APPROVAL

This Internship titled “**Front-End Web Design and Development**”, submitted by **Nur Jannat**. ID:142-15-3753 to the Department of Computer Science and Engineering, Daffodil International University, has been accepted as satisfactory for the partial fulfillment of the requirements for the degree of Bachelor of Science. In Computer Science and Engineering and approved as to its style and contents. The presentation has been held on 5th May 2018.

BOARD OF EXAMINERS

Dr. Syed Akhter Hossain
Professor and Head

Department of Computer Science and Engineering
Faculty of Science & Information Technology
Daffodil International University

Chairman

Dr. Sheak Rashed Haider Noori
Associate Professor & Associate Head

Department of Computer Science and Engineering
Faculty of Science & Information Technology
Daffodil International University

Internal Examiner

Md. Zahid Hasan
Assistant Professor

Department of Computer Science and Engineering
Faculty of Science & Information Technology
Daffodil International University

Internal Examiner

Dr. Mohammad Shorif Uddin
Professor

Department of Computer Science and Engineering
Jahangirnagar University

External Examiner

DECLARATION

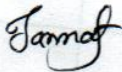

We hereby declare that, this project has been done by us under the supervision of **Naziour Rahaman, Lecturer, Department of CSE**, Daffodil International University. We also declare that neither this project nor any part of this project has been submitted elsewhere for award of any degree or diploma.

Supervised by:

NaziourRahaman
Lecturer, Department of CSE
Daffodil International University

Submitted by:

ACKNOWLEDGEMENT

First I express my heartiest thanks and gratefulness to almighty Allah for His divine blessing makes us possible to complete the final year project/internship successfully.

I really grateful and wish my profound my indebtedness to NaziourRahaman, Lecturer, Department of CSE Daffodil International University, Dhaka. Deep Knowledge & keen interest of my supervisor in the field of “Front end Design and Development” to carry out this project. His endless patience, scholarly guidance, continual encouragement, constant and energetic supervision, constructive criticism, valuable advice, reading many inferior draft and correcting them at all stage have made impossible to complete this Internship.

I would like to express my heartiest gratitude to **Dr. Syed Akhter Hossain, Professor and Head**, Department of CSE, for his kind help to finish my internship and also to other faculty member and the staff of CSE department of Daffodil International University.

I would like to thank my entire course mate in Daffodil International University, who took part in this discuss while completing the course work.

Finally, I must acknowledge with due respect the constant support and patients of my parents.

ABSTRACT

In this internship period in my daily life I have learned the concept of the Front end design and development. To develop a website there are several programming languages that are in use. Some of them are only used for the frontend and some backend design of the software. For example- HTML3, HTML4, HTML5, CSS, Bootstrap Framework etc. There are also some other programming languages that are used to develop the dynamic functions of the website. For example-PHP, Java etc. nowadays there are also some framework's that uses vastly. It is very helpful for our daily life. That is why I choose subject of my report is "**Front end Design and Development**". Working inSOFTPIDERadded huge experiences in my upcoming career. Solving real life problems was another key issue. This report takes us through all the details of Front end Design and Development knowledge and experience gathered during this internship period.

CHAPTER 1

INTRODUCTION

1.1 Introduction

Design & Development is the most important part of any kind of official work. From the beginning were paper based. It's a lengthy process, it kills all valuable time. In 21st century, where most of the people are connected with internet, it's high time to change the applications systems. I work with HTML5, CSS, CSS3 and BOOTSTRAP. I do many problems and solve them in my internship period. Firstly I work with Webpage design and development and other work like front end design, and responsive web design and development.

Here in this report I discuss about my work, experiences and other objectives during the internship period.

1.2 Objective

My main objective in this internship is to learn the basic things about the HTML, CSS, and BOOTSTRAP. Internship is about to do the or something like a job training. It gives us the real experience about the job sector. I am lucky about that I work with SOFTPIDER are reputed soft firm here we have work as an intern. Their goal is to train me and make me eligible for the job market. It is well known for their services and the relationship making between their customers. It's a good work place and good for the intern student because they get at a time training and job sector experiences. It benefited us both of the sides.

