LINUX SYSTEM AND NETWORK ADMINISTRATION

BY

MD.ABDUL AZIZ ID: 142-15-4142

This Report Presented in Partial Fulfillment of the Requirements for the Degree of Bachelor of Science in Computer Science and Engineering

Supervised By

Dr. Fernaz Narin Nur Assistant Professor Department of CSE Daffodil International University

Co-Supervised By

Ms. Nazmun Nessa Moon Assistant Professor Department of CSE Daffodil International University

DAFFODIL INTERNATIONAL UNIVERSITY DHAKA, BANGLADESH MAY 2018

APPROVAL

This Internship titled "Linux System and Network Administration", submitted by Md.Abdul Aziz ID: 142-15-4142 to the Department of Computer Science and Engineering, Daffodil International University, has been accepted as satisfactory for the partial fulfillment of the requirements for the degree of Bachelor of Science in Computer Science and Engineering and approved as to its style and contents. The presentation has been held on 6th May 2018.

BOARD OF EXAMINERS

Dr. Syed Akhter Hossain Professor and Head Department of CSE Faculty of Science & Information Technology Daffodil International University

Dr. Sheak Rashed Haider Noori Associate Professor and Associate Head Department of CSE Faculty of Science & Information Technology Daffodil International University

Callt

Md. Zahid Hasan Assistant Professor Faculty of Science & Information Technology Daffodil International University

Dr Mohammad Shorif Uddin Professor Department of CSE Jahangirnagar University **Internal Examiner**

Chairman

External Examiner

DECLARATION

I hereby declare that, this internship report is prepared by me, Md. Abdul Aziz to the department of Computer Science and Engineering, Daffodil International University. Under the supervision of **Dr. Fernaz Narin Nur, Assistant Professor, Department of CSE,** Daffodil International University.

I also declare that neither this internship report nor any part of this internship report has been submitted elsewhere for award of any Degree or Diploma. I also declare that, I collect information from Daffodil Online Limited (DOL), Data Center and Internet Service Provider (ISP) Based Company, Books and Internet.

Supervised by:

Dr. Fernaz Narin Nur Assistant Professor Department of CSE Daffodil International University

Co-Supervised By:

Ms. Nazmun Nessa Moon Assistant Professor Department of CSE Daffodil International University

Submitted by:

Bren

Md. Abdul Aziz ID: -142-15-4142 Department of CSE Daffodil International University

ACKNOWLEDGEMENT

First I express our heartiest thanks and gratefulness to almighty God for His divine blessing makes us possible to complete the final year project/internship successfully.

I really grateful and wish my profound indebtedness to **Dr. Fernaz Narin Nur, Assistant Professor,** Department of CSE Daffodil International University, Dhaka. Deep Knowledge & keen interest of supervisor in the field of "Linux System and **Network Administration**", to carry out this internship. Her endless patience, scholarly guidance, continual encouragement, constant and energetic supervision, constructive criticism, valuable advice ,reading many inferior draft and correcting them at all stage have made it possible to complete this internship.

I would like to express our heartiest gratitude to **Dr. Syed Akther Hossain**, **Professor and Head, Department of CSE**, for his kind help to finish my internship and also to other faculty member and the staff of CSE department of Daffodil International University.

I would like to thank our entire course mate in Daffodil International University, who took part in this discuss while completing the course work.

Finally, I must acknowledge with due respect the constant support and patients of our parents.

ABSTRACT

Linux is, in simplest terms, an operating system. It is the software on a computer that enables applications and the computer operator to access the devices on the computer to perform desired functions. The operating system (OS) relays instructions from an application to, for instance, the computer's processor. The processor performs the instructed task then sends the results back to the application via the operating system. The medium or large size organizations need a server system to maintain their complex IT infrastructure. Peer-to-peer networks make problematic in the way of security and resource sharing for medium or large size organization. As the server is little expensive, here I try to design a cost effective server system of this type of organization. This system provides almost all the service need by an organization to maintain their infrastructure. This system increases reliability and network security for their network. The organization which wants to adopt this system can easily use this system for its reliability rather than other systems present in the market. This design is implemented using VMware Workstation 10.0 and CentOS 6.5. After implementation of all service, this system is tested in different stages and it works successfully as a prototype. In the future I need to improve centralize login system to get better performance for windows users.

