Medicine.

4.2.6 Religion Study

This sector has been created in this research for them who want to learn about their corresponding religion by themselves from online or home. The main religions are Islam, Hinduism, Christianity, Buddhism etc. in Bangladesh. But the majority of the population of the country is Muslim who follow Islam but support other religions too with respect.

The religious people of the country always want to learn, perform and study something about their religion by themselves without going any institutions. So, online application can be a very good platform for them to study or learn from home. Moreover, there are religion books in the curriculum of every class also to engage the students with religion from the very childhood in Bangladesh.

To learn religion's topic, there is a very good opportunity in the online store to get related applications in Bangladesh. Most of the applications are found for Islam, Hinduism and Christianity. And there are very less applications for Buddhism. Since the majority of the country is Muslim, a good example is the “আল হাদিস (Al Hadith)” application. [13] This application is offered by “Islamic Resource Development – IRD” which has got rating 4.9 out of 5. In this application, Muslims are able to learn about their religion's rulings preached by their Prophet.

4.2.7 Learning Drawing/Art

One of the most popular and respecting department is art or drawing in the world. It includes all types of artistic activity such as sketch, painting, coloring, sculpturing, oil painting etc. which has a need of artistic minds from the very childhood with proper learning and practice. For this huge number of gathering of people in this sector, it has been selected as one of the sectors in this research.

This sector has an impact in Bangladesh also. Students are encouraged to learn drawing or art from their childhood. But mostly parents force their children to learn this from another institution apart from academic institution. It covers extra expenses also. To overcome the situation, online application plays a vital role for the parents and students also with creative ideas. Though in Bangladesh, there is not sufficient amount of online applications available currently. One of the available applications is the “Arctecture Draw, Sketch, Paint” application which has the 4.3 rating out of 5 and offered by Samsung

R&D Institute Bangladesh. [14] This application offers learning about sketch, drawing and painting.

4.2.8 Learning Photography

This sector has been considered here in this research for the photography enthusiasts or learners. Those who are interested to be a photographer or photojournalist in life, always try to search new things about photography. However, many people take photography as a hobby and they also want to learn from the beginning to the advanced level.

Bangladesh is currently in a phase, where many people are developing in photography as a hobby or as a professional photographer. So these enthusiasts or learners want to advance by learning more on various types of photography. As per demand, there are not sufficient applications online in Bangladesh or in Bengali language. One of them is “Learn Photography in Bangla” which is offered by Mehadi Hassan and it has got rating of 4.7 out of 5 [15]. So, this sector should be developed.

4.2.9 Study of Health/Fitness

Another sector has been emerged in this research known as health/fitness due to its major needs throughout the country. A massive number of people of this country is sick for various reasons. Although there are plenty of doctors to take care of this sector, but it is not enough for such huge population.

People from all around the country want to be cured from any disease without costs since majority of the population is poor in this country. So, the online applications can help vastly in this matter to help them to be cautious in right time or to take necessary steps as after effects. There are plenty of applications found under this sector such as the “কোন রোগের কি ঔষধ” application [16]. It is offered by Health tips bd and has rating 4.4 out of 5.

This application has got the maximum number of rating among all other application under this sector in play store for Bangladesh.

4.2.10 Learning Language

Learning language has become a new challenge for any person of the world to communicate with many foreigners and to travel in many countries for various reasons. Perhaps, since English is the international language, everyone must learn it for any international or multinational purposes. So, this sector has been chosen for this particular reason for our country.

One of the main reasons to learn English is to cope up with the other developed countries like USA, Canada, UK, Australia etc. But according to current situation of Bangladesh is that many people are not well educated. That is why the uneducated or low educated people always want to learn from online easily. And there are a lot of online applications there in the online store for Bangladeshi users. One of them is “৩০ দিনে ইংরেজী শিখুন” application which has rating of 4.1 so far and is offered by Amar Apps [17]. There are some mobile applications available for learning different languages also. User can easily use these applications to learn or improve different languages as per their requirements or wish. This sector still needs to be developed with quality applications and features.

4.2.11 Learning Cooking

This sector is all about learning on how to cook or what to cook, when to cook and what to cook. It has been considered as an educational sector due to its necessity to the survivors and independent users.