1.3 Motivation

As I work with SOFTPIDER here I learn about webpage design and development. They motivate me to build up my career into webpage design and development. As I am lucky to get training from them and work with them. As though I work with webpage design and development here I discuss about my motivation into webpage design and development. In the world of webpage design and development I have HTML, CSS, Bootstrap, basic JavaScript, and PHP. but my main work is with webpage design and development. PHP is free and open source. Here one can do at his heart content and he gets Webpage design and development is not only the programming language but also it is well known and most widely used. There is a wide scope for

webpage design and development a days. So why don't I get that opportunity. In the whole world web page design and development is a big marketing and market for programmer and computer engineer. In SOFTPIDER I get all the facilities and work environment and also get the opportunity to build of my career. It provides all Linux based work and courses and as an internee I get all of this from them. So it motivates me so much to build up my career into Webpage design and development.

1.4 About the Company

I finished my internship from the very reputed it company name SOFTPIDER LTD. is a professional Software Development & Web Solutions provider Company of Bangladesh founded in 2012 and managed by a group of professionals. It offers wide range of Business Solution along with Management Consulting Service for corporates or individuals. It has wide experience of working on different Platform from Proprietary to Open Source along with several devise base. Company's main services include Offshore Software Development, Database Application Implementation and Maintenance. Web Application and Portal maintenance, Graphics Design work with onsite Support and service. SOFTPIDER is a professional Software Development & Web Solutions provider Company of Bangladesh founded in 2012 and managed by a group of professionals. It offers wide range of Business Solution along with Management Consulting Service for corporates or individuals. It has wide experience of working on different Platform. Company's main services include Offshore Software Development, Online Newsportal, Ecommers Application, Mobile Application, Cloudhosting, SEO Services, Digital Marketing etc. Here also student got the change to finish their Internship term.[1]

1.5 Internship Goals

1. Knowing practical knowledge about programming.
2. Gain knowledge about HTML, CSS, Bootstrap, JavaScript, PHP etc.
3. Increase communication skill with other.
4. Gain essential background knowledge.
5. Works well with others.
6. Develop research skills.
7. Improve administrative skill.

8. Increase the capability for solving the problems.
9. Knowledge of professional association's activities.
10. Knowledge of professional journals and newsletters.
11. Knowledge of key professional.
12. Improve professional ethics and values.
13. Improve technical skill.

1.6 Report Layout

In my report I have discussed all basic concepts of Front end design and development in chapter 1. In Chapter 2 I have given brief description about the IT Company and its offered services and also the company's roles in the job market. It's very important for this report content because I take my internee from a very reputed company and I have given detailed description of that company. In chapter 3 I have added about a short note about problem and solutions of Web page Design, and testing. I have given the detailed description about my assigned Responsibilities, work Environment and perform tasks in chapter 4. In chapter 5 I have given the concluding remarks and also future scope of my work.

CHAPTER 2

ORGANIZATION

2.1 Products

In SOFTPIDER they give us various works to perform. There are many products provide inSOFTPIDER Company. Such as,

1. Software development
2. Web development.
3. PDA/ Smart Phone based application
4. SEO Services
5. Digital Marketing

2.2 Feature of Web page Design and Development

SOFTPIDER provides professional website design, development and maintenance services. Our skilled web designers and developers accomplish various website projects from brochure sites to multi-functional web portals. We are a one stop point for any websolution from Web page design and development, Logo designing, Theme design, BannerDesign, Brochure and Catalog design, Animation work, Image processing, databaserelated web solution and dynamic online store along with Maintenance and Hostingservices. SOFTPIDER has a large pool of resources and technical expertise to developwebsites of any complexity. We provide complete front-end and back-end developmentbased on the latest technologies (e.g. web 2.0) and industry trends. We follow W3standard for developing any web application, portal and sites and always ensures (SearchEngine Optimization SEO).

2.3 Responsibilities

SOFTPIDER is an IT Solution Provider Company managed by a group of professional. The Bangladesh wing of the company is indeed an Export oriented Software as well as Web Developer concern, which has also expanded its market locally through its experienced professional since the mid of 2012. It is a total solution provider in

Information Technology (IT) for local clients and abroad. It offers Automated Business Solution along with Management Consulting Service to serve the customer requirement from the very root level.