CHAPTER 1 Introduction

1.1 Introduction

The Daffodil international university has a nice opportunity that was the internship system. We get it on the last semester. I want to say that on this internship system I get a large amount of practical experience. It is my big challenge to prove me, in any time anywhere in any place. The full system support given by daffodil online ltd. On that company I want to gather a large technical knowledge. For that region I want to say that I was very proud of me to get Daffodil international university.

1.2 Motivation

I am currently pursuing my Bachelors in Computer Science Engineering at Daffodil International University, I understand the importance of gaining practical knowledge which will complement the textbook knowledge and help a student gain a wider perspective of the subjects. The IT enabled organizations are highly needed server to better manager business-critical information, sharing file, protect data by making backup for employee and clients. When an organization has 9 to 10 users in his networks then he need really consider investing a network server. Using windows it is really expensive to setup this type of system. So I use a free Operating System CentOS to setup this system to make this cost effective. Moreover Linux has own secured Kernel to protect it from Virus so we not need to buy antivirus to protect our system. For this reason I am using Linux to implement this system.

1.3 Internship Objectives

Ultimate objective of my internship program is to prepare myself as an eligible one in the competitive job market. So this is very effective of skill development. I would like to gather some extraordinary quality to provide myself as skilled one.

The internship in computer science is designed to provide work experience while students are still in school, to coordinate job experience with academic training, and to help student to make the transition from classroom to job. Self motivated and selfdirected a desire to work.

1.4 Introduction to the Company

Daffodil Online Ltd. prides itself as one of the leading nationwide Internet Service Provider (ISP) in Bangladesh. They are the most experienced and oldest company in the ICT field where they are basic business ethics is Long Term Relationship with they are customers. As we look at the growth over the decade since our inception, they are extremely proud of what they have achieved, and even more excited about they are outlook for an equally promising future.

It may please you to know that they started they are operation in the year **2002**. During the past years, they extended they are operation and service portfolio according to the customer's recommendation and considering demands of time. They worked with many national projects and international organizations and achieved the reputation. They are using the latest technologies and upgrading the services wherever it is required. They are Corporate Network Solution department is capable to provide state-of-art network and telecommunication solutions with a highly efficient technical expertise group.

1.5Report Layout

In the chapter (1) I have described objective of internship, Motivation of internship and Introduction to the company.

In the chapter (2) I have described the methodology of my internship. And this chapter gives the information about where the internship has been attached to undertake this program. Also included about how did perform the internship works, about the company, what are the IT service offered in DOL and what are the roles of in jobs market of Linux.

In the chapter (3) I have described about daily task and activities, Events and Activities and Challenges.

In the chapter (4) I have described is Competencies Earned, Smart Plan, Reflections.

In the chapter (5) I have described is Conclusion and Future Scope. I discuss Future Scopes of Linux and write conclusion.

CHAPTER 2

Organization

2.1 Introduction

Daffodil Online Ltd. (DOL) is proud to be one of the trailblazers and oldest ISP/ASPs in Bangladesh and providing one stop integrated ICT services and solution since July 2002. It has its own Fiber Optic & Radio Link WAN infrastructure to serve corporate, SME and individual clients. The institute worked with many national projects and international organizations with high appreciation from all concerned. It using the latest technologies and upgrading the services wherever it is required.

The centers Corporate Network Solution department is capable of providing state-ofart network and telecommunication solutions with a group of highly efficient technical experts. DOL has a very strong professional engineering and management team certified and associated with SUN, Cisco, Microsoft, Linux, and Oracle and actively involved with world leading computing associations including IEEE, ACM, ACS, BCS, and PMI. Its Corporate Social Responsibility ethos strengthens the sense of responsibility on Community, Workstation, Location and Market place. As a Group concern, DOL promotes 3 major platforms e.g., education, nation-building and environment, through its programs and services [1].

2.2 Product and Market Situation

Daffodil Online Ltd. prides itself as one of the leading nationwide Internet Service Provider (ISP) in Bangladesh. They are the most experienced and oldest company in the ICT field where they are basic business ethics is Long Term Relationship with the are customers. As they look at the growth over the decade since our inception, they are extremely proud of what we have achieved, and even more excited about our outlook for an equally promising future. Daffodil Online Ltd also provides different IT Services and Professional Training services. These are given below.

