## **APPROVAL**

This Project titled “**Health Builder: An android application**” submitted by Md. Aktaroozzaman, Md. Mehedi Hasan and MD. Shafiqul Islam to the Department of Computer Science and Engineering, Daffodil International University has been accepted as satisfactory for the partial fulfillment of the requirements for the degree of B.Sc. in Computer Science and Engineering and approved as to its style and contents. The presentation has been held on 6th May 2018.

### **BOARD OF EXAMINERS**

---

**Dr. Syed Akhter Hossain**  
**Professor and Head**

**Chairman**

Department of Computer Science and Engineering  
Faculty of Science & Information Technology  
Daffodil International University

---

**Dr. Sheak Rashed Haider Noori**  
**Associate Professor & Associate Head**

**Internal Examiner**

Department of Computer Science and Engineering

## ACKNOWLEDGMENT

First we express our heartiest thanks and gratefulness to almighty God for His divine blessing makes us possible to complete the final year project successfully.

We fell grateful to and wish our profound our indebtedness to **Nusrat Jahan, Lecturer**, Department of CSE, Daffodil International University, Dhaka. Deep knowledge & keen interest of our supervisor in the field of android development influenced us to carry out this project. Her endless patience, scholarly guidance, continual encouragement, constant and energetic supervision, constructive criticism, valuable advice, reading many inferior draft and correcting them at all stage have made it possible to complete this project.

We would like to express our heartiest gratitude to **Dr. Syed Akhter Hossain, Professor and Head**, Department of Computer Science and Engineering, for his kind help to finish our project and also to other faculty member and the staff of Computer Science and Engineering department of Daffodil International University.

We would like to thank our entire course mate in Daffodil International University, who took part in this discuss while completing the course work.

Finally, we must acknowledge with due respect the constant support and patients of our parents.

## **ABSTRACT**

This project is goal to developing an online & offline health measurement system. This project is to build an android based, online health measurement system, named Health Builder: An Android-Based solution for maintaining health. This system provides an online platform for a quick access to the required user. It is helpful for any people. This system person who is interested in measure the health they can register and measure their health condition. To develop this android application we used Android Studio, which helps us to build this application faster. We also used for better GUI design and make this application user friendly. After implementation of all functions, the system is tested in different stages and it works successfully as a prototype.

# Chapter 1

## Introduction

### 1.1 Introduction

Our project is based on health related field. Our project will decrease the death rate of human in lack of health awareness. Our main goal is to help people to maintaining their health condition. This application any person who is interested to maintain their health can register and maintain their health by following our project instruction. By using our project people can gain a good health easily. By using it user can gain weight, maintain weight and lose weight which one they want. User also can calculate their daily taken food calories.

### 1.2 Motivation

There are some problems that motivate us to work with this project. Some people are very ignorant of their health awareness. That's why many of us suffer from health related problems. Health is wealth. It is very well said. Without health nothing can be achieved, nothing can be enjoyed. Health is the most important aspect of one's life. If we have a sound health then we can have a sound life. These causes have motivated us to work with this project. We will try to fix this problem with this application.

### 1.3 Objectives

Objectives of our android application are mentioned below:

- ❖ The main objective of this project is to maintaining current weight.
- ❖ For losing weight.
- ❖ For gaining weight.
- ❖ Checking food calorie.
- ❖ Checking Burned calorie.
- ❖ All registered members will get the opportunity to find a good health using this application.
- ❖ All registered member will get a unique id.

## 1.4 Expected Outcome

If user fulfilled his/her required calorie then user can build a good health by this application without consulting any doctor. Fat people can lose their weight and thin man can gain weight by following this application. User can also calculate their daily taken food calories by this application.

## 1.5 Why we chose Android

Android has appreciated a brilliant ascent to the best in its short life expectancy, and its a dependable fact that it as of now overwhelms the versatile market in number of dynamic clients. Its piece of the pie now floats around 80% all inclusive with Apple left holding a staying 13% cut of the cell phone pie. BlackBerry, the once ruling lord, and Windows Phone are only the scraps. There are likewise no indications of backing off for Google's portable stage as it at present achieves 1.5 million every day initiations. Such fast development has likewise helped Android achieve the great breakthrough of 1 billion gadget enactments.

The rate of world-wide smartphone sales:

Figure 1.1: World-wide smartphone sales ratio.

## Chapter 2

### Background

#### 2.1 Introduction

Our system will be an interactive android application that can be operated by smartphones, tablet etc. In need of health awareness sometimes we can't go to doctor every now & then. Our project will help people in this trouble situation. Our project will help for getting daily life calorie target of people.

#### 2.2 Related Works

We have Research plenty of documents related with foods. We have monitored the functionalities of some health application. This application is highly decorated with functionalities. They are equipped with many technical features. Some applications are following:

Figure 2.1: Some android application of Good health system.

##### 2.2.1 Common features of these application are:

- Register as user.
- Calorie Counter for target, gain and lose weight.
- Calorie Counter for consumed calories by meal.

### 2.2.1.1 Register as User

The register is maintained with a data processing system. Any person can register in this system.

The following data is entered into the register, as applicable:

Email Address or

Phone Number or

Google Account.

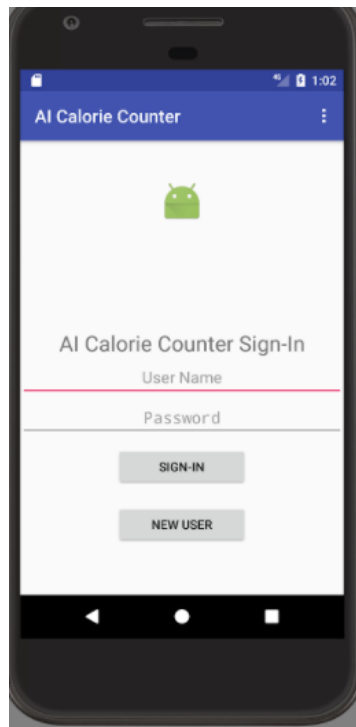

Figure 2.2: User registration demo.