2.4 IT Services Offered

It offers wide range of Business Solution along with Management Consulting Service for corporates or individuals. Web Application and Portal maintenance, Graphics Design work with on-site Support and service. Domain solution and web hosting – This company provide domain service for a unique internet service. In World Wide Web no one can't use same name so it need unique name. If one have a business site on the internet so the domain name is ones internet name. It gives a unique looks to one's business.

2.5 ROLES IN JOB MARKET

In this company they trained the Web Page Design and Development professional course like HTML, CSS, basic PHP, JavaScript and BOOTSTAP. As an intern I trained in the basic things in Front end Design. Front end Design and Development is the world most platform. So there is huge space for do many things. It's a popular so huge scope for build ones career. Front end Design and Development are in now hot demand in job market. There is a high demand for professional Web Developer trained person.

CHAPTER 3

TASK PROJECTS AND ACTIVITIES

3.1 Training Attended

We know that all time training is very much important for us, here training is very important for internship period is the first stage, when an intern student faces any problem during internship, then it is mandatory to provide training for address the problem and find the solution. If problem has been identified & training can be solving the problem. The training can be described skills, concepts, gain knowledge to improved performance in internship environment. I was attend SOFTPIDER for my training.

Those training I was complete when I was attend SOFTPIDER.[3]

1. HTML3 , HTML5
2. CSS2 , CSS3
3. Bootstrap
4. JavaScript
5. Basic PHP

3.2 Assigned Responsibilities

In SOFTPIDER it they assigned us many work and responsibility. As I work here as an intern they also give me some works.As I work here for four month so they divided my work in a roster. In first day I work with the basic knowledge of Firstly I work with Webpage design introduction and then I start with the process called and other smallwork like font end design NetBeans installation process. In 3rd day after installation I create user information from account and get my password. As I tell you in SOFTPIDER. I have specific computers for each use.So it good to be having a user account.

Then I started with development and file directory. As the flow of time we finished all our webpage design and development based work.

3.3 Work Environment

The work environment in SOFTPIDERLTD is very good. As their policy is to make good relationship between the customers they maintain it through their employee as though their intern student. The instrument and the facility in SOFTPIDERLTD are very well established. They use all modern technologies and upgraded instrument. They trained us in a very ethical way. We all have one each computer. They have well decorated IT room with full security. At the end I can say that I am very lucky to finish my intern in such a company.

3.4 Work and Life Balance

SOFTPIDER gives us Work Life Balance. This company gives me balance between personal life and working time. This company gives me many sacrifice when I need help for my personal life. My off day at office they do not call me at office. This company having sense of balance will improve job satisfaction. For this reason all employee like this reason.

3.5 Recognition for Hard Work

This company helps me to understand organizational behavior management in professional life. This company encourages certain behaviors in a person. All employee gives their effort and its help us recognition for hard work SOFTPIDER give me know recognition for hard work.

3.6 Training and Development

SOFTPIDER give me training & development skills when change is more rampant ever before, it's necessary for organizations keep along with changes and train employees. This company manage many training session for the employee.

3.7 Potential Team Spirit

Normally we such support from our group and organization. For any organizations team work is most important. Its help find out a problem discuss together and also we can solve the problem. This type of work make unity and every employee working for that. Everybody working towards to achieve a bigger goal and works as a team. I was learning strong team spirit from SOFTPIDER.

3.8 Performed Tasks

Working that have been completed plus the completed portions of work packages already performed. This company I have many tasks performed in SOFTPIDER, those are given bellow.

1. Designing Different types of template
2. Working front end or back end of the web applications.
3. Working with their development team.
4. Software testing
5. Software maintain
6. Data collection
7. Develop different modules for the projects with the help of the programmingteam .

3.9 Implementation Tools, Software & Framework

After getting all resource available in the knowledge and skills about those materials, the following tools were selected to accomplish the project:

1. HTML5
2. CSS3
3. BOOTSTRAP
4. MySQL
5. APACHE
6. PHP
7. CODEIGNIER

now I will go to discuss all the tools, software & framework what I used.