➢ IT Services

- Corporate Internet Solution
- Security solution.
- Domain registration and web hosting.
- Website development.
- Open source application solution.

- Internet Service Provider
- State of the Art Data Centers.
- Hi speed Wi-Fi Zone.
- Data Connectivity, Data center& Co-Location.
- Bulk SMS Service.
- Proxy & DNS Server solution, Mail Server Solution.
- And All computer accessories
- Professional course and trainings:

Professional Training Services

- ISP Setup and administration using Linux.
- Training Course on Certified Ethical Hacking (CEH).
- ISP Setup and Administration using MikroTik.
- Web site Development with Joomla.
- PHP and MYSQL for Website Development.
- E-commerce & Open source Joomla Virtue Mart.
- Red Hat Certified Security Specialist (RHCSS).
- Red Hat Certified Engineer (RHCE).

2.3 Target Group

The company's customer base includes all consumers and all small- to medium-sized businesses, including start-ups. The company plans to concentrate on SOHO clients, as these are perfect targets for our new high-speed offerings, and hold the greatest growth potential for the company. Web Solutions feels that these market segments have special pricing and service needs, and make more dedicated, reliable customers.

2.4 SWOT Analysis

SWOT Analysis is a useful technique for understanding your Strengths and Weaknesses, and for identifying both the Opportunities open to you and the Threats you face.

> Strengths:

- ✓ Communication between people separated by distance (at home and within the workplace)
- \checkmark Working from home with ease
- ✓ Setting up an online business
- ✓ Gathering information (valuable asset in business)

> Weaknesses:

- New entrants underestimate levels of expertise needed to survive the market
- ✓ Large sums of money required to set up businesses
- ✓ Competition for small resellers
- ✓ Numerous pricing tariffs and service options

> **Opportunities:**

- ✓ Age structure of the population changing
- ✓ Number of households in the UK increasing
- ✓ Introduction of simpler tariffs
- ✓ Revision of regulatory framework

> Threats:

- ✓ The Economic Crisis Householders less likely to increase their Broadband subscriptions Stock Market's lack of confidence in the digital-communications market.
- ✓ It remains to be seen how far consumers can be persuaded to embrace Internet access.

2.5 Organizational Structure

Organizational Structure of Daffodil Online Ltd. Shown below in fig 2.5:

Figure 2.5: Organizational structure of Daffodil Online Limited

CHAPTER 3

Tasks, Projects and Activities

3.1 Daily Task and Activities

- Month 1: In the first month of internship on daffodil online limited I have learned and performed the following tasks:
 - Learning & understanding About Network Components.
 - Learning & understanding Basics of Linux.
 - Understanding Linux HDD Partitions.
 - Learning & understanding Linux Run Level.
 - Linux Installation.
- Month 2: In the second month of internship on daffodil online limited I have learned and performed the following tasks:
 - Basic Centos Commands.
 - Linux User and Password Management.
 - Know About logged in users.
 - File and Directory Accessing.
 - To Copy and Move File and Directories.
 - Compressed and Decompressed File and Directories.
 - Mount Unmount Drive.
- Month 3: In the third month of internship on daffodil online limited I have learned and performed the following tasks:
 - File and Directory Permissions.
 - Install, Update and Remove Package Using YUM.
 - Concept of IP Addressing.
 - Configuring IP Address in Centos.
- Month 4: The last month of internship on daffodil online limited I have learned and performed the following tasks:
 - Learning, understanding and configuring FTP Server.
 - Learning, understanding and configuring WEB Server.
 - Learning, understanding and configuring SAMBA Server.

3.2 Events and Activities

- Monitor and Maintain Computer Systems and Network.
- Setting up user accounts, permissions and passwords.
- Troubleshooting servers and routers.
- Troubleshooting local area networks and switches.
- Fixing network faults.
- Technical support for people using the network.
- Day to day admin and monitoring of network use.
- Suggesting IT solutions to business problems.
- Client Support over the phone or Physical move to client Ends.

3.3 Project Task and Activities

Centos Install

> 3.4 Creating Linux Partition

For Installation of Linux we have to create at least 3 partitions root (/), /boot, and swap.

• Root Partition: /

A Root Partition there is where "/" The root directory is located all files (except in /boot) are on the root partition. Minimum 5 GB HDD Space Required.