There are many types of recipes for cooking to be learned for every class of people. Many applications have been developed on these recipes or learning methods of cooking. And there are a lot of such applications found in the online store. For example, the

“বাঙালী রান্না - Bangla Recipe” application has been offered by Bangali Apps with 4.5 rating and which is covering all type Bengali recipe cooking methods [18].

4.2.12 Historical/Story Books

This is a sector which is about all random story books and considered in this research for its definite usage by the users. It includes all the historical stories and knowledge needed for a person for their nation to be remembered. It also includes all interesting historical events.

There have been a lot of applications found regarding story books in online store in Bangladesh. One of the many applications is the “Boighor - Bangla Audio Ebook” application which has been offered by chorui.com and got rating of 4.5 out of 5 [19]. It is a very learning sector for general users of Bangladesh.

4.2.13 Dictionary

This sector has been considered in this research for the purpose of knowing the meaning of words of one language by using other language.

In Bangladesh perspective, users mainly want to use English dictionary to learn about English. But other language dictionary can also be helpful for those who need to learn other languages but not getting any proper dictionary easily available. The “Bangla Dictionary Offline” can be a good example for the English word learners [20]. This application has been offered by INNOVATIVE-SOFTWARE and the rating for this application is 4.5 with many users. There are plenty of other dictionaries with different interface and features in the online application store.

4.2.14 BCS Study

This sector has been chosen in this research for the BCS cadre examination targeted users in Bangladesh. This examination is held every year for the citizen of Bangladesh which offers the highest ranks and ensures maximum pride in the society for anyone's life.

For securing a government job or the future career with highest prestige, people of Bangladesh are highly diverted into this sector. Almost more than a few lakh people attend the examination every year. So this sub-domain is a must for developing for the users of this country. There are good amounts of applications found already such as the “BCS Question Bank and Solution বিসিএস ১০ম - ৩৭তম” which has been offered by DorkariApps BD with rating of 4.3 out of 5 [21].

4.2.15 Bank Job Preparation

This sector is considered here in this research for the job seekers who only target the bank jobs and always seek application regarding career oriented learning. Bank jobs in Bangladesh have become a popular topic next after BCS examination.

There has been a continuous research on this sector. But there is not sufficient number of applications available. One of the few examples is the “ব্যাংক জব প্রিপারেশন - Bank Job Preparation” which has been offered by App Super Market and 4.2 rating so far [22].

4.2.16 Engineering Job Preparation

This sector is considered here in this research for the job seekers who only target the engineering jobs and always seek application regarding career oriented learning. Engineering jobs in Bangladesh has become a popular topic next after BCS examination and bank jobs.

There has been a continuous research on this sector. But there is only one application available. It is the “Mechanical Job Preparation” which has been offered by Hasin Rehana and 4.8 rating so far [23].

4.2.17 Teacher’s Job Preparation

This sector has been selected in this research for the job seekers who only want to be a teacher by profession which is a very respectable job.

Currently there is not sufficient number of applications available regarding this sector. One of the few examples is the “শিক্ষক নিবন্ধন প্রশ্ন ব্যাংক shikkok nibondon Q&A” which has been offered by BdmobilesApps and 4.5 rating so far [24]. This application offers previous year’s questions of school registration examination questions and answers.

4.2.18 Training for Freelancing

This sector is considered here in this research for the job seekers who wants to work online and from home individually by himself/ herself. Freelancing in Bangladesh has become a trending topic nowadays.

There are many applications available in this sector. One of the examples is the “ফ্রিল্যান্সিং ও আউটসোর্সিং” which has been offered by LateNightBirds and got the rating of 4.1 out of 5 so far [25]. From this application user get to know about freelancing, how to do freelancing, what steps should one take to be a freelancer etc.

4.2.19 Learning Business

Learning business refers to the learning about the procedures of opening a new business and developing an existing business or making maximum profit from an existing

business. This sector is considered here in this research for the business enthusiasts or the future entrepreneurs who either want to start up a new business or expand the existing business.

Since Bangladesh is an over populated country, any business can have required amount of customers. But there is not very healthy number of applications found in the online store as per expectation although the current number of applications may be growing. One of the few examples is the “ব্যবসা করার কৌশল” which has been offered by Rain Drop Studio and 4.4 rating so far [26].