### 2.2.1.2 Calorie Counter for target, gain and lose weight

When a people want to count calorie for target, gain and lose weight then user need to fill up their height, gender, age, current weight and goal weight. Then user get the result.

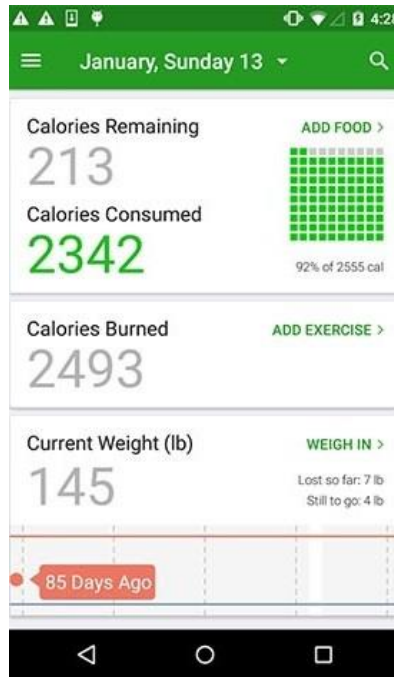

Figure2.3: Calorie counter for target, gain and lose weight.

### 2.2.1.3 Calorie Counter for consumed calories by meal.

When a people want to count calorie for consumed calories by meal then user need to fill up their taken food name, taken food quantity. Then user get the result.

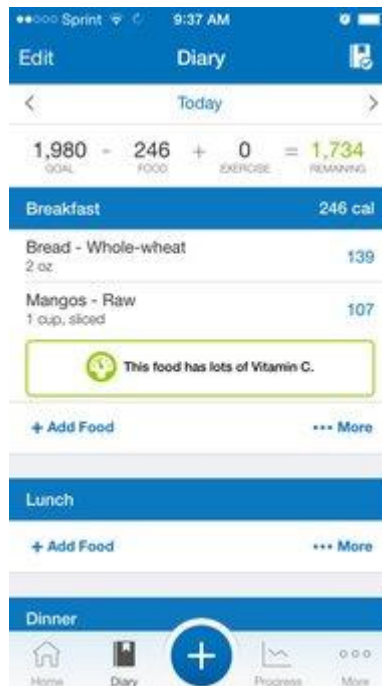

Figure 2.4: Calorie counter for consumed by meal.

## 2.3 Comparative Studies

Our implemented application is different from the existing application. Without registration user can calculate the required calorie for gain, maintain and lose weight. All authenticated registered members will get the opportunity to calculate daily taken food calories with their quantity. This Application will help to notify our health condition.

## 2.4 Challenges

- User must update profile after registration
- According to the user information showing the accurate calorie needed.
- Calculate calories based on taken food.

## 2.5 Project Schedule/ Gantt Chart

Here is our project schedule:

120 Days							
Development Phase	0 to 20 Day	21 to 40 Day	41 to 60 Day	61 to 80 Day	81 to 100 Day	101 to 120 Day	Duration (Day)
Requirement Gathering							0 – 10 (10 days)
Analysis							11 – 20 (10 days)
Design							21 – 60 (40 days)
Coding							31 – 100 (70 days)
Testing							81 – 110 (30 days)
Implementation							101 – 120 (20 days)
Documentation							11 – 120 (110 days)
Total Time (Day)							120 Days

Figure 2.5: Gantt chart of our project.

## Chapter 3

### Requirement Specification

#### 3.1 Business Process Modeling

Business process modeling (BPM) is an engineering system and the mobility of the representing method of an enterprise, and the running process explore and raised. It emblematically accomplished by the business analysts, who provide the expertise modeling system. Other was it process model may be grow directly from event's log by using process mining tools.

#### 3.2 Requirement Collection & Analysis

Here some requirements are given that collected when implementation of software or the data collections. The requirement collections are given below:

- To collect the users problem.
- Must need the user information given on application.
- Needed to be registered for using the app.
- Must be needed a valid mobile number, google account or email address for login the user profile.
- Needed to collect the personal opinion of user.

#### 3.3 Requirements:

We using this tools to complete our project:

1. Used programing languages such as Java, xml etc.
2. Firebase server and android studio.

We used Firebase database connection, and android studio for Raw coding.