Boot Partition: /boot

The partition boot (100 MB): the partition mounted on /boot/ contains the operating system kernel (which allows your system to boot Linux), along with files used during the bootstrap process. Due to limitations, creating a native ext3 partition to hold these files is required. For most users, a 100 MB boot partition is sufficient.

Swap Partition: swap

The partitions swap is used to support virtual memory. In other words, data is written to a swap partition when there is not enough RAM to store the data your system is processing. Partition Swap should equal 2x physical RAM for up to 2 GB of physical RAM, and then an additional 1x physical RAM for any amount above 2 GB, but it cannot less than 32 MB [2].

3.5 Linux Run-Level Used by Centos

init 0 = Shut Down.

init 1 = Single User Mode.

init 2 = Multi User Mode.

init 3 = Full Multi User Mode.

init 4 = Unused.

init 5 = X-Window (GUI Mode)

init 6 =Reboot.

3.6 The Basic Command of Linux Centos

Shutdown = poweroff, init 0, shutdown –h now.

Reboot = reboot or init 6.

Logout = log the current user off the system.

Display a calendar = Cal, cal 2017, cal 28 1993

Display or change date or time = date.

Present Working Directory = pwd.

Create a blank file = touch rimon (File name).

Create a directory = mkdir rimon1 (directory name).

List information about file = ls rimon

Change Working Directory = cd /root/Desktop (directory path).

3.7 User Create and Password Management

Adding a user = useraddrimon(username).

Set a Password to New User = passwdrimon(username).

Password Disable/Remove = passwd -d rimon(username).

Delete a user = userdelrimon(username).

Delete a user with home directory = userdel -r helal(username).

3.8 To Know About the Logged In User

W

who

who am i

3.9 To Copy or Move a File

Copy = cp filename destination example: cp - r / daffodil / root / desktop

Move = mv filename destination example: mv /root/desktop/class1

3.10 Vi Editor

To Edit A File = vi rimon(file name)

To insert Text = press i

To delete the character = press dd

To copy line = press esc key and type 5yy to copy 5 line.

To paste = press p for paste.

To set line number = :set nu

To delete 3line number = 3dd

Search something = /abc for search abc

For Go top of the lines =:0

For Go bottom of the lines =:\$

For Go Specific Line = :50 to go 50 no line.

To save the document = :wq! {save the current changes and exits vi editor}

= :w! {save the current changes but does not exist vi editor}

= :q! {exits vi editor without saving any changes}

3.11 Install/Update/Remove Packages in Centos

• Install a package using yum install

Yum install (package name)

e.g. yum install vim -y

• Uninstall a package using yum

yum remove (package name)

e.g yum remove samba-y

• Update a package using yum

yum update (package name)

e.g yum update firefox

• Search a package using yum

yum search (package name)

e.g yum search firefox

Display Additional Information about a Package

yum info (package name)

e.g yum info firefox

• View All Available Package

yum list | less

View Already Installed Package

yum list installed

• List of all available software group

yum grouplist

• Install a specific soft group

yum groupinstalldnsnameserver

3.12 How to Add/Change/Delete and Display IP Address In Centos

To see ip address: ifconfig or ifconfig eth0 figure 3.1 shown below in ip address

B root@RimanulIslam:~	
[root@RimanulIslam ~]# ifconfig	
eth0 Link encap:Ethernet HWaddr 00:0C:29:91:3E:11 inet addr:192.168.0.225 Bcast:192.168.0.255 Mask:255.255.255.0 inet6 addr: fe80::20c:29ff:fe91:3e11/64 Scope:Link	
NT BROADCASI KONNING MOLIICASI MIC:1500 Metric:1 RX packets:46 errors:0 dropped:0 overruns:0 frame:0 TX packets:55 errors:0 dropped:0 overruns:0 carrier:0 collisions:0 txqueuelen:1000 RX bytes:6038 (5.8 KiB) TX bytes:7193 (7.0 KiB) Interrupt:19 Base address:0x2000	
<pre>lo Link encap:Local Loopback inet addr:127.0.0.1 Mask:255.0.0.0 inet6 addr: ::1/128 Scope:Host UP LOOPBACK RUNNING MTU:16436 Metric:1 RX packets:0 errors:0 dropped:0 overruns:0 frame:0 TX packets:0 errors:0 dropped:0 overruns:0 carrier:0 collisions:0 txqueuelen:0 RX bytes:0 (0.0 b) TX bytes:0 (0.0 b)</pre>	III.
[root@RimanulIslam ~]#	