4.2.20 Educational/Job Exam Results

In this sector, educational or the job examination results are considered for the students as well as the job seekers who want to search for their corresponding examination results after participating in them.

After the research on this sector, there is sufficient number of applications found. One of the many examples is the “All Exam Results - JSC SSC HSC” which has been offered by BD Education and 4.3 rating so far [27].

4.2.21 News

This sector is here in this research for the targeted users who want to get updated with the latest information about everything around the country or world and always seek applications regarding continuous news provider.

This sector includes various news providing applications such as newspapers, magazines, online streamers etc. An example is the “All Bangla Newspapers” which has been offered by Future Apps Ltd. and 4.3 rating so far [28].

4.2.22 Online Training

Online training has been considered as a sector here in this research for those who want to learn something new apart from the educational subjects and utilize the knowledge in various extracurricular activities as well as in many varieties of jobs.

Researching on this sector gives a new idea about the vast learning or training opportunities about different topics. But there is not very sufficient number of applications available in the application store to utilize. One of the very few examples is the “কম্পিউটার ট্রেনিং” which has been offered by Nasir BP and 4.4 rating so far [29].

4.2.23 List of Educational Institutions

This sector has been considered for the students and parents who always seek the information regarding educational institutions in every stage of education. This list includes list of schools, list of colleges, list of universities etc.

So far, there have been a few number of applications found under this sector. One of the found examples is the “BD All University Info” which has been offered by Saiful Haque Hridoy and 4.6 rating so far [30].

4.2.24 Study Abroad

This sector is under consideration because of the students who want to go abroad for study purpose. There are few requirements needed before going to study abroad which are covered using multiple learning process by these applications.

On the way to search these applications, many of them have been found for the preparation only before going to abroad.. One of the examples is the “IELTS Preparation in bangla” which has been offered by ERT Apps and 4.5 rating so far [31].

4.3 Comparison among all Targeted Sectors

After the categorization of the targeted sector and the confirmation of the number of applications in each sector, the comparison among the targeted sectors are considered here in this research can be presented in a competitive way for the understanding of the engagement of the applications in particular sector in the field of mobile educational application in Bangladesh.