### 3.4 Use Case Diagram

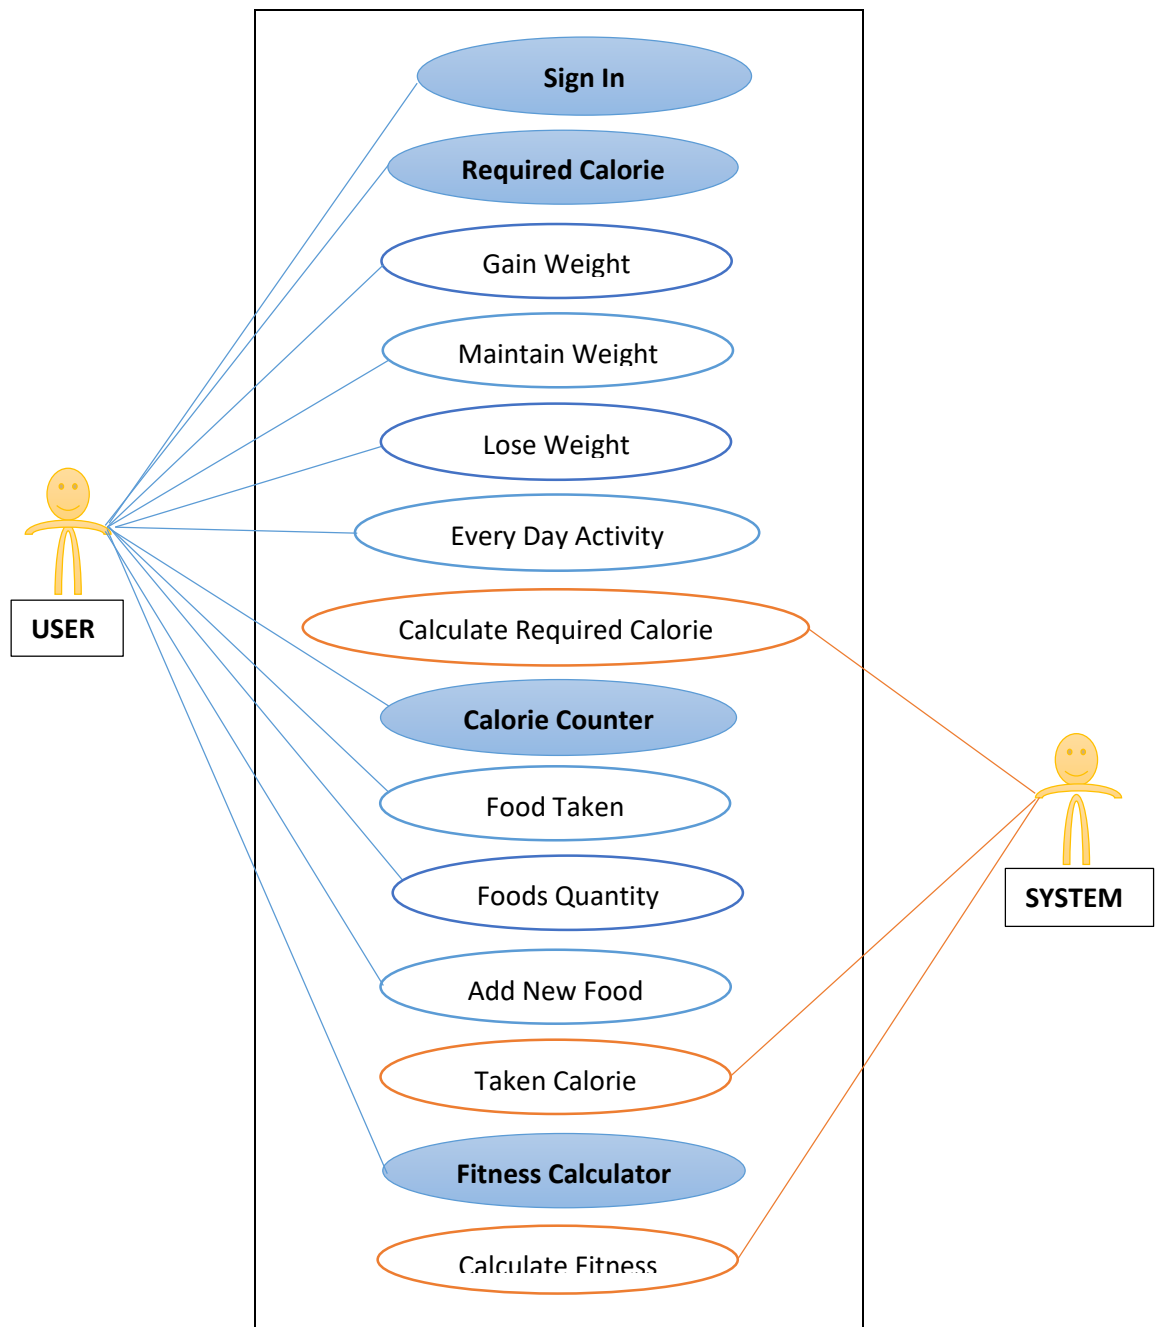

Figure 3.1: Use Case diagram of our application.

### 3.5 Detailed Use Case

The details of use case diagram from our use case diagram figure:

Table 3.1: Use case description of Sign in

Use Case #01	Sign In
Primary Actor	User
Secondary Actor	System
Pre-Condition	Open the application
Scenario	<ol style="list-style-type: none"><li>1. Sign in with email.</li><li>2. Sign in with phone.</li><li>3. Sign in with google.</li></ol>
Post-Condition	<ol style="list-style-type: none"><li>1. Sign in successfully completed or failed.</li><li>2. Display main page.</li></ol>

Table 3.2: Use case description of required calorie.

Use Case #01	Required Calorie
Primary Actor	User
Secondary Actor	System
Pre-Condition	Complete sign in system before.
Scenario	<ol style="list-style-type: none"> <li>1. Select your goal- <ul style="list-style-type: none"> <li>• Gain Weight</li> <li>• Maintain Weight</li> <li>• Lose Weight</li> </ul> </li> <li>2. Select every day activity.</li> <li>3. Click “Next” button.</li> <li>4. Enter Height.</li> <li>5. Select gender.</li> <li>6. Enter current weight.</li> <li>7. Enter goal weight.</li> <li>8. Enter age.</li> <li>9. Click “Show required calorie” button.</li> </ol>
Post-Condition	<ol style="list-style-type: none"> <li>1. Showing required calorie or error.</li> <li>2. Click on “Next” or “Back” button</li> </ol>

Table 3.3: Use case description of calorie counter.

Use Case #01	Calorie Counter
Primary Actor	User
Secondary Actor	System
Pre-Condition	Complete required calorie menu.
Scenario	<ol style="list-style-type: none"> <li>1. Enter your taken food name.</li> <li>2. Enter your taken food quantity.</li> <li>3. Select “Exercise” option with duration.</li> <li>4. Click “Calculate” button.</li> <li>5. Click “Add new food” button.</li> </ol>
Post-Condition	<ol style="list-style-type: none"> <li>1. Showing taken calorie or error.</li> <li>2. Click on menu button or exit.</li> </ol>

Table 3.4: Use case description of fitness calculator.