Figure 3.1: IP address in centos

- permanently change the ip-address?
- ifconfig eth0 192.168.0.255/24

IP address amd Mac address I n command ifconfig eth0 by shown below figure 3.2

Figure 3.2: Address in eth0 port DEVICE=eth0 BOOTPROTO=static IPADDR=your_IP NETMASK=your_network_mask HWADDR=NIC_MAC_address NM_CONTROLLED=no ONBOOT=yes TYPE=Ethernet IPV6INIT=no

Setup IP Address permanently shown below by figure 3.3

Figure 3.3: Setup ip address in eth0 permanently

Edit IP address: vi/etc/sysconfig/network-scripts/ifctg-eth0 Shown below figure3.4

Figure 3.4: Edit IP address eth0 port

DEVICE=eth0 BOOTPROTO=static IPADDR=192.168.0.255 NETMASK=255.255.255.0 GATEWAY=192.168.0.1 HWADDR=00:25:90:81:5e:64 NM_COnTROLLED=no ONBOOT=yes TYPE=Ethernet

3.13 Server Configuration

In Internet Service Provider [ISP] the Server Configuration is very important purpose. Server Selection is important for each server services. Many servers contains in Linux Operating System. Within Those Servers DNS server, DHCP server, FTP server, NFS server, MAIL server, WEB server, SAMBA server, Nagios server Internet Service Provider [ISP] can be configured.

FTP Server

FTP (File Transfer Protocol)

The File Transfer Protocol (FTP) is a standard network protocol used for the transfer of computer files between a client and server on a computer network. FTP is built on client-server model architecture and uses separate control and data connections between the client and the server. Many casual Internet users expect to download directly from their web browser with https. FTP is still used to support legacy applications and workflows with very specific needs. If you have a choice of what protocol to use, consider exploring the more modern options. When you do need FTP, however, vsftpd (very secure FTP daemon) is an excellent choice. Optimized for security, performance, and stability, vsftpd offers strong protection against many security problems found in other FTP servers and is the default for many Linux distributions. We'll show you how to configure vsftpd to allow a user to upload files to his home directory using FTP with login identify secured by SSL/TLS [3].

Configuring FTP Server Step by Step

Package Name: VSFTPD

Default Port: 20 (To transfer the data),

21 (To make control connection).

Step 1: Intall the package vsftpd by using #yum intall vdftpd -y

Figure 3.5: Installing the package vsftpd

\$ cat <<EOF | sudo tee /etc/vsftpd/vsftpd.conf

listen=YES local_enable=YES xferlog_enable=YES connect_from_port_20=YES pam_service_name=vsftpd

Enable upload by local user. write_enable=YES

Enable read by anonymous user (without username and password).
anonymous_enable=YES
anon_root=/var/ftp
no_anon_password=YES
EOF

Step 2: Now Edit the Configuration file by using #vim /etc/vsftpd/vsftpd.conf

Figure 3.6: Configuration file location

How to Show Configuration File Location

Vim /etc/vsftpd/vsftpd.conf

Step 3: Go the line 12 and change the line anonymous Enable=Yes to No

Figure 3.7: Change the line anonymous Enable

I want to set up a FTP server on Centos OS 14.04 I have full access to the server and any tutorial I find online doesn't tell me exactly how to access it.

I am using VSFTPD because of many suggestions.

However it still doesn't quite answer the question of using an FTP for server access, as in it should allow anonymous people to download from it.

Any help would be appreciated

Step 4: Go to line 85 and 96 active the line by deleting #

Figure 3.8: Activating the line 85 and 96.

Step 5: Now Edit the Configuration file by using #vim /etc/sysconfig/iptables

Figure 3.9: Configuration file location.

Step 6: Now the Configuration and write those things.

Figure 3.10: Editing the Configuration.

Step 7: Now I have to write #adduser for FTP user and #passwd for password.

Figure 3.11: Creating Ftp User and Password.

Step 8: Now I have to open browser and given **ftp://192.168.0.225** and show this page.Here I have write user name and password.

?	ftp://192.168.0.225 is requesting your username and password
User Name:	rimanul
Password:	•••••

Figure 3.12: Screen print of a Name and Password.