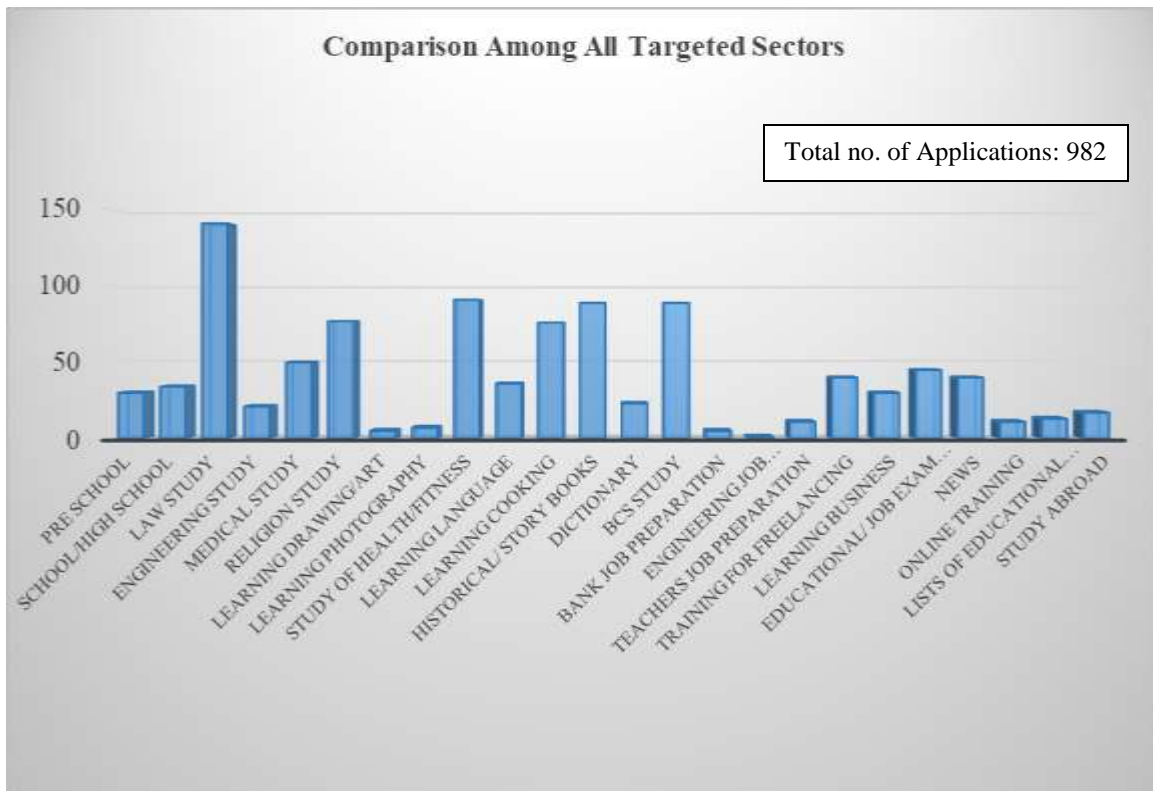

Figure 4.1: Comparison among all Targeted sectors.

4.4 Quantity based categorization of the applications

According to the data findings, some applications are found high in number, some of them are very low in number and there are some number of applications which are in between them. The highest number of applications start from 76 and ends at 141. The

lowest number of applications start from 1 and ends at 23. And the in between number of application start from 30 and ends at 50. From the findings, there are no number of applications for any sector between 24 to 29 and 51 to 75 found. Hence, three levels are considered in this research based on the quantity of the applications. They are mentioned here as the high quantity level, the average quantity level and the low quantity level.

4.4.1 High Quantity List

There are six targeted sectors with maximum numbers of applications under this section considered here in this research. Among the considered targeted sector “Law Study” has the maximum number of application which is ‘141’. “Study of Health/Fitness” is in the second position with ‘91’ number of applications. After that “BCS Study”, “Historical/Story books”, “Religion Study” and “Learning cooking” have the ‘89’, ‘89’, ‘77’ and ‘76’ applications respectively belonging to these sector.

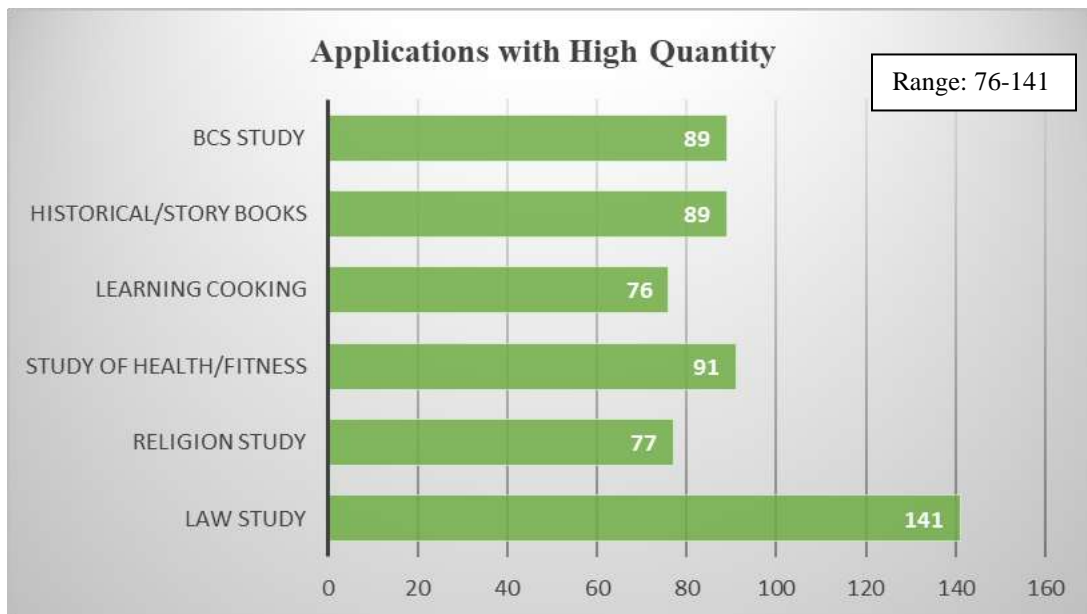

Figure 4.2: High quantity list of the applications

In this section, the number of applications for the targeted sectors are quite sufficient. Most of the applications under this list are very similar to each other. So, rather than the

quantity of the applications, the quality of them should be the focusing area. The similar applications under this list should be developed by improving the user friendliness of application, more utilizable features and definitely more writings in Bengali language.