HTML5

HTML5 is also mark-up language, which represent structures and contents and World Wide Web. This is another and the latest format of HTML having more qualities, features, tag etc. which made website to be created more attractive. This is made for user more comfortable on different browsers on different device.[5]

CSS

The first CSS specification has become an official W3C recommendation in December 1996. Some features of CSS are:

1. Font properties such as typeface and emphasis, color of text, backgrounds and other element.
2. Text attributes such as spacing between words, letters and line of text.
3. Align of text, image, table and other elements.
4. Margin, border, padding and positioning for most elements.
5. Unique identification and generic classification of groups of attributes.

CSS level 2 was developed by the W3C in May 1998, Superset of CSS, CSS2 includes a number of new capabilities like absolute, relative and fixed positioning of elements and z-index, the concept of media types, support for aural style sheets and bidirectional text and new font properties such as shadows.

CSS3

CSS3 is the latest version of CSS specification. But you cannot say directly that CSS3 is just a reference to new features of CSS, it's a third level in progress in the CSS specification. There are more features about CSS3 than CSS like additional selectors, drop shadows, rounded corners, and multiple backgrounds, animations, transparency and much more.

BOOTSTRAP

In the earlier days of Twitter, engineers face too much difficulty to scale and maintain their individual applications. Because they used almost any library they were familiar with to meet front-end requirements. They were looking for its solution to these challenges. Hence they quickly accelerated during Twitter's first Heckweek. By the end of Heckweek, they had reached a stable version which engineers could use across the company. Bootstrap has grown significantly to encompass basic styles, elegant and durable frontend design patterns with the help and feedback of many engineers. This release represents first public 1.0 release and the open sourcing of many months of hard work.[7]

Why Bootstrap?

Bootstrap is just thought CSS at its core, but it's built with a flexible pre-processor that offers much more power and flexibility than regular CSS. We gain a range of features like nested declarations, variables, mixins, operations and color functions; anyway, since Bootstrap is just purely CSS when compiled via less, I gain two important benefits.

Firstly Bootstrap is very easy to use like just dropping it in the code and go.

Second, once compiled, Bootstrap contains nothing but CSS, meaning there are no superfluous images, Flash, or JavaScript. All that remains is simple and powerful CSS for your web development needs.

Why It Works

Bootstrap usually works by providing a uniform solution to the most common, everyday interface tasks developers come across. At Twitter, it has become one of the most popular tools when starting new applications and sites. It's very extensive, easy and flexible to work for many unique design needs. And the popularity of Bootstrap has been enriched day by day.

PHP

PHP is actually a server-side scripting language. It stands for Hypertext Preprocessor. Early on its invention, it has been called personal home page. This is a powerful tool to make dynamic and interactive web pages, this is the widely used, free tool to make a website.

1. PHP is a widely-used, free, and efficient alternative to competitors such as Microsoft's ASP.
2. PHP code can be simply mixed with any other languages like HTML or various template engines or web frameworks.
3. PHP is the most popular web language to the developers for having a huge benefit of it.

There are many frameworks working with PHP. Besides Symphony, Zend, CodeIgniter are also popular now a days working with PHP code. Despite its popularity, no written specification or standard exists for the PHP language; instead, the canonical PHP

interpreter server as a de facto standard. However, work on creating a formal specification has started in 2014.[4]

3.10 Testing

Testing is a very important technique for assessing the quality of a software product. It is a process to analyze the existing and required condition of the system and to evaluate the features of the system. This activity should be done throughout the whole development process.