Use Case #01	Fitness Calculator
Primary Actor	User
Secondary Actor	System
Pre-Condition	Click on menu item and select fitness calculator option.
Scenario	<ol style="list-style-type: none"> <li>1. Click “Calorie &amp; BMR” button.</li> <li>2. Click “Body fat” button.</li> <li>3. Click “Nutrition needs” button.</li> <li>4. Click “Heart rate” button.</li> <li>5. Click “Body mass index” button.</li> <li>6. Click “Ideal weight” button.</li> </ol>
Post-Condition	<ol style="list-style-type: none"> <li>1. Showing fitness result or error.</li> <li>2. Click on menu button or exit.</li> </ol>

### 3.6 Flowchart

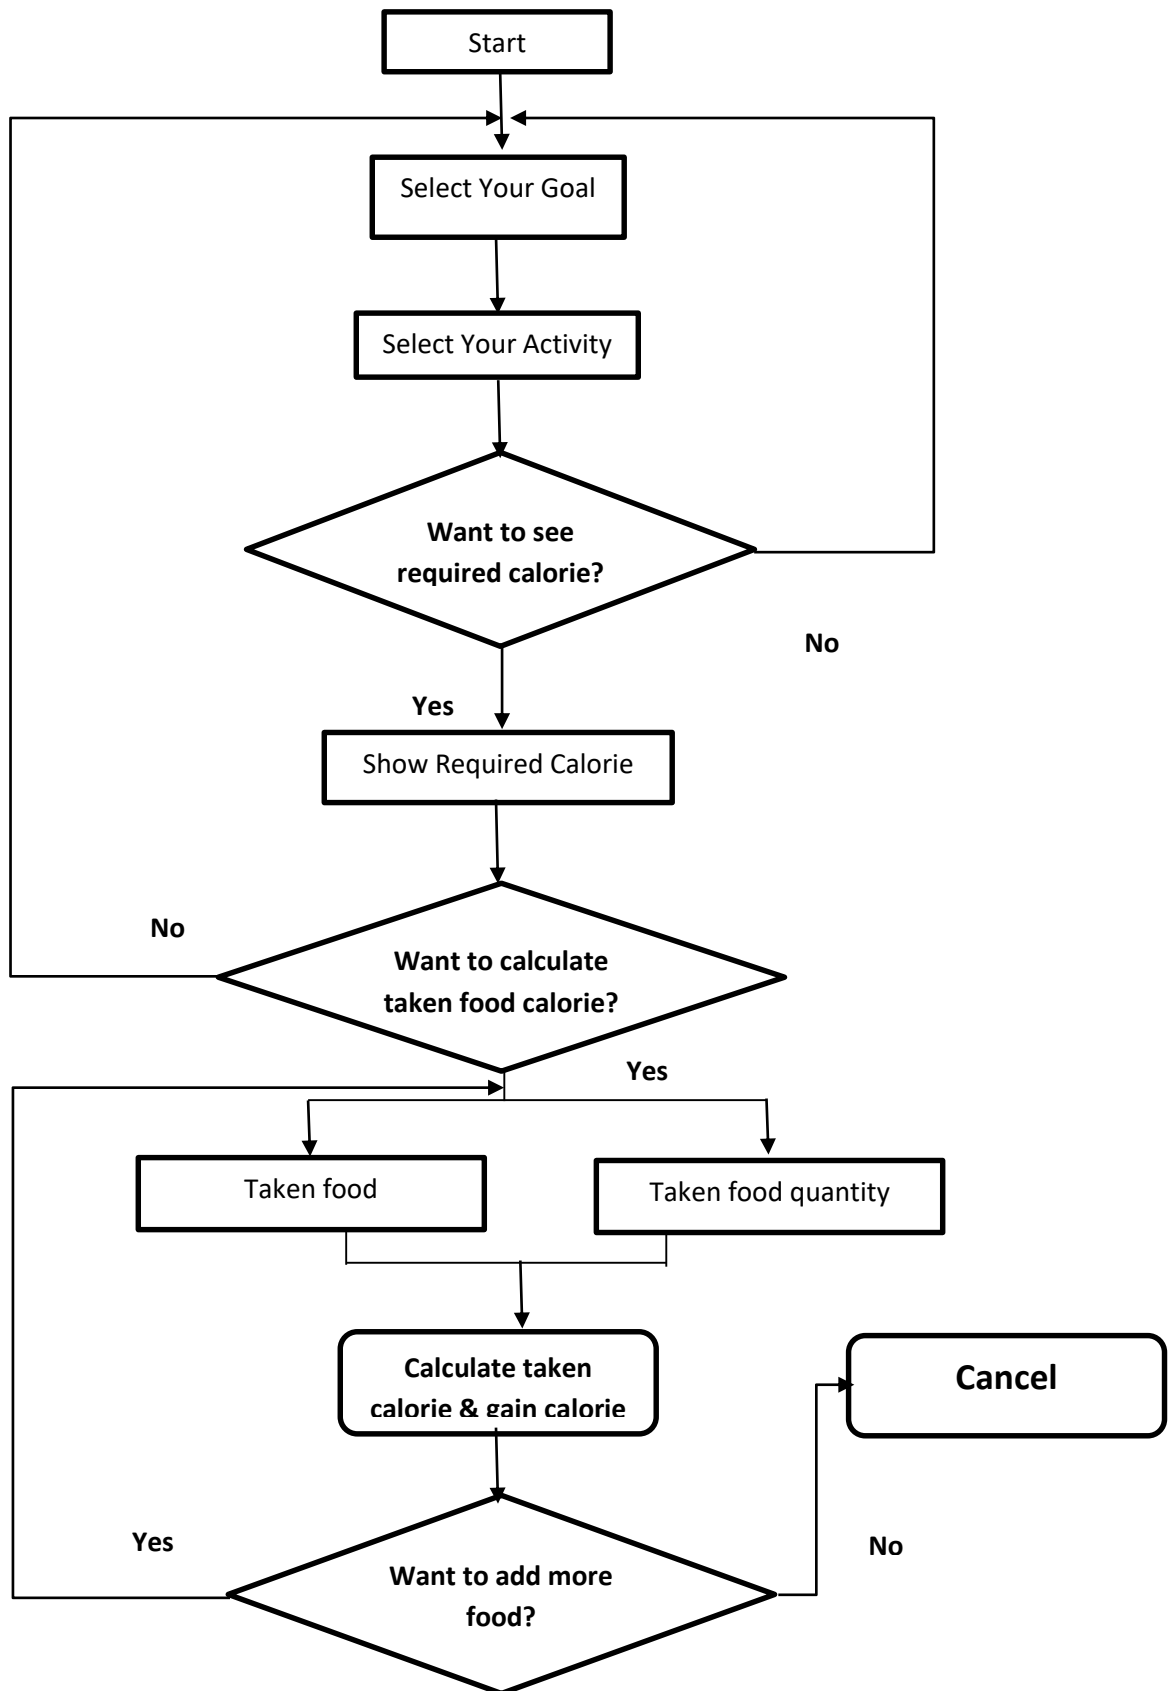

Figure 3.2: Flow chart diagram of our application.