4.4.2 Average Quantity List

Five targeted sectors with average number of applications under this section considered here in this research. Among the considered targeted sector “Medical Study” has the maximum number of application which is ‘50’. After that “Training for Freelancing”, “Educational/ Job Exam Results”, “Learning Language” and “News” have the ‘40’, ‘45’, ‘36’ and ‘40’ applications respectively belonging to these sector.

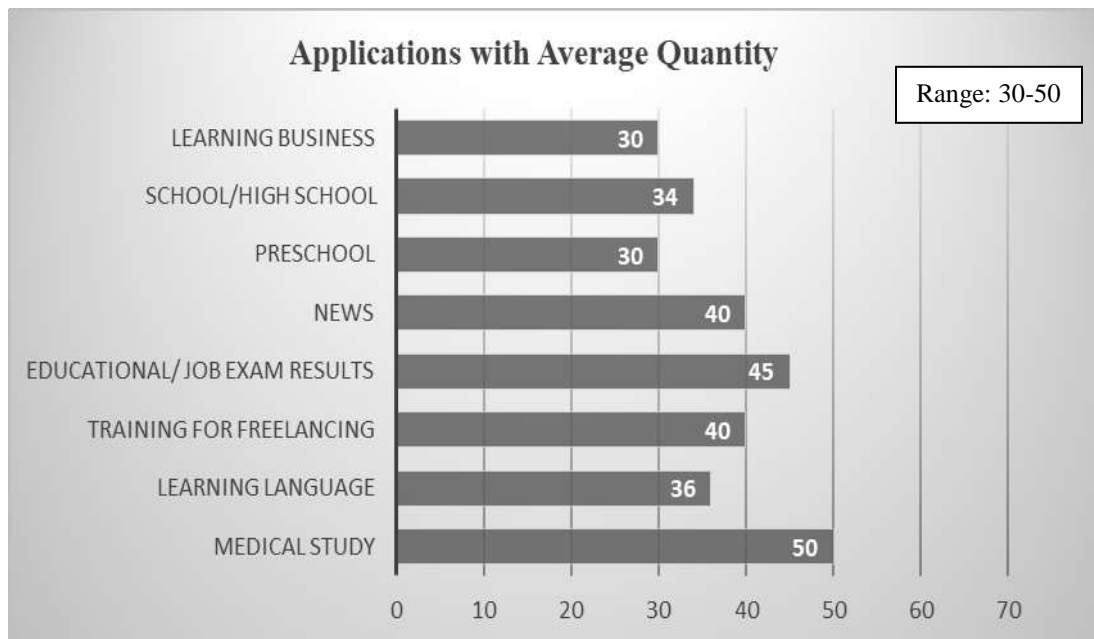

Figure 4.3: Average quantity list of the applications

4.4.3 Low Quantity List

There are ten sectors which are targeted with very least number of applications under this list considered here in this research. The lowest amount of applications are in the “Engineering Job Preparation” sector which has only one application available under it.

Respectively, the next sectors are Learning Drawing/Art, Bank Job Preparation, Learning Photography, Teacher's job Preparation, Online Training, List of Educational Institutions, Study Abroad, Engineering Study, Dictionary which have the number of applications of '5', '5', '7', '11', '11', '13', '17', '21' and '23' respectively.