Step 9: At last I have to press ok and show this result.

Figure 3.13: Screen print of a result.

WEB SERVER

The Apache HTTP server is a most popular web server across the entire World Wide Web. Apache server support Perl, Python, Tcl and PHP. Most popular authentication module like: cryptography (mod_ssl), proxy/gateway server (mod_proxy), URL rewriting mod_rewrite, filtering support (mod_include and mod_ext_filter) etc are supported by Apache HTTP server.

Virtual Hosts

Virtual hosts can serve more than one domain from on same Apache server. There are mainly two type of Apache Virtual host configuration-

- 1. IP based virtual host
- 2. Name based virtual host

IP Based Virtual Host-

In this type of configuration two websites (with different IP address) on the server have configured with two different IP address. The disadvantages of this technique that server needs a different IP address for every web sites. This increase administrative overhead.

Name Based Virtual Host-

Enables the virtual server to respond one or more alternate host names when used with name based virtual host. This allows a web-server hosting multiple sites using only one IP address to deliver the requested website [4].

Configuring Web Server Step By Step

Package Name: httpd

Default http port: 80

Default https port: 443

Step 1: At first install a httpd package by yum install- #yum install httpd -y

</dev>
</bodv>
/html>
```

Figure 3.16: Static Site Creating.

Step 4: Now use file location this command is #cd /etc/httpd/conf

Then vim configures file location and this command is #vim httpd.conf.

Figure 3.17: Screen Print of a vim configuration. ©Daffodil International University

Step 5: At last open browser and write http://192.168.0.225 and show my web page.

Figure 3.18: Web page result

SAMBA SERVER

Samba is the standard windows interoperability suite of programs for Linux and UNIX. Provides file and print sharing for windows clients from Linux servers. By supporting this protocol, Samba enables computers running UNIX to get in on the action, communicating with the same networking protocol as Microsoft Windows and appearing as another Windows system on the network from the perspective of a Windows client [5].

Why SAMBA?

In this system I implement SAMABA server to share printer and other important files to all clients like Windows, Linux& UNIX. I share a directory using SAMBA and add samba password to it. Using this directory any authorized user can share their data or print to other authorized users.

Configuring Samba Server Step By Step

Step 1: At first check ping google.com then installing package #yum insall samba

Samba client. Now package check this command **#rpm –qa | grep samba**.

🛃 root@RimanulIslam:~		I X
<pre>[root@RimanulIslam ~]# rpm -qa grep sa samba-winbind-3.6.23-45.el6_9.i686 samba-client-3.6.23-45.el6_9.i686 samba-common-3.6.23-45.el6_9.i686 samba-winbind-clients-3.6.23-45.el6_9.i6 samba-3.6.23-45.el6_9.i686 [root@RimanulIslam ~]# []</pre>	amba 586	

Figure 3.19: Installing samba package.

Step 2: Now packsge start #service smb start #service nmb start then status check

#service smb status #service nmb status then permanently on #chkconfig smb on

#chkconfig nmb on.

P root@RimanulIslam:~			x
[root@RimanulIslam ~]# service smb start			~
Starting SMB services:	I	OK	1
[root@RimanulIslam ~]# service nmb start			
Starting NMB services:	I	OK	1
[root@RimanulIslam ~]# service nmb status			
nmbd dead but pid file exists			
[root@RimanulIslam ~]# service smb status			(m)
smbd (pid 2173) is running			
[root@RimanulIslam ~]# service nmb status			
nmbd dead but pid file exists			
[root@RimanulIslam ~]# chkconfig smb on			=
[root@RimanulIslam ~]# chkconfig nmb on			
[root@RimanulIslam ~]#			
			-

Figure 3.20: Screen print of configuration result.

Step 3: Now add two users then one to read/write permission and other user to write

Permission.#useradd -s /sbin/nologin/harry then #useradd -s /sbin/nologin/sara

Then check SE linux enable or disable this command #getenforce.

Figure 3.21: User adds command.

Step 4: Now I write vim editor and the command is **#vim smb.conf** then go to line 74 and edit workgroup=WORKGROUP then go to line 80 remove (;) and write IP

Address like as 192.168.0.

Figure 3.22: Screen print of smb.conf.

Then Shift+G go to last line write the following command:

[RIMON] then path=/sharedir then valid users=harry,sara then read only=yes

Figure 3.23: Edit the smb.conf.

Step 5: Now #service smb restart then #service nmb restart and then go to my

Specify th	e drive letter for the connection and the fo	older that you want t	o connect to:
Drive:	Z: •		
Folder:	\\192.168.0.225\\harry	-	Browse
	Example: \\server\share		
	Reconnect at logon		
	Connect using different credentials		
	Connect to a Web site that you can us	e to store your docu	ments and pictures.

Computer clicks Map Network Drive. Then IP address then click to finish.

Figure 3.24: Screen print of Map Network Drive.

Then show this windows security then write user name and password.

ttempting to	o connect to \\19	02.168.0.225\\harry		
		Cancel	vant to connect to:	
Drive: Folder:	Z: \\192.168 Example: \ Reconn	Windows Security Enter Network Passy Enter your password to co	word nnect to: 192.168.0.225	23
	Connect to	harry ••••• Domain: I Reme	ROBIN-PC mber my credentials	

Figure 3.25: Screen print of windows security.

Step 6: Finally completed this step and show the samba driver

Figure 3.26: Screen print of samba Drive.

Nagios Server

Nagios is a free and open source computer software application that monitors system networks and entire IT infrastructure. Nagios monitors entire infrastructure to ensure systems servers, switches, applications, services and business processes are functioning properly.

Configuring Nagios server Step by Step

Step 1: At first check ping google.com then install the package #yum install httpd php gcc glibc glibc-common gd gd-devel make net-snmp –y