# Chapter 4

## Design Specification

### 4.1 Front-end Design

Front end design is very necessary for all android application. Because front- end design is the sector that interacts with user. We are going to create an android application. So for a better user service the front end design is very important for an application.

Here is some of front-end design of our application given below-

#### 4.1.1 Home Page with Calorie Counter page

- Showing the system of the application for users.
- Users can view the menu option of the application.
- Users can also view the calorie counter option of the application.
- Users can also view the required calorie option of the application.
- User can also view the calorie chart on this page.
- Users can also reset the taken calorie from here.

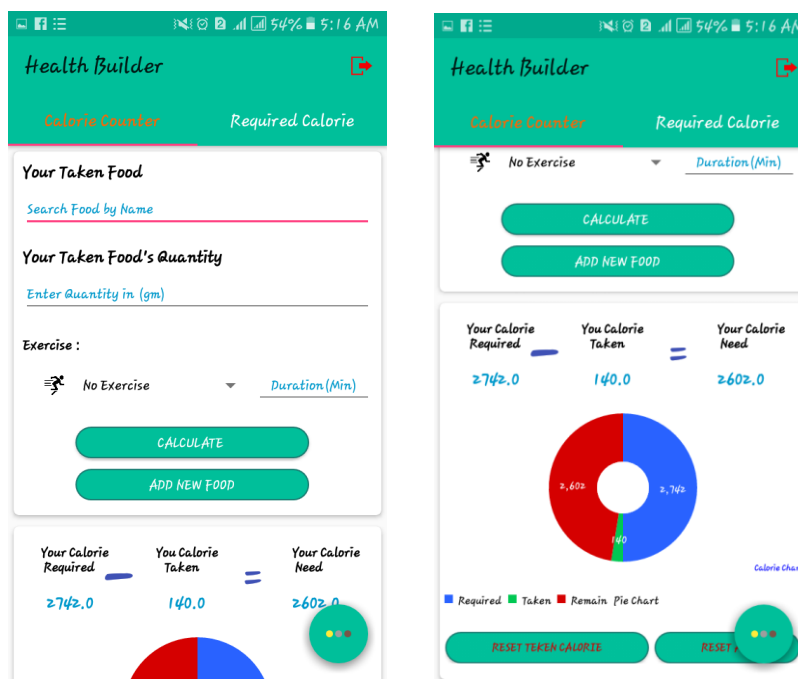

Figure4.1: Health Builder application home and calorie counter page.

### 4.1.2 Registration

- Must need to sign in with a valid email or
- Must need to sign in with a phone number or
- Must need to sign in with a valid google account.

Figure 4.2: Health builder sign in page.

### 4.1.3 Required Calorie page

- Gain, Maintain, Lose weight- user must select one of them.
- User can select their daily activity.
- User can calculate their required calorie from this page.

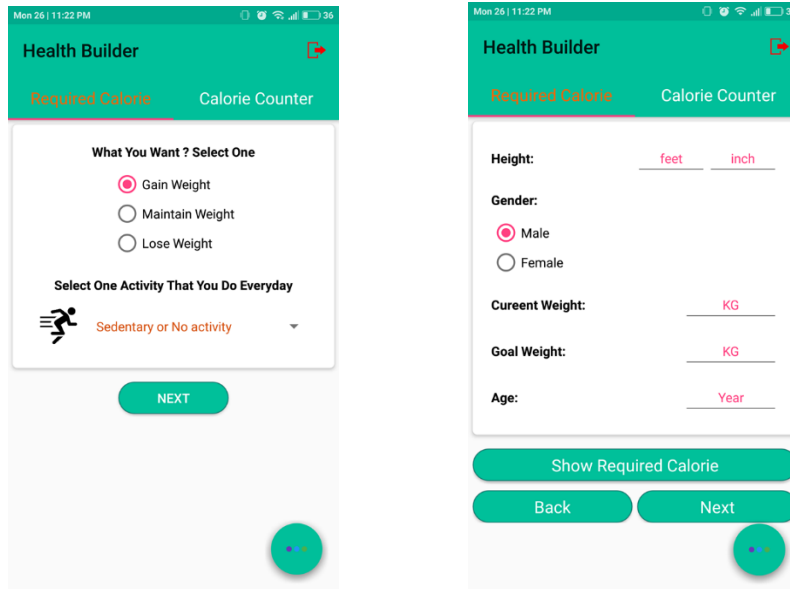

Figure 4.3: Health Builder required calorie page.

### 4.1.4 Menu option view

- User can view about us from this option.
- User also can view their profile from here.
- User also can calculate their fitness from here.

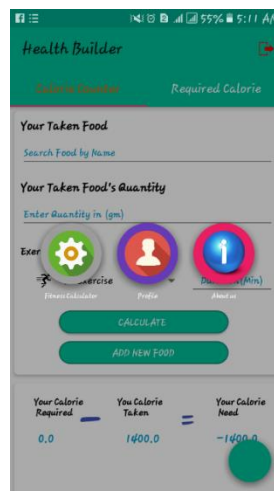

Figure 4.4: Health Builder required calorie page.