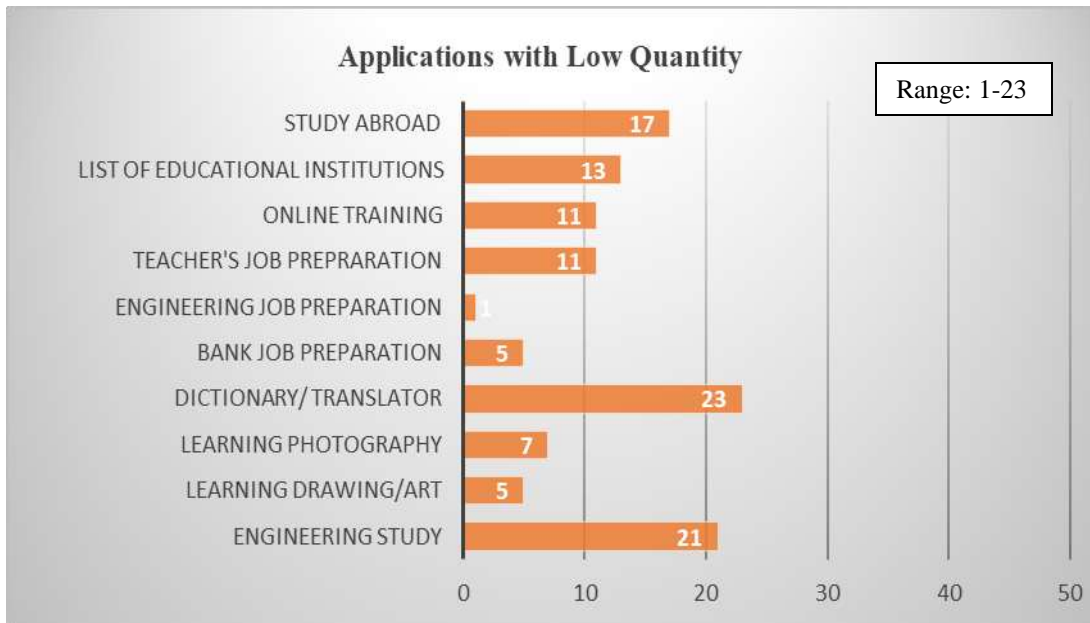

Figure 4.4: Low quantity list of the applications

4.5 Applications Coverage by targeted users

After expanding the research on the mobile educational applications in Bangladesh, some applications coverage can be showcased based on targeted users highlighted as per applications' descriptions. According to the relation between targeted users and targeted sectors, educational applications of some specific sectors, target some specific users. Such as Preschool and Learning Drawing/Art both sectors are targeted for "Parents and Childrens", "Techers and Students" are targeted for respectively school/ high school, law study, engineering study, medical study, list of educational institutions and study abroad. The user "Business Enthusists" is targeted for only the sector learning business. Some sectors like BCS study, Bank job preparation, engineering job preparation, teacher's job preparation and training for freelancing are targeted for specially "Job Seekers/ Holders"

and rest of the sectors which includes religion study, learning photography, study of health/ fitness, learning language, learning cooking, historical/ story books, dictionary, educational job exam results, news and online training are targeted for “General Users”.