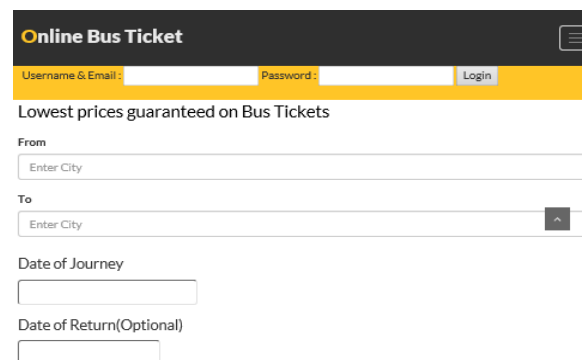

3.4.1 Testing Process

There are two basic classes of testing. The basic difference of these two classes, clarified by the definition below:

1. Off-white box testing or functional testing is the testing that ignores the internal mechanism of system and focuses on the output generated.
2. White box testing or structural testing is the testing that takes into account the internal mechanism of a system.

3.4.2 Some Templates

Use HTML, CSS & Bootstrap

The image shows a web form for booking an online bus ticket. At the top, there is a dark header with the text "Online Bus Ticket" and a menu icon. Below the header is a yellow bar containing input fields for "Username & Email", "Password", and a "Login" button. Underneath, a slogan reads "Lowest prices guaranteed on Bus Tickets". The main form area includes several input fields: "From" (with "Enter City" placeholder), "To" (with "Enter City" placeholder and a dropdown arrow), "Date of Journey", and "Date of Return (Optional)".

In this page is design for service details. When client login the site then shows the service detail page.

Responsive design

Design for large screen:

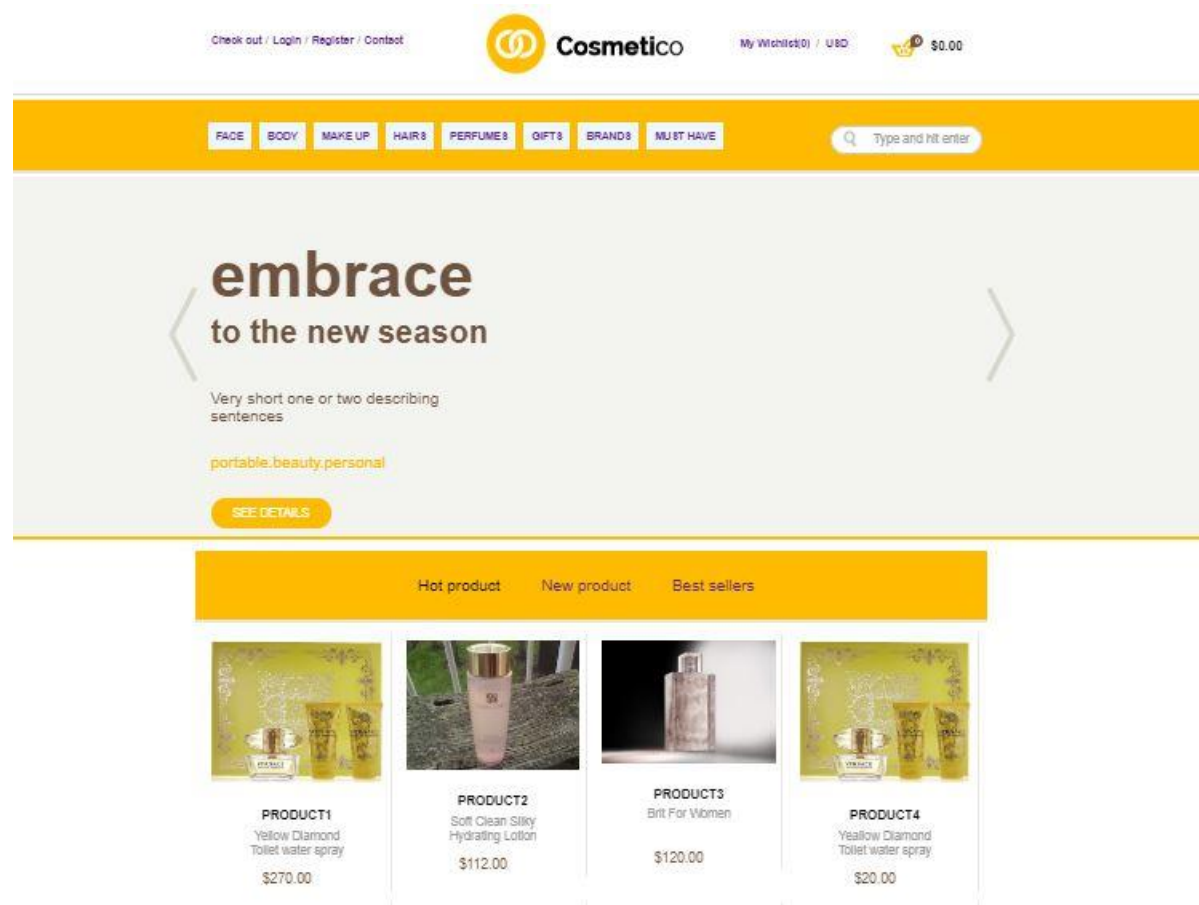

Figure 2.2: Cosmetic Shop Homepage.

In this figure create a responsive design. This is a cosmetic shop homepage design. This design is creating for desktop or laptop device.

Design for medium screen:

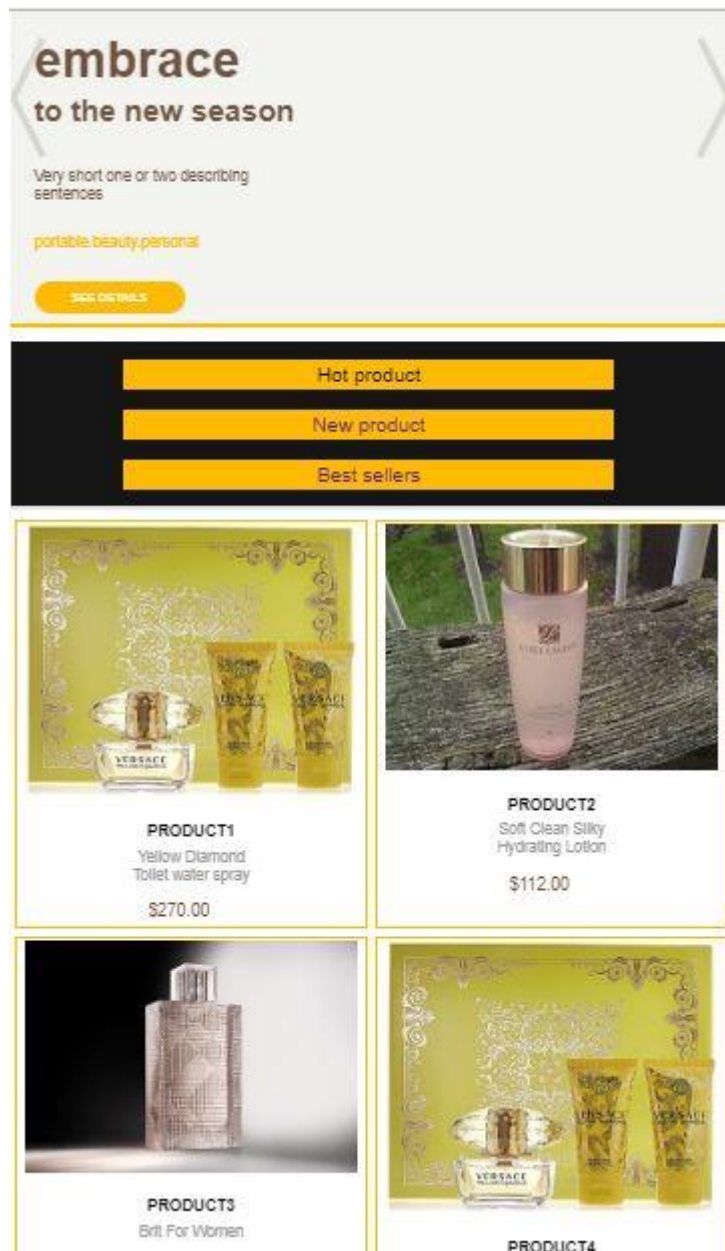

Figure 2.1.1: Product description page.

In this figure create a responsive design for medium device such as tablet Pc.