#### 4.1.5 Fitness calculator page

- User can calculate calorie & BMR from this page.
- User also can calculate body fat from this page.
- User also can calculate nutrition's need from this page.
- User also can calculate heart rate from this page.
- User also can calculate body mass index from this page.
- User also can calculate ideal weight from this page.

Figure 4.5: Health Builder fitness calculator page.

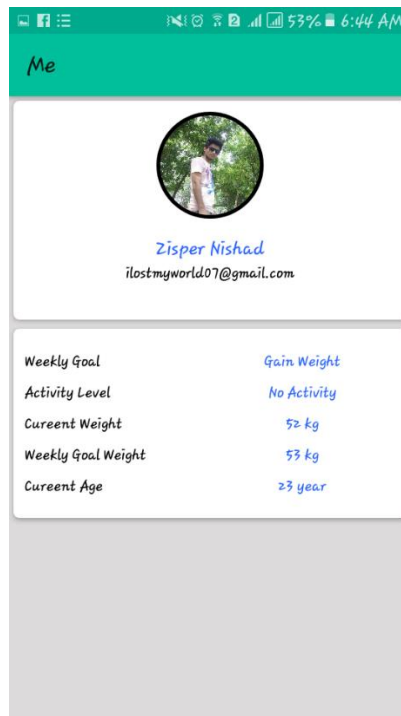

Figure 4.6: Health Builder user profile page.

## 4.2 Back-end Design

All applications has back end design for storing the data or information. We also used back-end design in our application. We create the database diagram for our application and showing it below:

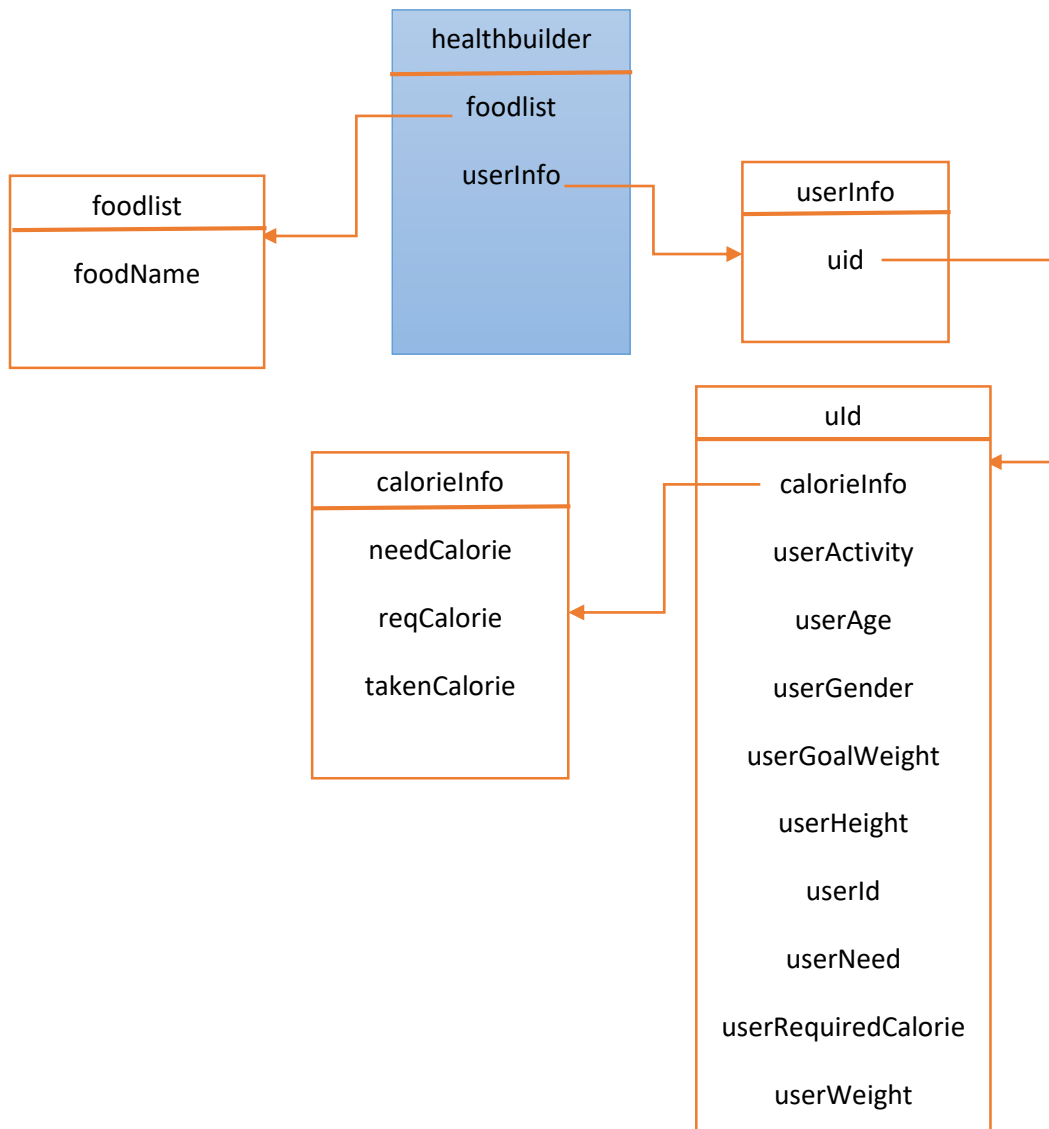

Figure 4.7: Health Builder database diagram.

### 4.3 Implementation Requirements

Every web applications has the implementations requirements to implement the applications. We also have used some implementation requirements in our application.

#### Requirements:

3. Used programing languages such as Java, xml etc.

4. Firebase server and android studio.

We used Firebase database connection, and android studio for

Raw coding.

5. A valid email or phone number or google account.
6. By the email or phone or google account we will confirm the sign in system.
7. Need an android mobile or tablet for using the application.