```
[root@nagios ~]# yum install httpd php gcc glibc glibc-common gd gd-devel make net-snmp -y
Loaded plugins: fastestmirror
Setting up Install Process
Loading mirror speeds from cached hostfile
* base: centos.excellmedia.net
* extras: centos.excellmedia.net
* updates: centos.excellmedia.net
                                                                      | 3.7 kB
                                                                                   00:00
base

Package 1:net-snmp-5.5-60.el6.x86_64 already installed and latest version
Nothing to do
[root@nagios ~]#
```

Step 2: Then add a user #useradd nagios and passwd nagios. Then groupadd nagcmd

```
[root@nagios ~]# useradd nagios
useradd: user 'nagios' already exists
[root@nagios ~]# passwd nagios
Changing password for user nagios.
New password:
BAD PASSWORD: it is based on a dictionary word
BAD PASSWORD: is too simple
Retype new password:
passwd: all authentication tokens updated successfully.
[root@nagios ~]#
```

Figure 3.28: Add a user and group.

Step 3: Then #usermod –G nagcmd nagios and usermod –G nagcmd apache.this configure is by default nagios and apache under the group.then check the configure #tail -2 /etc/group.

Step 4: Then yum install wget –y and #tar –xvf nagios-4.2.0.tar.gz then cd nagios-4.2.0 then #./configure --with-command-group=nagcmd then make all then yum install unzip –y then make install.

Step 5: Then make install-init, make install-commandmode, make install-config, make install-webconf then server for password create #htpassws –s –c /usr/local/nagios/etc/htpasswd.users nagiosadmin.then #service httpd restart.