Design for Small screen:

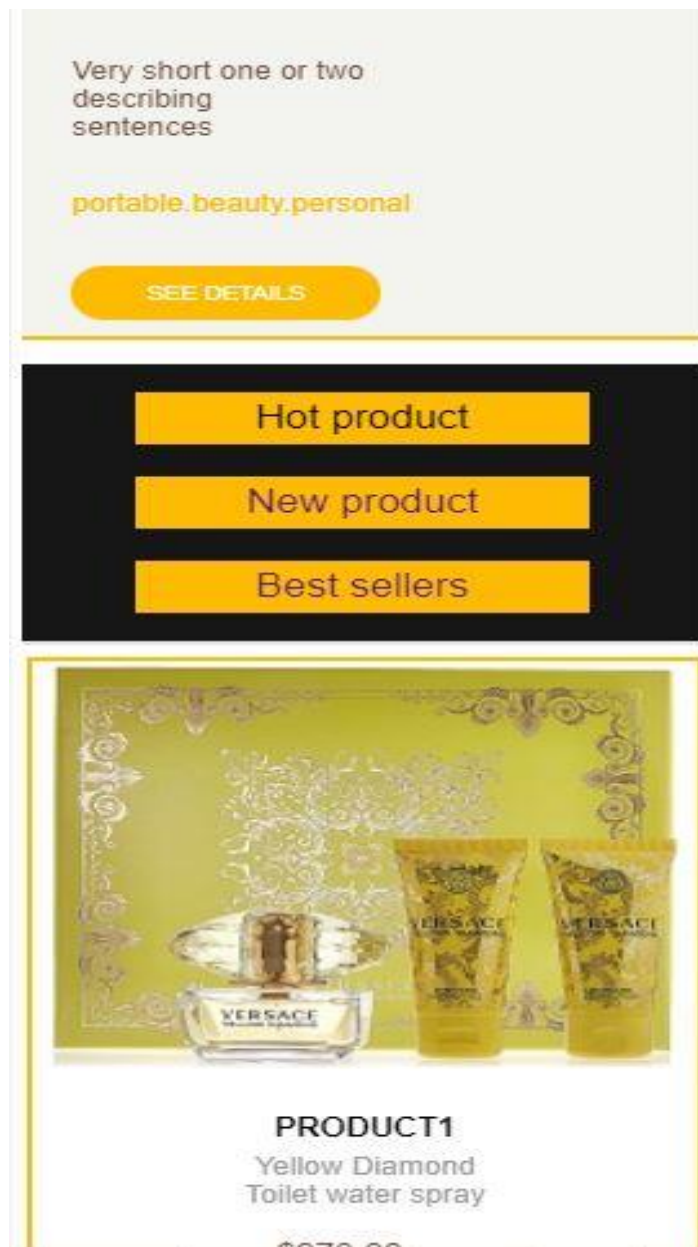

Figure 2.1.2Product description page.

In this figure create a responsive design for small device.such as smart phone.For this responsive design I use media query,HTML and CSS.

CHAPTER 4

INTERNSHIP OUTCOMES

4.1 PROBLEMS AND SOLUTIONS

I have an internship on web page design and development from SOFTPIDER. From this internship I can learn about basic command. The internship gives me the confidence for the future. Some problems were found during internship which are given below-

1. Database design and database normalization

Solutions: My team leader and project manager help me how to create, design, and diagram creation and complete.

2. MVC model and CI framework

Solution: It's very important to full knowledge about MVC model. Model View and controller. Code generator is this kind of framework. In their session is help me how it work and give me simple task for that. Complete a simple project using and this way my practical knowledge is clear.

3. Work with database and form

Solution: Using this framework attach the database and work with dynamic process.

4.2 LEARNING OUTCOMES

A learning outcome is the specification of what a student should learn as the result of a period of specified and supported study. Here are some examples.[2]

Technology and Analytical Learning Outcomes

1. Developing a technical artifact requiring new technical skills.
2. Using profession specific terminology appropriately.
3. Effectively utilizing a new software tool to complete a task.
4. Creating training materials.
5. Analyzing or visualizing data to create information.
6. Writing requirements documentation.
7. Selecting appropriate technologies.
8. Acquiring and evaluating information.
9. Creating or modifying technology policies.
10. Identifying and creating appropriate test cases for systems.