## Chapter 5

### Implementation and Testing

#### 5.1: Implementation of database

The implementation of database is the stored of user information system. Implementation of database is the process of installation of database application. It is the design of database and requirements of identification. We use Firebase database for our application. It is a real time database. The Firebase Realtime Database is a cloud-facilitated database. Information is put away as JSON and synchronized in realtime to each associated client.

---

[healthbuilder-e9589](#) > [foodlist](#)

```
foodlist
├── apple: 44
├── banana: 65
├── cherry: 50
├── chicken: 200
├── fish cake: 200
├── honey: 280
├── jam: 250
├── melon: 280
├── rice: 140
└── tomato: 200
```

Figure 5.1: Data base design of food List.

##### 5.1.1 Food List

Food list database stored the all good food name and calorie. When a user want to calculate the food calorie this time the application take the foods calorie from the database.

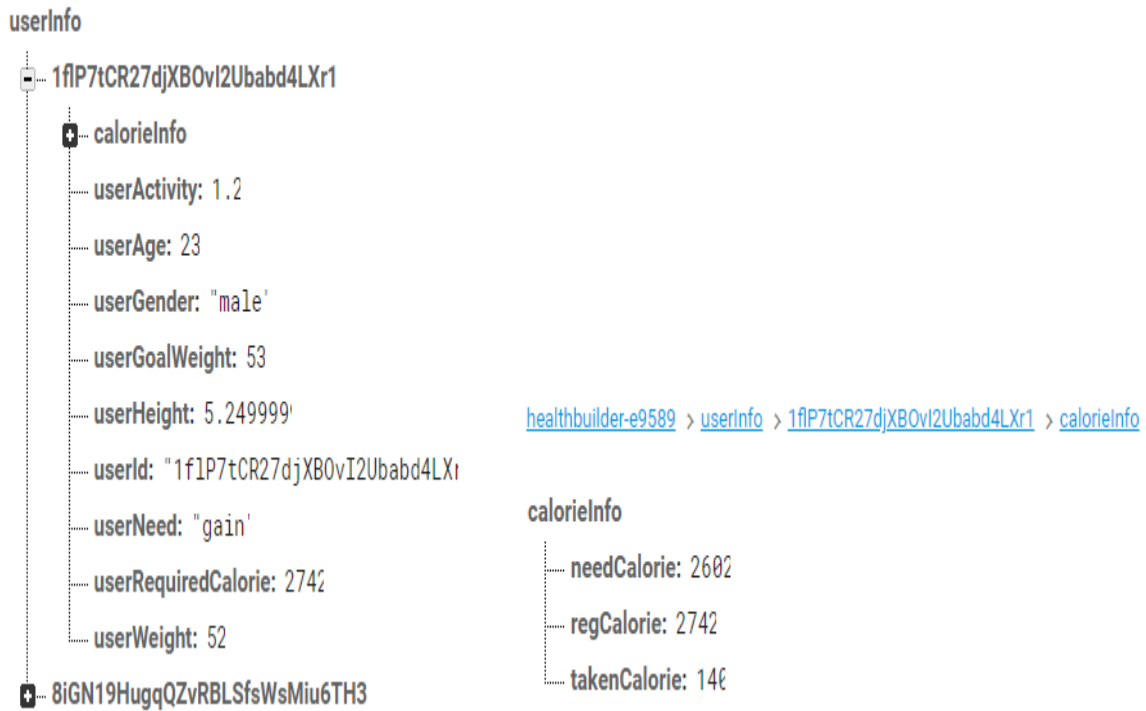

Figure 5.2: Data base design of userInfo and calorieInfo.

### 5.1.2 User Info and Calorie Info

User info database store all required information of user and calorie info store needed calorie, required calorie and taken calorie for user.

### 5.2 Implementation of Front-end Design

We have tried to better front-end design in this project and implementation. We used xml, Photoshop that's makes the better user interface. We want to make the user friendly design in our project. So that all user can easily use it.

## 5.2.1: Overview of pages and Description

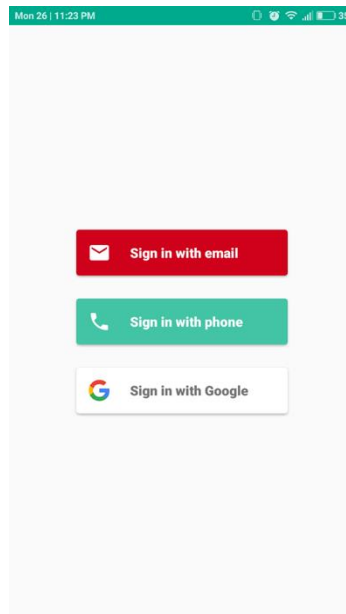

Figure 5.3: Health builder sign in page.

This figure is Health builder user sign in page. Any person can be sign in in our application. Must be valid information need for successful sign in. Without email or google or phone verification code user can't successful registration completed.

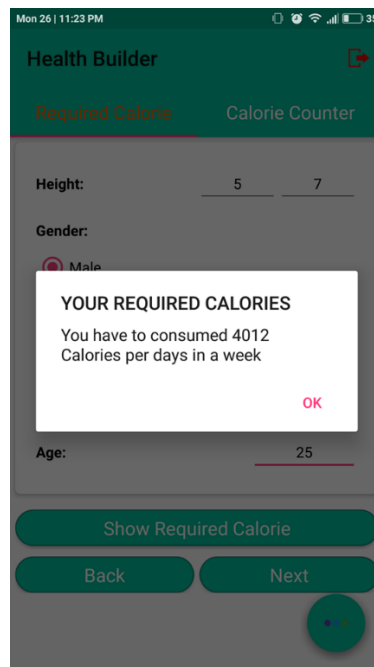

Figure 5.4: Health builder application required calorie calculate.

This figure is Health builder application required calorie page. Using it user can calculate their required calorie.

### 5.3 Testing Implementation

Testing implementation is the process of an action for the formulated plan. We are testing multiple parts in this system. That's requirement is installation, configuration, customization, running and user training necessary are implementation of testing.