```
*** Nagios/Apache conf file installed ***
[root@nagios nagios-4.2.0]# htpasswd -s -c /usr/local/nagios/etc/htpassw
New password:
Re-type new password verification error
[root@nagios nagios-4.2.0]# htpasswd -s -c /usr/local/nagios/etc/htpassw
New password:
Re-type new password:
Re-type new password:
Adding password for user nagiosadmin
[root@nagios nagios-4.2.0]# service httpd restart
Stopping httpd: [ OK ]
Starting httpd: [ OK ]
```

Figure 3.30: Restart apache for the setting.

Step 6: Then wget link and tar –xvf nagios-plugins-2.1.2.tar.gz then cd nagios-plugins-2.1.2 then #./configure --with-nagios-user=nagios –with-nagios-group=nagios then make then make install then cd.

Step 7: Then /usr/nagios/bin/nagios -v /usr/local/nagios/etc/nagios.cfg then service nagios restart then service httpd restart then service iptables stop. Then open a browser to access the nagios server.

Figure 3.31: Access the nagios server.

3.14 Challenges

No work has not challenges, but four months of my internship experience and to share friends after hearing about the happy hour, I've found that there is some common challenges intern. I think it is that interns three things: unpaid / under, temporary, and they are in a race to gain experience. Sometimes Not enough work: There's not enough work assigned to me. I'm bored, underutilized, strumming my fingers at my

desk and tempted to peruse Facebook.Too much work: Because interns are just glad to get a foot in the door, some work places may take advantage of young workers by giving them very long hours of dull repetitive work. Afraid to ask questions: All of a sudden there's an influx of work, and I finally have the chance to prove myself! But I'm not sure about x, y, z....I may feel the pressure to be an independent and selfsufficient worker, but it's so much better to clarify uncertainties! Compete with other Intern: Luckily I was an intern; we ask questions of each other and can easily team up with projects that have worked in teams where there was such a collaborative relationship. Interns in a future job opening, or a recommendation for a good letter will be competing in other office environments, may not be so friendly.

CHAPTER 4

Competencies and Smart Plan

4.1 Competencies Earned

Competencies Earned or learning outcome is a statement of what a learner is expected to know, understand or be able to do as a result of a learning process. Install and decommission of both network and server machines at two datacenters. Lead role in advanced Linux software implementations, for example LDAP HA, aligned to program learning outcomes, field and internship evaluations. The Student Association office funds many student Intern Learning Outcomes: Gathering and organizing information into a Internship Project Description: Participate in the redesign of the Linux Lab web site. Learning Outcomes. Install & Configure software and upgrades; Install, configure & test network Employer Services • Furthermore, consistent with the learning outcomes, the Internship On-Site Supervisor will provide an orientation concerning organizational policies and procedures.

4.2 Smart Plan

Every company should have a smart plan to gain the success. Basically some common things of combination create a smart plan.

4.3 Reflections

Daffodil Online Ltd. started they are operation in the year **2002**. During the past years, they extended they are operation and service portfolio according to the customer's recommendation and considering demands of time. They worked with many national projects and international organizations and achieved the reputation. They are using the latest technologies and upgrading the services wherever it is required. They are Corporate Network Solution department is capable to provide state-of-art network and telecommunication solutions with a highly efficient technical expertise group.

CHAPTER 5

Conclusion and Future Career

5.1 Discussion and Conclusion

Review this internship has been a wonderful and rewarding experience. I have seen the future and I will be able to help me with the opportunity to network with a lot of people have been able to confirm that. Through this internship, I have learned that one of the main issues and time management skills as well as self-motivation. When I first started I was eight hours a day, six days a week is going to be able to sit in an office and did not think that. Once I realized what I had to do my hours of overlapping is not broken, so I organize my day job. Organized and it was the right time, when I get a response prepared for questions that need to be learned. This internship and time management of the office for many hours, I had to learn how to motivate myself through. I'm still looking for using the company came up with the various proposals and ideas. I'm still keeping my options open to new opportunities, however, are continuing to work for the University of Bangladesh in the world. I'm enjoying this line of work. I continue to work hard for my position and hope to continue to learn about the industry and meet new people will. It was a wonderful experience, and I hope the other intern got a lot out of it.

5.2 Scope for Further Career

Career opportunities are available in different areas under Linux. The career opportunities in Linux's mentioning not only the Linux platform, it covers lot of different areas like: Desktop Application Development, Kernel & Device Drivers Development Today their huge demand open source software's and open source software's developers and network engineers. There many company today migrated to Linux and open source software's. The company like Google, Yahoo, Boeing, Lufthansa, wiki.org, many companies migrated to cost effective open source solution. There is a huge demand for the skilled professionals in LINUX.

Appendices

Appendix A: Internship Reflection

The primary goal of my internship in a professional setting, practical solutions to realworld problems is to apply the knowledge gained in the classroom. And professionally relevant competencies and relationships in a professional setting, learning to deal with new knowledge, skills, and the ability to determine how to sharpen and develop plans. Add to network with other professional's supervisors and professional relationships. To fulfill the duties of my internship, I'm exercising proper business etiquette. I am an organization's mission / vision is implemented, how to contact colleagues, how power is shared, how it is structured, how decisions are made, how to understand the culture of a professional organization, and what degree of accountability and feedback to the organization. With an assessment at the end of my internship supervisor and internship experience running through individual meetings provides an opportunity to take a professional opinion. Internship experiences to prepare for life in a global society, leadership and service, my gift to be able to put it to use.