Professional Learning Outcomes

1. Exercising leadership.
2. Behaving professionally.
3. Behaving ethically.
4. Listening effectively.
5. Dressing appropriately.
6. Addressing colleagues and superiors appropriately.
7. Allocating time effectively.
8. Teaching others.
9. Adapting effectively to changing conditions
10. Developing appropriate workplace attitudes.
11. Understanding and managing personal behavior and attitudes.
12. Developing individual responsibility.

4.3 CHALLENGES

In 21st century we have many challenges. There is h professional and they have many skills. So to stay on this job market one need to have extra course and certification. In this case PHP, HTML, CSS, JavaScript and BOOTSTAP etc. certification and training gives you an extra spice. Now a day there is huge demand in programmer Development certification. It open many scope to build ones career. For this

curriculum in Bangladesh there is a huge scope to get certification and training. So if one want to build his career in development need to all this certification and training. Al the end one is ready to build his career and have the confident to fetch new challenges.Though Challenges Ecommerce have many problems. Like,

1. Implementing a content marketing strategy

Although content marketing has been a buzzword in recent years, not many online businesses know how to implement it effectively. In fact, only 42 percent of B2B marketers believe they are effective with their content marketing efforts.

2. Building trust through your website

Especially for e-commerce businesses, your website is the very first impression customers have of your product. If you have a poorly designed website, there's a high chance you'll lose traffic and even customers.

3. Using big data to gain insights on customers

Big data is a growing trend in e-commerce and online marketing. Big data enables businesses to gather insights about their customers through monitoring their purchasing habits and decisions.

4. Integrating mobile into your website

Research shows mobile shopping accounts for nearly one-fourth of online purchases. Last year, mobile commerce sales reached \$4.7 billion in the second quarter. Although mobile commerce is growing; there are not enough online retailers who are adapting to these trends. For those who fail to optimize their shopping experience, they will fall behind in online sales. Every e-commerce business has its unique challenges, however, these are some many face. By taking note of these challenges, even the smallest online business can become successful and continue to grow in the upcoming years.

CHAPTER 5

CONCLUSION AND FUTURE CAREER

1.1 Discussion and Conclusion

In this site I work with Codeigniter framework. Which work in MVC model. MVC means model view control. This work is help me to progress in logical and fundamental increment of my work process. I work with bootstrap for the responsive site design. HTML5 for advance level work and PHP sever site language for light waste my work in live. I complete this data base and wrote all of my query in model. This work help me to increase my database knowledge. Any kind of PHP logical or scintecticl problem can solve using this server language. It's very good luck for me that I work with project. All in all I improve my logic, database knowledge and front end design. Not only frontend design but also complete my back end design, diagram, apply. After complete my project I am completely get many kind of experience in programming. And I hope its need to my future.

1.2 FUTURE SCOPE

My aim is to integrate this application with the site of Front end Design and Development for the service so that the people will be highly benefitted because of having real time data about the scope. I want to add some features in this application. The project has been done doesn't mean that it's just a start of this project. Hence there are some plans too to develop it later. Hopefully the system will be updated regularly as user requisition. And I always, will try to make this project better and better so that this system can be one of the easiest online systems to use for all kind of users. To work with a dynamic and free stable software and also in a challenging environment where there is an opportunity of self-improvement technique, individual and group based work that create ultimate leaders who lead the job market and gives one this opportunity. It is good to develop and rise in high for a person or for an organization to go in such a high scope.

So the future scope and opportunity in build career in PHP, HTML, CSS, and BOOTSTAP. From Bangladesh is very high. So if one wants to go his aim point get trained in PHP Codeigniter frame work. And get the certificate to fetch success.

APPENDICES

Internship Reflection

An understudy to get the handy involvement in the field of designing. It is help to increase involvement in building work. In assistant period I learned web page design properly and responsive based web design. The experience help to me be a a solid candidate in work showcase. This understudy helps to give learning my work properly. Understudy give properly traps and trips that are rehearsed by the expert. I allot different venture, now I know how to oversee web design task and how to defeat basic circumstance. Last getting the experience to take a shot at an expert group.