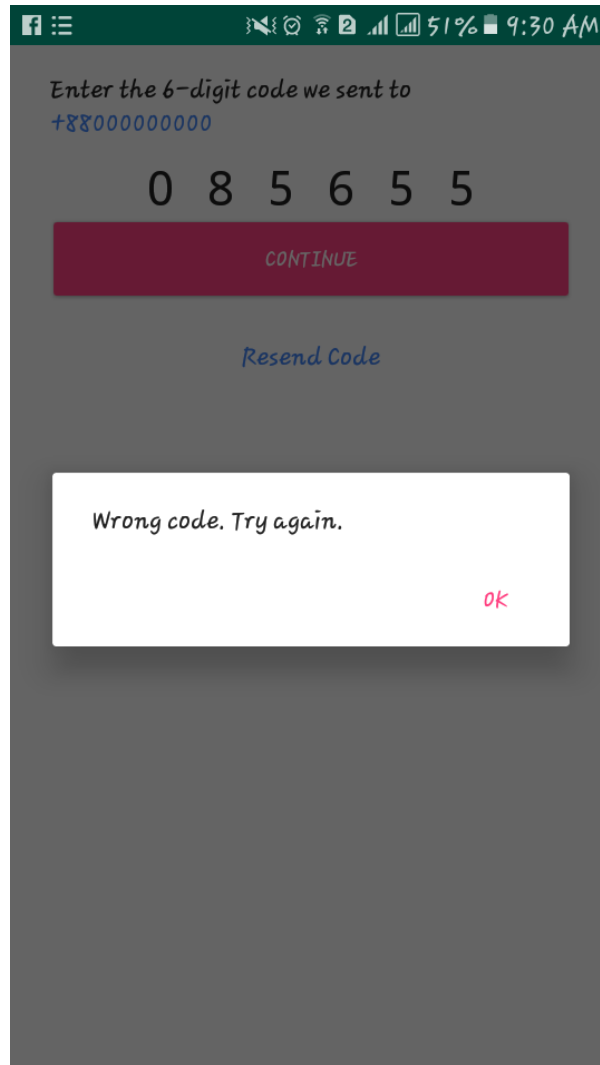

Figure 5.5: Wrong code input on sign in form.

The page is phone number verification of good health applications. When a user returns a wrong code then show the verification is failure.

In this page an old user enter wrong password, that's why the system shows "Incorrect password".

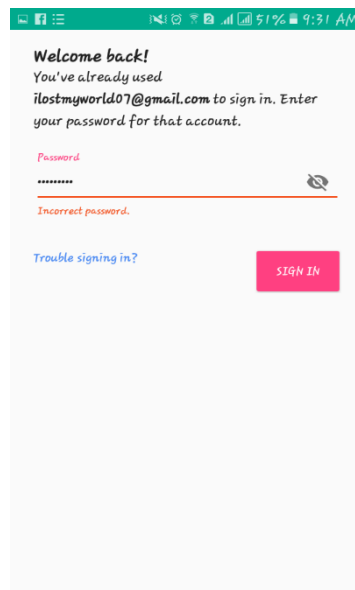

Figure 5.6: Health builder sign in page.

In this figure user enter invalid input, and blank some specific place where need to enter valid info, that's why on this application are showing notification.

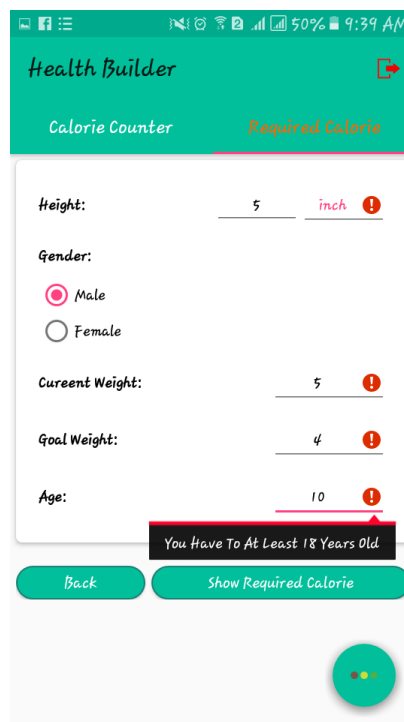

Figure 5.7: Invalid input for calculating required calorie.

## 5.4 Test Results and Reports

Table 5.1: Test Case Table for Health Builder.

Test Case	Test Input	Expected Output	Actual Output	Result	Tested On
1.Display The application pages	Tested some android OS mobile phone- ❖ Samsung ❖ MI ❖ OPPO	To display the Pages successfully	Displayed the pages successfully	Passed	19-03-18
2. Sign in without Gmail, mobile, Google.	Blank or Incorrect Address.	Google or Gmail account must entered	Showed the Warning	Passed	19-03-18
3.Password	Blank or Incorrect password	Password or correct password must entered	Showed the Warning	Passed	19-03-18
4.Required calorie count	Blank or wrong input on some required space.	Fill-up or input specific data.	Showed the Warning	Passed	20-03-18
5. Sign in without verify mobile number.	Blank or wrong input.	Fill-up or input given code.	Showed the Warning	Passed	20-03-18

## Chapter 6

### Conclusion and Future Scope

#### 6.1 Discussion and Conclusion

The application has been successfully implemented. After connecting with the application through the firebase server overall features and functionalities work fine. This application's workflow and responsive design is user friendly. We have encouraged and took initiatives to develop this application because many peoples need this application in their day to day life. This project is meant for describing all the features and procedures that were followed while developing the application. This document specially mentions the details of the project how it was developed, the primary requirement, as well as various features and functionalities of the project and the procedures followed in achieving these objectives.

#### 6.2 Scope for Further Developments

- ❖ Our mission is to make this application for all platform like Windows, IOS.
- ❖ Our application's data needs more storage in future, so we will add this with larger database system such as Oracle Database.
- ❖ We will add more advance features to make it more dynamic to satisfy user.