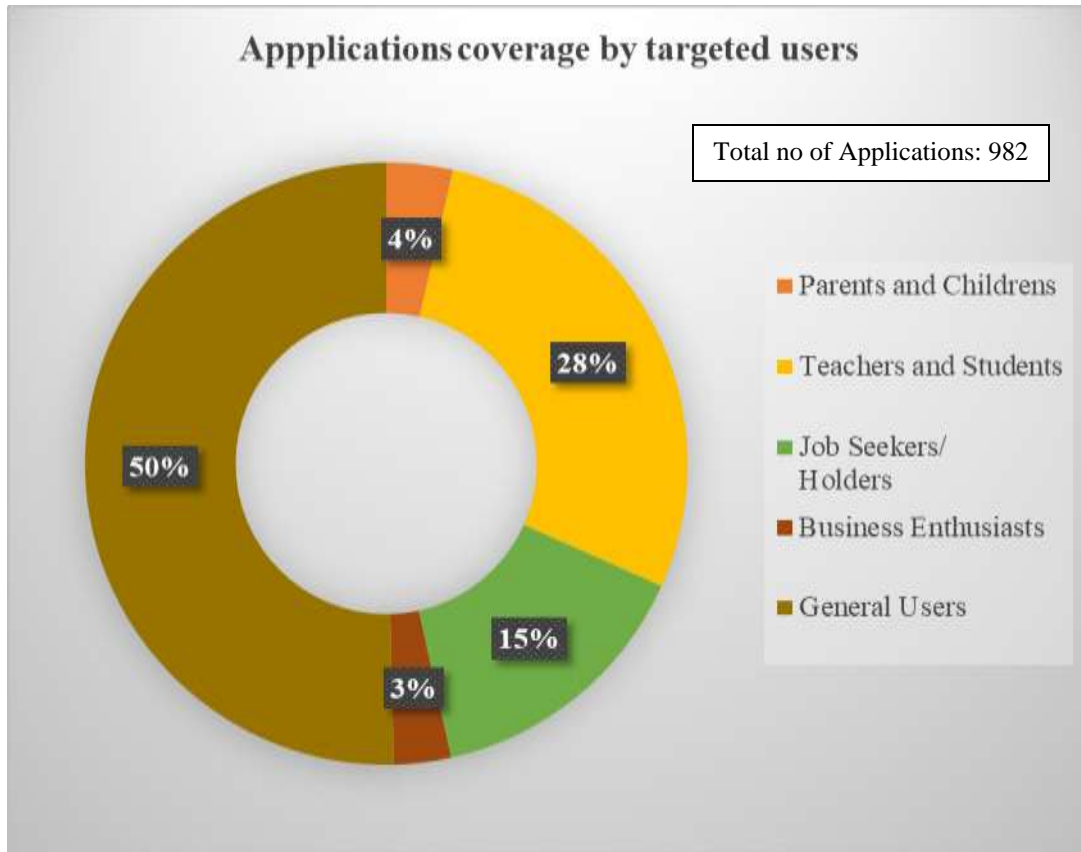

Figure 4.5: Applications coverage by targeted users

4.6 Researched Keywords for Targeted Users

To accomplish the purpose of this research, there has been a lot of keywords researched and enlisted here which directs particular users to get the particular desired applications from the application platform. All the categorical targeted users holds the handful amount of keywords to get the desired applications online except ‘Business Enthusiasts’. Among them, ‘Teachers and Students’ and ‘General Users’ targeted users hold the most number of keywords.

Parents and Childrens

- Preschool apps in bangladesh, kids learning apps in bangladesh, প্রি স্কুল, শিশু শিক্ষা, শিশুদের ইংরেজি বই, ছোটদের বই, Learn Drawing in bangla, painting app in bangladesh, অঙ্কন, অঙ্কন শিক্ষা,

Teachers and Students

- Apps for school students in Bangladesh; learning tools for students in Bangladesh; NCTB, পাঠ্যবই, আইন, আইন বই, আইনের ধারা, law in bangladesh, Bachelor degree in Engineering in bangladesh; electrical engineering app in bangla; civil engineering in bangla; Textile engineering in bangla, ইঞ্জিনিয়ারিং বই, medical study in bangla, মেডিকেল প্রশ্ন ব্যাংক, university in bangladesh, school and college in bangladesh, polytechnic institutes in bangladesh, বিদেশে পড়াশুনা; Study abroad in bangla; IELTS in bangla; GRE in bangla

Job Seekers/holders

- BCS, ক্যাডার, Bank jobs bangladesh, ব্যাংক জব প্রিপারেশন, ব্যাংক জব প্রশ্ন, Engineering job preparation bangladesh, শিক্ষক, শিক্ষক নিবন্ধন গাইড, শিক্ষক নিবন্ধন লিখিত প্রশ্ন ব্যাংক, teacher's job in bd, ফ্রিল্যান্সিং ও আউটসোর্সিং, freelancing in bangladesh, outsourcing in bd

Business Enthusiasts

- ব্যবসা, business in bangladesh

General Users

- religion in Bangladesh; vedas in bangladesh; bible in bangla, Buddhism in bangla, learn Photography in bangladesh, ফটোগ্রাফি, health apps bangla, Learn languages in Bengali, ভাষা শিক্ষা, রান্না শিক্ষা, রান্নার বই, Learn cooking in Bangla, Story books in Bangla, শিক্ষণীয় গল্প, বাংলা গল্পের বই, translator in Bangladesh, অভিধান, বাংলা অভিধান, Bd results, পরিষ্কার রেজাল্ট, News in bangla, সংবাদ, সংবাদপত্র bd, training online in bangla, অনলাইন প্রশিক্ষণ, ট্রেনিং

Figure 4.6: Researched Keywords for Targeted Users

Chapter 5: Discussion and Recommendation

In this chapter, the discussion and recommendation regarding mobile educational applications have been discussed. Discussion on researched information and recommendation for further development about mobile educational applications are reviewed here.

5.1 General Discussion

Mobile education has come into view since the arrival time of the smartphone devices such as android phones in Bangladesh. With a variety of resources available online, mobile education provides more options for the personalization of learning. Mobile Education requires online applications which are currently available in online application store. To solve subjective problems, to work on academic projects, to meet individual needs in terms of learning and to upgrade knowledge based skills, these different types of applications play a significant part in education of Bangladesh. Having access to sufficient contents anytime and anywhere, there are a good number of opportunities for formal and informal learning, both inside and outside the academic institutions.

5.2 Discussion on Analysis

After several attempts of researching on this thesis topic of mobile educational applications in Bangladesh, multiple targeted sectors have been arisen to be discussed which present the necessity of this online applications categorically. From the list of categorical sectors, comparison arrived among the targeted sectors. After that, a number of applications in every targeted sectors have been dedicatedly assigned with counts. After assigning the applications in dedicated sectors, a possible list has been created based on quantity of the mobile applications. The list have been considered in three different categories which are high, average and low quantity list. All the sectors having the maximum numbers of application are considered in high quantity list, such as “Law study” sector has 141 applications and the sector “BCS study” has 89 applications

available. The sectors having minimum or very least numbers of applications are categorized as low quantity list of applications, such as sector “Bank Job Preparation” has only 5 number of applications available and sector “Online Training” has 11 applications only. The rest of the applications which are in between these two level in terms of number of applications, segmented as average quantity list of applications. They are almost half in numbers of high quantity list such as, sector “Medical Study” has 50 number of applications and “School/High School” sectors has 34 number of applications. From the descriptions of the applications, it can be clearly said that the motives of the applications are pointing or covering to some targeted users which have been enlisted, analyzed and highlighted here in this research. In the analysis, the general users of online applications cover the 50% of the targeted sectors of the applications which is the highest and the half of the coverage among all other users. In the second position of this coverage, the targeted users are the teachers and students of this country. They are on the list of the specific categories whom are targeted while developing such corresponding online applications. They are covering currently 28% of the total coverage. And the rest of them are job seekers or holders, parents and childrens and business enthusiasts whom are having consecutively 15%, 4% and 3% coverage from the total users.

5.3 Recommendation for further development

According to the comparison among the sectors some sectors belong quality number of applications and some sectors has minimum. The sectors belong minimum number of application, applications developers should pay an attention to those sector to increase the number of applications. The sectors which has maximum number of applications, after analyzing the applications, most applications found very similar to each other. Mobile application developers in Bangladesh can concentrate in these sector to improve the quality of the applications rather than increase the quantity. Analyzing the description of the application maximum applications do not have the practicing opportunity for the learners. Since educational applications are all about education, practising feature should be increased in most of the applications for users. So that, users can get the opportunity to practice more and more on what they have learned from the applications.

Chapter 6: Conclusion

In this chapter, the research conclusion regarding mobile educational applications has been concluded. Conclusion on general information of this research, limitations of the methods of this research and future plan has been written here.

6.1 General Conclusion

In terms of education in Bangladesh, the current status of online educational applications in Bangladesh is clearly visible through this research. Since, Bangladesh is developing digitally, the online applications usage is increasing day by day and the number of applications are also increasing as per demand. These applications may not fulfill all requirements of the targeted users but at least they are covering almost all the users of these educational online applications. This research also highlights some possible implications for the present or the new developers of these corresponding applications. Additionally, this research summarizes the educational aspects to the users of these applications of this country.

6.2 Limitations

Behind every accomplishments, some certain limitations stand in the way. As usual, this research also had some limitations. Among them one of the major limitations is the lackings in the filter options of the application platform. There could be an advanced filter option to get the desired online applications properly. For example, there could be the country selection option.

Another limitation can be the unavailability of the proper keywords in the applications. Most of the applications do not appear with proper keywords just because the applications do not contain related proper keywords in them. So, it is difficult to find an application in the online store using related keywords.

6.3 Future Plan

Since this research has been developed targeting Bangladesh, but it should not be limited to this country only. The future plan of this research should be the same research for the world too. Thus, all the countries can competitively follow other countrys' applications and develop theirs to advance more in their education. Moreover, this research can be extended more, based on the future status of the other platforms, more number of related applications, based on the usage of more parameters and more analysis by performing extensive research and field online surveys.
